INTRODUCTION

Welcome to the *X-Men* Expansion for the *Marvel Multiverse Role-Playing Game!* This is the first in a long line of expansions for the game planned to be released over many years to come.

This book concentrates and expands on one of the most common kinds of super-powered people in the Marvel Multiverse: mutants. The book is titled after the most popular mutant team of all time—the X-Men—but it also covers their foes and many other mutant teams and individuals.

HOW TO USE THIS BOOK

It doesn't matter if you're a Narrator or a player—everyone is allowed to read this book. There are no secrets here that should be kept from players of any kind.

If you like, you can read this book cover to cover. Here's what you're getting into.

Mutants

Chapter 2: Mutants discusses what a mutant is in Marvel Multiverse terms. This includes details such as who they are, where they come from, how their powers develop and so on. It gives you an inside look into mutant society and how it came to be, from a humble school in Westchester, New York, to one of the most powerful nations on Earth.

This chapter also covers many events that have happened throughout Marvel history that centered around mutants or in which mutants played a key part. Marvel history often diverges from our own because of the actions of mutants.

X-Teams

Several chapters each focus on a particular mutant team or type of team affiliated with Professor X or mutant society at some point. Chapter 3 is the largest, and it features the original mutant team, the X-Men. The team has evolved from the original five heroes—Angel, Beast, Cyclops, Iceman and Marvel Girl, under the guidance of Professor X—to become the premier mutant team among several, so it deserves the spotlight.

Chapter 4 concentrates on X-Factor, a team that initially spun off from the X-Men to form a new group made of the original members.

Chapter 5 takes up X-Force. This team began as a more mature version of the New Mutants but soon became the X-Men's black-operations force, taking on the sort of deadly missions that other teams weren't able—or willing—to tackle.

Chapter 6 explores a broader subject: mutant schools. The X-Men started in one such place, but there have been a number of others over the years, including the Xavier Institute for Higher Learning, the Massachusetts Academy and so on. This covers the teams that sprang from such places too, such as the New Mutants, Generation X and the Hellions.

Chapter 7 tackles the Marauders, a group that started out as villains under the leadership of Mister Sinister. It's recently transformed into a team of mutant heroes, overseen by Kate Pryde, who set sail from Krakoa to help mutants both there and abroad.

Other Teams

Chapters 8-9 feature mutants on teams or in places that don't directly work as part of Professor X's society.

lichael Syrett (Order #53194700)

Art by Jack Kirby

Art by Gil Kane & Dave Cockrum

Chapter 8 doesn't go too far afield, showing the members of Alpha Flight, the Canadian super-hero team that once included Wolverine.

Chapter 9 takes up perhaps the most unusual team of mostly mutants: the Exiles. This group wanders through the Multiverse, setting things right and protecting universes that often don't even know they're in danger until it's far too late.

Other Worlds, Other Times

That makes for a nice segue into Chapter 10, which discusses many of the alternate worlds that mutants—and especially the X-Men—have appeared in over the years. This includes some that they've caused to come about themselves.

Often, though, the universe the characters are in doesn't change so much as people from other universes come to Earth-616 to change it. In many cases, these visitors hail from potential futures, even ones that are incompatible with one another. Chapter 11 covers many of these days of future past.

Vital Details

The last two chapters in the book put aside the histories, adventure hooks and so on and present all sorts of things you can use directly in your games.This includes new tags, traits, and new rules for vehicles, mental duels and narrative powers. On top of that, it offers new team maneuvers, new equipment and a detailed examination of the X-Men's famous training center, the Danger Room.

The book wraps up with Chapter 13, which features profiles for many of the mutants discussed in the other chapters. This should give you plenty of heroes to play and villains to battle in the best Marvel way.

THE DAWN OF THE ATOM

The X-Men are one of Professor X's greatest tools in his work to achieve his dream of establishing a society in which humans and mutants live together in harmony. As the number of mutants has grown over the years, the dream has evolved with them. Sometimes it feels so close, while other times it couldn't be further away.

Marvel's first team of mutants got their introduction in the pages of *X-Men #1* (Sept. 1963), drawn by Jack Kirby and written by Stan Lee, which pitted a whole new team of heroes against Magneto and, later, his Brotherhood of Evil Mutants. Tired of coming up with new origins for their characters, they decided to give all of the heroes on this team a common source for their superhuman powers: being mutants. This also allowed them a unified reason for having heroes who had developed any kind of powers at all.

While the X-Men eventually found millions of fans and became one of the best-known super-hero teams in the world, they had a much harder time in their early days. Due to flagging sales, the series was put on hiatus in 1970 and saw only reprints of earlier stories for the next four and a half years. Members of the team still guest-starred in other Marvel comics from time to time, but their own title remained moribund.

The New Team

That changed with the publication of *Giant-Size X-Men #1* (May 1975), written by Len Wein and drawn by Dave Cockrum. In the story, the original X-Men have been captured on the island of Krakoa, and only Cyclops has managed to escape. Professor X rounds up a new team of mutants hailing from all around the globe and sends them with Cyclops to rescue the others.

The next issue—*X-Men #94*—featured a new story starring these characters written by Chris Claremont, who took over the series for the next sixteen years. The mutants have been taking the world by storm—and often with Storm—ever since. Together, they've spawned countless spin-off titles, beloved animated and live-action shows and several blockbuster films.

It wasn't until issue #114 in October 1978 that *X-Men* changed its cover title to *Uncanny X-Men*, and they've stayed that way since. In 1991, the launch issue for a companion series—*X-Men #1* (Oct. 1991), written by Chris Claremont and drawn by Jim Lee—came out. It featured a foldout cover twice as wide as that of a regular wraparound comic: four whole panels. It became the best-selling comic book of all time, with more than eight million copies sold.

Over the years, Marvel's amazing mutants have fought foes of all stripes: aliens, villains and often among themselves. Their conflicts often represent the times in which they are written and the questions many people ask of society in real life, filtered through the lens of amazing action-packed adventures featuring a cast of characters that could fill several soap operas to overflowing.

They've gone back and forth in time. They've explored many different corners of the Multiverse. They've changed the world—worlds, really—for better and for worse.

The Nation of Krakoa

In recent years, Professor X and his former foe Magneto banded together to found a new mutant-only nation on the floating island of Krakoa, one that welcomed all mutants, no matter what crimes they'd committed in the past. This spurred all sorts of new stories, as the mutants took the spotlight not only among super heroes but on the world political stage.

Nothing lasts forever, of course—already mutants have experienced the fall of Krakoa and have moved on to a new status quo. Still, Professor X and his protégés keep working toward making his dream a reality, no matter how hard the challenges ahead of them may seem.

NARRATORS

While any sort of player can make great use out of this book, Narrators can do even more with it. They can take all kinds of elements from it and weave them into their game in ways that feel seamless, like it was all part of the plan from the start.

Take It Easy

If you're a Narrator, this book gives you a gigantic box of new toys to play with, in terms of characters, settings and rules. If you're a rookie Narrator with new players, don't try to dump them all out onto your gaming table at once. There's a lot to absorb, and it's much easier to introduce in small doses.

Start with opening up the new profiles to the players to use as their heroes. See which ones they gravitate toward playing, and that can tell you a lot about what kind of game they want to play.

If your players prefer to make their own heroes, encourage them to use the new rules Chapter 12 and explore how they best work together. Of course, you should do the same when coming up with characters of your own for them to work alongside or fight against.

All Mutants All the Time?

While this is an X-Men–themed book, that doesn't mean you must focus your game on the X-Men—or any other established mutant team, for that matter. The players can create their own team of mutants if they like, or they can be part of a team with mixed origins and see how well that functions with both mutant and traditional societies.

If you wish, of course, you can take the plunge and make your game all about mutants. The heroes can even join up with Professor X or Cyclops and try to become part of the official X-Men team. How far you want to lean in that direction is entirely up to you, but it's always a good idea to chat with your players about what they'd like to see.

Mix It Up

Even if the players aren't ready to leap into playing mutants, you can use plenty of the profiles and other tools in this book in your game. There's nothing that says the Avengers can't face off against the Brotherhood, or that X-Force can't wind up battling Mister Negative and his criminal organization. Odd mismatches like those can make classic elements seem fresh and new, especially if the players are longtime fans who might otherwise feel constrained by the stories they already know and love.

Marvel has featured plenty of stories over the years that pit teams of heroes against one another too. You can do the same by having your heroes face off against the X-Men, the New Mutants, the Marauders or any other team you like. Just because they're all heroes doesn't mean they can't have conflicting goals, and such battles can be just as pitched as those between good guys and bad.

The Mutant Multiverse

Once you've set up the heroes with the rest of the material, consider showing off the multiversal aspects of the game. That might mean visiting any of the variant worlds as a one-off adventure, or even launching the heroes into an ongoing series with them as the core of a new Exiles team.

There are so many different places to explore that you're unlikely to run out of options. Don't be afraid to come up with some of your own too. Maybe the heroes travel back in time to change things and discover that they've unintentionally created a whole new universe that springs from unexpected consequences of what they've done—and now it's up to them to fix it.

No matter how you handle such adventures—or the worlds where the game might take you—just remember this: As long as you and everyone else in your game are having fun, you're doing it right.

MUTANTS

Since the dawn of recorded history, humanity has always had mutants: people with super-powers due to the presence of the X-Gene in their DNA. In the past, such people tended to be both extremely powerful and exceedingly rare. In recent times, though, their numbers have grown exponentially, and they are now increasingly recognized as a subspecies of the human race.

Rather than *Homo sapiens*, mutants are known as *Homo superior*. The name indicates both their incredible powers and, some suggest, their destiny to someday replace regular humans as the dominant species on Earth.

THE X-GENE

The thing that sets mutants apart from the rest of humanity is the presence of the X-Gene in their DNA. In most cases, the gene causes the carrier to develop super-powers upon the onset of puberty. These powers can arise in almost any combination, although they often have some kind of theme for each individual.

Of all the origins for super-powers, being a mutant is the most common. It resides in the person's genes and requires no activation other than growing to the proper age. On Earth-616 at least, the X-Gene can be found in people of any kind, with no connection to their ethnicity or gender.

Mutant Identity

Some mutants don't even know that they are mutants. They simply develop and use their powers without any knowledge of their origin.

This happened more often in the past, but modern genetic testing makes it far easier to identify mutants. Also, devices like Cerebro can detect mutants at great distances the moment that their powers manifest.

In years past, many mutants hid their genetic status, fearing becoming the subject of overt bigotry and hostility. That has gradually changed over the years—often due to the efforts of the X-Men and similar groups—to the point that many mutants are open about their status. The establishment of Krakoa as a nation gave all mutants an official home as well—at least for as long as it lasted.

To this day, however, a number of super-powered people hide, ignore or generally refuse to openly acknowledge their status as mutants. This includes Namor (of Atlantis), Molly Hayes (of the Runaways) and Whirlwind.

Mutant-Likes

A number of other origins have roots similar to those of mutants. However, they differ in slight but important ways.

Deviants are perhaps the closest to mutants in that their powers derive from their genes and require no outside stimuli to activate. In fact, the similarities are so close at a genetic level that Deviants can pass through Krakoan gates, which are programmed to allow only mutants to pass through them.

Skrulls are similar as well, for the same reason. All Skrulls alive today are actually Deviant Skrulls, descendants of the originals created by the Celestials in ancient times. The Deviant Skrulls eventually drove the non-Deviant variety to extinction, a fate that anti-mutant bigots fear more than anything else.

Inhumans are similar to mutants in that their powers arise from a genetic difference. However, these powers

ichael Syrett (Order #53194700)

activate only if the Inhuman is exposed to Terrigen Mist. Otherwise, the genes—and the powers they produce—remain dormant.

Many other people with super-powers are classified as mutates—not mutants—of one kind or another. These people are born with genes that grant them super-powers if and when they are exposed to a particular kind of stimuli, much like the Inhumans, but without the society formed by the Inhuman people. This includes gamma mutates like the Hulk (Bruce Banner), She-Hulk, the Leader, Brawn and so on. When exposed to gamma radiation, they develop incredible powers rather than dying of radiation poisoning.

Other mutates include Captain America (Steve Rogers), Luke Cage, Spider-Man (Peter Parker), Spider-Man (Miles Morales) and the entirety of the Fantastic Four. These people all developed super-powers when exposed to things that otherwise might sicken or even kill other humans. Most of them fall under the Weird Science origin, as their development is rare enough that their origins are difficult, if not impossible, to reproduce. The missing component in attempts to replicate their powers is often their individual genetic anomalies.

Power Levels

Professor X and his contemporaries have a loosely defined classification system for mutant levels of power. Other groups—sometimes in other universes—have their own systems, but they're all meant to describe how powerful any particular mutant is with respect to others.

Even among the X-Men, these classifications have changed over time. In most cases, the classifications are:

- **Baseline:** Regular humans without any powers
- **Mutants:** People with the X-Gene
- **Omega-level mutants:** People with the X-Gene who have manifested the most amazingly strong powers of their kind

According to Professor X, an Omega-level mutant is "a mutant whose dominant power is deemed to register—or reach—an undefinable upper limit of that power's specific classification." Again, this is something that can change over time as circumstances demand. In game terms, the character is usually Rank 5 or 6 or even Rank X.

Secondary Mutations

On rare occasions, some mutants manifest an additional set of powers, often while undergoing a period of severe duress. Emma Frost is the primary example. She originally manifested telepathic powers, but she later developed the ability to turn her entire body into living diamond.

To date, these special mutants have not been classified as a different subspecies or a different kind of mutant. They are simply mutants who have manifested secondary mutations. No one knows if this is likely to become more common.

Mutant Demographics

Doctor Alia Gregor, an A.I.M. scientist, analyzed the growth of mutants as a percentage of the population. She hypothesized that mutants could never become the dominant species on Earth due to a number of mitigating factors. However, her analysis instead showed that the planet would become mutant-majority within roughly twenty years.

It's impossible to know if Gregor's predictions might prove accurate. However, they were enough to cause a secret multinational organization known as Orchis to form with the specific intention of preventing that eventuality. They have been attacking mutants on many fronts since and were the instigators behind the fall of Krakoa.

HISTORY

Mutants have been part of sentient life on Earth since its earliest days. One of the first known mutants—Firehair—lived over a million years ago and became the host for the Phoenix Force as well as the founder of a prehistoric predecessor of the Avengers. Later, when the Celestials arrived and created Earth's versions of the Eternals and the Deviants, they also imbued other locals with what would eventually become the X-Gene in humans.

The First Mutants

There have been several instances of mutant civilizations that predate recorded history. The first was Threshold, which prospered two billion years ago. One of the few survivors of that age was Okkara, the living island that was later split into Krakoa and Arakko.

The other developed on what became known as the Isle of Demons, and it featured two factions: the demonic Neyaphem and the angelic Cheyarafim. The Neyaphem and their leader, Azazel, wound up banished to the Brimstone Dimension.

In modern times, many mutants have laid claim to being the first of their kind. The two most likely are Selene, who claims to have been born 17,000 years ago, and Apocalypse, who was born 5,000 years ago in ancient Egypt. In any case, Apocalypse and his wife, Genesis, founded a mutant civilization on Okkara. Unfortunately, an army of demons from Amenth invaded and cut Okkara into Krakoa and Arakko. Genesis and her four children—the original Horsemen of Apocalypse—wound up trapped in Amenth, along with Arakko.

Apocalypse remained on Earth and set out to develop the planet's defenses for the eventual return of the demons. To that end, he wound up collecting other mutants and making them his Final Horsemen, ones who would take his place in the event of his death.

Modern Times

In the modern day, Professor X and Magneto emerged as the two greatest mutant leaders in the world. Due to his experiences during the Holocaust, Magneto believed that humans could not be reasoned with and that mutants had to establish a society apart from them. Professor X, on the other hand, advocated for finding a way for humans and mutants to live together peacefully and well.

Xavier began working toward his dream with the assistance of Moira MacTaggert and Karl Lykos, who later left them for the Savage Land, where he became the villain Sauron. Xavier and MacTaggert continued without him, putting their efforts into training young mutants in the use of their powers and in being excellent examples of their kind to the world.

Michael Syrett (Order - 5319-1700)

Coincidentally, both Xavier and MacTaggert separately had children who were gifted with Omega-level powers that allowed them to shape reality. In both cases, though, the children proved to be unstable at an early age. MacTaggert's son Kevin became Proteus, an energy-hungry mutant with the power to possess others. Xavier's son, David Haller, became known as Legion, and his reality-warping abilities so traumatized him that he developed dissociative identity disorder, with each of his thousands of alter egos having their own set of powers.

Later, while Xavier was remodeling the upstate New York estate that had been in his family for generations, a visitor from the future arrived, a man he would later know as Cable. That visitor helped upgrade the place with futuristic technology in exchange for being taught about the workings of the present day.

The X-Men

Not long after, Xavier opened his School for Gifted Youngsters. There, he trained the first class of X-Men in secret, while also educating them in traditional ways. At the same time, Magneto assembled his Brotherhood of Evil Mutants to inform humanity that mutants would not tolerate their interference. The two sides clashed constantly over the years, but eventually, Professor X and Magneto decided that their efforts would be most effective if they worked together.

As the X-Men grew in size and the group's members matured, Xavier continued to bring new classes of mutants into the school. The earliest of these became a team called the New Mutants. Later, when the New Mutants became established veterans, they began a new team called X-Force, which was led by Cable, who had returned from the future. At that point, another team known as Generation X began at the school, continuing the cycle.

The mutants following Professor X's dream accomplished amazing things, saving the world and even the galaxy many times over. They also suffered horrible losses, most notably when they believed that Jean Grey had become the Dark Phoenix and allowed herself to be killed to keep the rest of the universe safe.

Changeups and Spin-Offs

The main X-Men team became large enough that other teams split off from it. At a crucial point, Xavier left the X-Men for a while to be with the alien Shi'ar princess Lilandra, and Magneto—long the X-Men's oldest enemy—joined the team to take his place. When that happened, the original five members of the team left and formed a new group of supposed mutant hunters called X-Factor. This included a returned Jean Grey, who turned out to have been secreted away and replaced by the Phoenix Force instead of being corrupted by it. Rather than turning their captive mutants over to the authorities, though, the members of X-Factor took care of them and trained them in the use of their powers, much in the way that Xavier had done for them.

While Grey had been presumed dead, Cyclops had begun a relationship with Madelyne Pryor, who later turned out to be a clone of Grey created by Mister Sinister. They conceived a child destined to become a powerful mutant—Cable—and his birth awakened the ancient mutant known as Apocalypse from his slumber.

At another point when it seemed that many of the X-Men were dead, the survivors joined with Captain Britain to form a new team called Excalibur, which set out on adventures throughout the Multiverse. They did so from a multiversal nexus known as Otherworld.

The X-Men helped to put an end to the Inferno unleashed on Earth after Madelyne Pryor became involved with the demonic forces of limbo. They also had to deal with a surge of hatred against mutants fomented by the Shadow King. On top of that, several of them were captured and put on trial on the island-nation of Genosha, where they were sentenced to death—a fate they managed to escape.

M-Day

One of the most devastating moments in the history of mutants happened when the Scarlet Witch had a mental breakdown and nearly destroyed the Avengers. While the X-Men and the Avengers debated her fate, the Scarlet Witch's brother, Quicksilver, convinced her to use her reality-warping chaos magic to remake the world as one in which mutants ruled the world, and making their supposed father—Magneto—their leader.

The House of M (Earth-58163) did not stand for long before the world returned to normal. At the moment she undid her work, however, a distraught Scarlet Witch uttered the words "No more mutants," and with her magic, she also removed the powers from 99% of the world's mutants.

This reduced the Earth's mutant population from two million to about two hundred. It also kept people with a latent X-Gene from activating it and gaining powers. Several prominent mutants lost their powers, and it seemed that mutants might soon become extinct.

The Decimation—as it was sometimes called—reawakened Apocalypse, who mounted a new campaign to destroy 99% of the human population to even things out for the mutants. M-Day also reawakened Vulcan and Darwin, who revealed that they had been part of the first rescue mission to save the original X-Men from Krakoa. Vulcan left soon after to take his revenge on the Shi'ar Empire, where he later declared himself their new emperor.

The Phoenix Force Returns

Mutants later banded together to fight the Avengers when the Phoenix Force returned to Earth in search of a new host. Iron Man (Tony Stark) attacked the Phoenix Force, shattering it, and it gave a portion of its power to five different mutants. In the end, though, the power of the Phoenix Force wound up being wielded by Cyclops.

The Phoenix Five

- Colossus (Piotr Rasputin)
- Cyclops (Scott Summers)
- Emma Frost
- Magik (Illyana Rasputina)
- Namor the Sub-Mariner

While corrupted by the full power of the Phoenix, Cyclops killed Professor X, who was trying to stop him. Eventually, the Scarlet Witch managed to remove the Phoenix Force and shatter it further. The energies wound up repowering many mutants for the first time since M-Day.

In reaction to these events and to help combat hatred against mutants, the Avengers formed the Avengers Unity Squad, which featured mutants as core members of the team. As part of that, they made Havok the leader of the squad.

The Founding of Krakoa

Sometime later, Professor X located Krakoa, which had been shot into space but had returned to Earth as a floating island in the Pacific. With help from Cypher and Warlock, he established communications with the island and persuaded it to become the foundation of a new nation dedicated to the

Michael Syrett (Order - 5319-1700)

world's mutant population. All mutants were automatically made citizens and welcome there.

Krakoa began to grow plants from which could be made medicines to heal most ailments, and the Krakoan government made these available to the world as a gesture of goodwill from the new nation. The medicines were distributed throughout the world via the newly created Hellfire Trading Company, overseen by a new team of Marauders.

While ostensibly working to guard the shipping efforts of the Hellfire Trading Company, the Marauders actually traveled across Earth and beyond to help mutants not living on Krakoa. Team members came and went, but the leader of the effort was Kate Pryde, captain of a ship known as the *Marauder*.

The mutant island also grew teleportation gates that permitted only mutants to pass through them. They were matched up with gates grown all around the world, giving mutants the ability to travel anywhere on the planet instantaneously. In addition, all mutants who passed through them were automatically and instantly taught the new mutant language—called Krakoan—so they could all communicate with one another without need of translation.

Krakoa extended itself over time, forming an archipelago of locations connected via Krakoan gates. While its largest section remained in the Pacific, it also had territory in the Atlantic and elsewhere around the world—even on Mars and the Blue Area of the Moon. This included the island of Mykines in the Faroe Islands where the spectacular annual Hellfire Galas were hosted.

To govern this new nation, Xavier established a Quiet Council and recruited powerful mutants to become its first members. They set up three laws of Krakoa:

- Do not harm humans.
- Respect the sacred land of Krakoa itself.
- Make more mutants.

The punishment for the most severe infractions involved being thrown into a part of Krakoa known as the Pit of Exile, where the prisoners were conscious but trapped and unable to harm any others. Sabretooth was the first mutant to face this punishment.

The implementation of the laws was up to the interpretation of the Quiet Council.

At the founding of Krakoa as a nation, the Quiet Council declared a general amnesty for all mutants. It did not matter what crimes a mutant might have committed before that time or in what other nation. Only the laws of Krakoa mattered now, and the Quiet Council refused all requests for extradition.

Xavier also set up Arbor Magna, the Krakoan resurrection chamber, which was run by a circuit of mutants known as the Five. They were able to create a clone of any known mutant, accelerate it to the proper age and implant its latest stored memories into it, essentially restoring any slain mutant to life with their full powers intact.

The Five

- Egg
- Elixir
- Hope Summers
- Proteus
- Tempus

Egg created the basis for the cloning gestation: an egg that can have DNA injected into it from Mister Sinister's massive catalog of mutant DNA. Proteus then used his reality-warping powers to transform the egg into something that can grow into a clone. Elixir then jump-started the process of cellular replication—essentially giving the egg life. Tempus accelerated the egg's maturation process, bringing the clone to the proper age. Hope Summers unified the team and coordinated their powers. A telepath then copied the subject's memories into the clone from a copy of them made by Cerebro and stored in a gigantic database that Forge built to secure them.

In this way, the Five could produce clones rapidly, restoring to life any mutant for whom they had the data. Some vital mutants were able to jump to the front of the line at the request of the Quiet Council. While the work could go quickly if necessary, there were many thousands of mutants to restore to life, and the Five did not manage to get to them all.

To keep the peace, the Quiet Council also appointed battle-ready leaders called the Great Captains of Krakoa. Each of them had a particular remit for which they were responsible. While they were mostly considered equals, a captain commander was appointed to officially lead them all.

The Rise of Arakko

In the early days of the Krakoan nation, mutant heroes traveled to Amenth and managed to free both Krakoa's sister island of Arakko and the Arakki mutants living upon it. Then, during the first Hellfire Gala, the mutants terraformed Mars, transforming it into a habitable planet to which they transferred the island and its inhabitants, making it their new home. The Quiet Council renamed Mars as Arakko, declared it the new solar capital and made Storm the official representative of the solar system to the Galactic Council.

The mutants from Amenth formed the bulk of the residents of Arakko, and they had their own form of government, which they brought with them. Like the people of Krakoa, they had three laws, although theirs were slightly different.

- Make more mutants.
- Destroy our enemies.
- Defend this broken land.

Their government was called the Great Ring. It was divided into three main sections—Dawn, Day and Dusk—each of which had three members. There were also three members of a Night section, but they were kept hidden from the public. To gain a seat on the Great Ring, a candidate had to defeat the current holder in a duel in the great arena known as the Circle Perilous.

The Fall of Krakoa

The transformation of Mars into Arakko put the Krakoans at odds with a billionaire megalomaniac named Feilong, as well as with Orchis, a new organization dedicated to the destruction of mutants. Together—and with the help of allies like Moira MacTaggert and Sebastian Shaw—they orchestrated the fall of the great nation during the third Hellfire Gala.

With the loyalties of many of the most powerful members of the Quiet Council in doubt due to the fact that Mister Sinister had possibly manipulated the DNA used in their resurrections, Krakoa's most vicious foes launched a coordinated attack. It began with a devastating assault on the third Hellfire Gala by the newly invented ultimate Sentinel, Nimrod.

Orchis and Doctor Stasis revealed that they had altered the Krakoan medicines that had been supplied to the rest of the world. By activating a trigger, they could kill anyone who relied on the drugs. They threatened to start the process and blame it all on Krakoa unless Professor X took mental control of every mutant on Earth and marched them through a gate. Unable to see any way out of this dilemma, he complied. Afterward, though, he could not detect the transported mutants anywhere, and he feared that he'd been complicit in marching them all to their deaths.

Michael Syrett (Order - 5319-1700)

Michael Syrell (Order - 53194700)

Some of the X-Men survived the attack, and they rallied to put an end to Orchis, Feilong and Doctor Stasis' awful plans. Afterward, they had to contend with a world in which they had lost their nation and the power that went with it.

LOCATIONS

Mutants occur naturally all over the world, but over the years, they have congregated in a few particular places.

Genosha

This island-nation off the eastern coast of Africa, north of Madagascar, grew in power by enslaving its mutants. Magneto later ruled it as a mutant homeland, but an invasion of Sentinels under the control of Cassandra Nova destroyed it, killing almost the entire population.

Utopia

The X-Men built this mutant homeland in San Francisco Bay from the remains of Magneto's space-station headquarters, Asteroid M, and declared it a sovereign nation. It was later destroyed by a gigantic Sentinel.

Mutant Town

Also known as District X, Mutant Town was a mutant ghetto formed in the Alphabet City neighborhood of lower Manhattan. It dissolved almost completely after the depowering of most mutants on M-Day, but it remains welcoming to most mutants.

Krakoa

The living island of Krakoa became the worldwide homeland of Earth-born mutants, ushering in a golden age for mutants in which they had unprecedented wealth, fame and power. Orchis recently orchestrated the downfall of the nation, although Krakoa itself still survives.

OPPONENTS

While each mutant team has particular foes they struggle against, there are a few organizations that strive against mutants in general. These often vary in name, resources and methods, but they all have one goal in common: oppressing mutant rights.

Sentinels

Doctor Bolivar Trask developed this line of robots to detect, detain and—if necessary—destroy mutants. He began with a Sentinel named Master Mold, a creature capable of building other Sentinels to support its mission. While Trask later came to regret his actions, his creations went on without him and have plagued mutants around the world ever since.

Over time, Sentinels have evolved into some of the greatest threats to face mutants and even the rest of humanity. This includes Omega Sentinel (the founder of Orchis) and Nimrod.

Friends of Humanity

Anti-mutant-rights crusader Graydon Creed founded and led this terrorist group dedicated to repressing mutants throughout the United States. They often agitate for the passage of a Mutant Registration Act to force mutants to register and be tracked by the federal government. Although they often wind up facing off against mutants directly, they sometimes plague other super heroes they view as mutant sympathizers.

Purifiers

Anti-mutant preacher William Stryker founded this paramilitary group to turn his incendiary words into actions. During the times Stryker has been imprisoned and even thought dead, the Purifiers have gone on without him, attacking mutants at crucial points at which they believe they can do the most damage.

Orchis

Founded by Omega Sentinel, Orchis exists to ensure that mutants never attain supremacy over humanity. The organization recruited its members from several governmental and criminal groups, including S.H.I.E.L.D., S.T.R.I.K.E., S.W.O.R.D., A.I.M. and Hydra, not to mention from national intelligence agencies around the planet. They managed to create the advanced Sentinel known as Nimrod—future versions of which would plague mutants for years—and they helped orchestrate the fall of Krakoa.

The leadership of Orchis includes:

- **Director:** Doctor Killian Devo (cyborg)
- Doctor Alia Gregor (whose research predicted mutant supremacy)
- Doctor Stasis (a clone-twin of Mister Sinister, but with a club on his forehead)
- Feilong (billionaire genius)
- Judas Traveller (telepath)
- M.O.D.O.K.
- Moira MacTaggert

PLAYING MUTANTS

Playing a mutant means that your character instantly becomes a member of one of the most notorious groups of super-powered people on the planet. Many people have strong feelings about mutants and the effect they've had on the world, and they aren't particularly shy about sharing their opinions with others.

Being a mutant doesn't mean that the character is part of the X-Men, though, or any other team associated with Professor X, Magneto or any other prominent mutant leader. It just means that they have powers that they have to learn how to master—and then decide what to do with them.

Mutant Outreach

The moment a character manifests powers as a mutant, Cerebro might be able to detect them. During the Krakoan age, representatives of the mutant nation would often reach out to the young mutant and offer them a home on the island. While the new mutant was under no pressure to accept, they always knew they had a seemingly safe place on Krakoa, which sometimes stood in stark contrast to the way they might be treated in their hometown.

Not everyone was ready to leave home, though, especially at such a young age. Since, for the most part, only mutants were allowed to reside on the island-nation, doing so meant leaving their families behind. This didn't mean that they

Michael Syrett (Order - 5319-1700)

couldn't ever see their loved ones again, but they would no longer be living at home. At times, their parents sent them away anyhow, hoping that they would be safer on Krakoa.

The X-Men usually lacked the resources to make contact with every mutant that they might detect. Instead, they contacted only mutants who either reached out to them or found themselves in distress, often at the hands of their neighbors.

If a player wants to start with a mutant character at the moment their powers first manifest, that makes for a fine adventure story. They can often be recruited into one kind of training school or another, and if they are both good and lucky, they might find themselves as a member of the X-Men or one of the other premier mutant teams. It's all right, though, to skip that part and play a character who is an adult in full mastery of their powers.

While the X-Men and their affiliated teams are often the main source of training mutants in the responsible use of their powers—as well as how to interact with an often fearful public—others sometimes step in to fill that gap. Emma Frost ran the Massachusetts Academy for years, training young mutants to become members of the Hellions instead.

In the current day, most people are well aware of where they can turn to for help if they discover that they're a mutant. However, there are always less scrupulous people waiting in the shadows to take advantage of those who don't make that connection.

Hunted and Feared

Most mutants form teams or join established schools as a form of protection. Many people fear mutants as a group, and it's not uncommon for angry mobs to track them down and put an end to them as soon as anything happens for which the mutant could be blamed.

Mutants who don't or can't find protection with Professor X and his associates often turn to anyone else who might take them in. Sometimes they have to hide until they can find others—or be found.

In New York City, this is how the Morlocks formed. Mutants who were clearly not regular humans fled into the tunnels beneath Manhattan to hide, where they gradually found one another and formed a tight-knit society. This was replicated by other groups of mutants in Chicago and abroad. Later, many mutants gathered in the Alphabet City neighborhood of Manhattan, pushed together to form a sort of ghetto known as Mutant Town.

In most cases, these places lasted for only so long until they were destroyed. The same thing happened with Genosha and Utopia when they were declared mutant homelands. Krakoa recently met a similar fate.

Mutants make an easy scapegoat for politicians to blame for many problems, and this often culminates in them either directly or indirectly inciting mobs—or even governmental organizations—to attack them. This happens over and over again, and in a number of possible futures, mutants are rounded up into camps for eventual extermination. It's a horrifying story that the people of the present hope to prevent.

Working with Other Heroes

Just because a character is a mutant doesn't mean they have to be a part of mutant society, much less a member of the X-Men or any of its spin-off teams. Many mutants live quiet lives and never bother anyone. Not all mutants have the kind of powers that are useful for super-hero teams, and some of them simply would like to be left alone.

Others just don't want to join Professor X's cause. They want to live like other super-powered people without mutant origins. They become part of other teams—even the Avengers—and do amazing work there instead.

Unfortunately, that doesn't mean these heroes can escape the bigotry that others have toward mutants. It's rare to see such prejudice on a super-powered team, since the other members have abilities of their own, albeit from other sources. The public opinions about them, though, are another matter.

Mistaken for a Mutant

While a character might know that their powers come from another source than the X-Gene, others might not believe them. Some people accuse anyone with super-powers of secretly being a mutant. That character can sometimes feel the full weight of the bigotry that mutants face.

Cerebro knows the truth, though, and genetic testing can put such rumors to rest. Still, in an age of misinformation, many people refuse to believe such details unless they come from a source that they trust.

In fact, some mutants do deny being mutants, claiming that their powers originate from someplace else. Those who became citizens of Krakoa dropped any pretense, though, declaring to the world that they were mutants so they could enjoy the privileges that came with being Krakoan.

After Krakoa's fall, some of them have come to regret that.

THE X-MEN

While mutants have been a part of the Marvel Multiverse since time immemorial, the X-Men are a relatively new invention. Charles Xavier formed the first team from students enrolled at a school he created specifically to train young mutants in the use of their powers for the betterment of humanity. Over the years, other teams sprang from that relatively humble beginning, including X-Factor, X-Force, the New Mutants and many more.

In the years since their uncanny debut, the X-Men have remained the premier team of heroic mutants, though their lineup has evolved drastically on several occasions. The team has even fractured a few times, but in the end they've always reunited to help foster Xavier's dream of mutants and humans living together in peace.

TEAM HISTORY

When Charles Xavier founded Xavier's School for Gifted Youngsters, he knew that he would one day gather a team of mutants that would represent the best that mutants had to offer humanity, and he planned to call them the X-Men.

While Xavier was attending Oxford University, he met a young geneticist named Moira Kinross (later Moira Kinross MacTaggert), who revealed that she was also a mutant, one with the ability to restart a timeline upon her death. She had already been through nine lives when she approached him with the idea of founding the school from which the X-Men would spring, and she allowed him to read her mind as proof of her powers and experiences.

With her help, Xavier embarked on a plan to find young mutants and teach them how to handle their powers. He also hoped to mold them into decent people who would use their abilities to aid others and show the world how peaceful and helpful mutants could be.

As part of Xavier's preparations for opening his school, he designed the Danger Room: a training facility that would prepare the X-Men to function as a team in battle. He also began locating young mutants who would make up his first class of heroes in training. When both they and he were ready, the school opened its doors.

The First Class

The first X-Men team consisted of five teenaged members:

Original X-Men

- Angel (Warren Worthington III)
- Beast (Henry McCoy)
- Cyclops (Scott Summers)
- Iceman (Bobby Drake)
- Marvel Girl (Jean Grey)

Xavier served as both their teacher and their leader, although he soon made Cyclops the team's battlefield commander. Xavier trained them relentlessly, encouraging them to work together and literally grading them on their efforts.

The X-Men first revealed themselves to the public when they confronted a new mutant menace who threatened to take over a military base: Magneto. While Magneto was more powerful than any individual on the team, together, they managed to defeat him, at least temporarily.

ichael Syrett (Order #53194700)

In response, Magneto formed his own team to face off against the X-Men: the Brotherhood of Evil Mutants. The X-Men defeated them, but the Brotherhood had already done enough damage by causing a large portion of the public to view all mutants as evil, whether they were villains or not.

The lineup of the X-Men often shifted in these early days. Heroes like Banshee and Mimic joined the team temporarily and left. Changeling joined the team and died while impersonating an absent Professor X, making the others believe their leader had been killed. Havok and Polaris became steadfast members of the team.

The X-Men worked with other heroes, including Spider-Man, the Fantastic Four and the Avengers, and through their efforts saved the world many times. After one such incident, Professor X lay dying, having used every last bit of his energy to stop an interplanetary invasion by an alien race called the Z'Nox. The X-Men chased down the man who had devised a cure for the professor: Bruce Banner, otherwise known as the Hulk. To retrieve the cure, they had to face off against the U.S. military, who were also chasing the Hulk. Although the X-Men saved Xavier's life, they had to go into hiding for years after.

During these "hidden years," Iceman left the team, and Beast joined the Avengers full-time. The remaining six worked in secret, right up until the day that Xavier sent them to find a mutant supposedly hiding on the island of Krakoa.

The All-New X-Men

The island of Krakoa itself turned out to be the mutant the X-Men were searching for, and it captured them all. Desperate, Xavier turned to MacTaggert to ask her students to mount a rescue mission. They agreed.

Rescue Team

- Darwin (Armando Muñoz)
- Petra
- Sway (Suzanne Chan)
- Vulcan (Gabriel Summers)

Michael Syrett (Order - 5319-1700)

Krakoa seemingly killed the entire rescue team, although Cyclops managed to escape. When he returned, Xavier erased the rescue attempt from Cyclops' mind and set to forming an all-new team of X-Men with Cyclops as their leader. This time, he went farther afield, bringing in more experienced mutants from around the world.

New X-Men

- Banshee (Sean Cassidy)
- Colossus (Piotr Rasputin)
- Cyclops (Scott Summers)
- Nightcrawler (Kurt Wagner)
- Storm (Ororo Munroe)
- Sunfire (Shiro Yoshida)
- Thunderbird (John Proudstar)
- Wolverine (Logan)

Working together, the two teams of X-Men escaped and shot the entire island of Krakoa into outer space. After returning to their headquarters, only Cyclops remained to lead the new team, while the others left to recover and lead their own lives. Sunfire left the team as well, and Thunderbird died in action soon after, leaving the team with a core of six members.

Jean Grey later rejoined the team and shortly after sacrificed herself to save the others. She was reborn moments later as the Phoenix. At the deceptive urging of the Hellfire Club and their mind-controlling member Mastermind (Jason Wyngarde), the power of the Phoenix Force eventually corrupted Grey to the point that she destroyed an entire planet. Soon after, as Dark Phoenix, she arranged for her death to put an end to the danger she posed to the galaxy.

In the following years, the X-Men added many new members to their roster, including Kate "Kitty" Pryde and Rogue. Askani (Rachel Summers)—a daughter of Cyclops and Jean Grey from the alternate future of Earth-811—joined them as well.

The X-Men became embroiled with the alien Shi'ar Empire, which was ruled over by Lilandra Neramani, who fell in love with Xavier. In the course of their interstellar adventures, they met the Starjammers, a group of spacefaring pirates led by Corsair, a man who turned out to be the father of Cyclops, Havok and Vulcan.

Closer to home, they discovered a community of outcast mutants known as the Morlocks living in tunnels beneath Manhattan. They were led by a woman named Callisto until Storm defeated her in combat, making her their new leader. The Morlocks refused to leave their subterranean home, and eventually Mister Sinister's team of Marauders slaughtered them in an incident known as the Mutant Massacre.

Spin-Off Teams

Xavier continued to bring new classes of mutants into the school. The earliest became the New Mutants. Later, when the New Mutants became veterans, they formed X-Force, a new team led by Cable. Another team known as Generation X began at the school, continuing the cycle.

The main X-Men team became large enough that other teams split from it. At a crucial point, Xavier left the X-Men, and Magneto—their oldest enemy—took his place. When that happened, the original five members left and formed X-Factor. At another point when it seemed that many of the X-Men were dead, the survivors joined with Captain Britain to form a new team called Excalibur.

During this time, Madelyne Pryor helped unleash a demonic invasion on Earth. The X-Men also had to deal with a surge of hatred against mutants fomented by the Shadow King. On top of that, several of them were captured and sentenced to death on the island nation of Genosha. They survived all of this and grew their numbers as they went, incorporating new friends like Rogue, Gambit, Jubilee, Psylocke, Dazzler and Forge.

Blue and Gold

The members of X-Factor eventually rejoined the X-Men, but the merged group was so large that they divided it into two strike teams: X-Men Blue (led by Cyclops) and X-Men Gold (led by Storm).

Blue Team

- Beast (Henry McCoy)
- Cyclops (Scott Summers)
- Gambit (Remy LeBeau)
- Psylocke (Betsy Braddock)
- Rogue (Anna Marie)
- Wolverine (Logan)

Gold Team

- Archangel (Warren Worthington III)
- Colossus (Piotr Rasputin)
- Iceman (Bobby Drake)
- Jean Grey
- Storm (Ororo Munroe)

Other X-Men worked with the teams according to their own wishes or each team's needs. The core members trained with each other, though, making themselves into finely tuned squads. The teams joined forces against Magneto and his Acolytes on their space-station headquarters, Asteroid M.

The Gold Team dealt with the Hellfire Club again. During this adventure, they met Bishop, who had traveled back from a possible future (Earth-1191) in which most of the X-Men had been killed and the rest of mutantkind had been rounded up into concentration camps. Meanwhile, the Blue Team faced off against Mojo, who kidnapped some of the X-Men to force them to star in a TV show in Mojoworld to boost his ratings.

During this time, the X-Men faced one of their worst threats: the Legacy virus, a form of the Techno-Organic virus that could be fatal to mutants. Stryfe—an alternate version of Cable—tricked Mister Sinister into releasing it. After the disease killed his sister, Magik, Colossus sacrificed his life to bring a cure to the rest of the world and ensure no one else would die from it. He was restored to life not long after, though, and new versions of the virus continued to crop up.

In the aftermath, Magneto waged war on humanity, and the X-Men united to stop him. In the end, Xavier had to telepathically shut down his old friend's brain.

Michael Syrell (Order - 53194700)

Xavier's troubled but Omega-level mutant son Legion traveled into the past to kill Magneto. That caused Apocalypse to accelerate his plans in that new timeline, bringing the world into an Age of Apocalypse (Earth-295).

After that was repaired, Onslaught tried to destroy the world. It turned out that he was a psionic construct forged from Magneto's thirst for vengeance combined with Xavier's guilt over rendering Magneto catatonic. The Fantastic Four and the Avengers came to help and wound up being trapped in a pocket dimension for a full year before they found their way back.

The New and X-Treme X-Men

A new era began for the X-Men with the arrival of Cassandra Nova, a twin sister of Professor X who had somehow survived dying in the womb. She engineered the destruction of Genosha—which Magneto had converted into a mutant nation—at the steely hands of an army of fresh-built Sentinels. The robots killed over sixteen million people.

Emma Frost survived the destruction due to a timely secondary mutation that allowed her to turn her body into living diamond. She soon became a member of the X-Men, despite having plagued them for years as the White Queen of the Hellfire Club.

Even before this, Storm decided to found a team of X-Treme X-Men that was entirely separate from Xavier and his ideals. They used the diaries of the precognitive mutant Destiny to locate and put an end to threats around the world.

X-Treme X-Men

- Beast (Henry McCoy)
- Bishop (Lucas Bishop)
- Psylocke (Betsy Braddock)
- Rogue (Anna Marie)
- Sage (Tessa)
- Storm (Ororo Munroe)
- Thunderbird (Neal Shaara)

After the X-Men captured Nova, she secretly swapped bodies with Xavier, shot her original body (which he was in) and then (posing as Xavier) revealed to the world that Charles Xavier was a mutant and the leader of the X-Men, something he had taken great pains to keep secret to that point. With their identities now widely known, the X-Men took on a far more public stance with their advocacy for mutants. This included the foundation of the X-Corporation and the installation of multiple satellite offices.

In Xavier's body, Nova left Earth to conquer the Shi'ar Empire and bring them back to invade Earth. Fortunately, Xavier managed to reclaim his body and put a stop to her plans, but Nova had already done a tremendous amount of damage to the reputations of Xavier and the rest of the X-Men.

During this time, new mutants like Xorn, Quentin Quire and Fantomex joined the X-Men, and Emma Frost took over as the leader of the Xavier Institute for a while, bringing her young clones, known as the Stepford Cuckoos, with her.

Decimation Days

After M-Day, a catastrophic event that depowered or killed a vast number of mutants, several X-Men lost their powers, and it seemed that mutants might soon become extinct. This reawakened Apocalypse, who mounted a new campaign to destroy 99% of the human population. Fortunately, the X-Men put an end to his plot.

M-Day also reawakened Vulcan and Darwin, who revealed that they had been part of the first rescue mission to save the original X-Men from Krakoa. Vulcan left soon after to take his revenge on the Shi'ar Empire and later declared himself their new emperor.

Abigail Brand of S.W.O.R.D. later gathered the greatly reduced X-Men to help stop an invasion from Breakworld. As a final blow, Breakworld fired a moon-sized bullet at Earth. Kitty Pryde managed to phase the entire bullet as it passed through the planet, but she was stuck inside it as it continued on into open space.

Messiahs and Utopias

When the first mutant baby after M-Day was born, both the X-Men and Mister Sinister and his Marauders tried to find her. Cable beat them all to the punch, taking the baby with him for her own safety. Bishop—whose timeline came about when the baby killed a million people—betrayed the X-Men and tried to kill the baby instead.

The Marauders took the baby from Bishop before he could manage that, and eventually the X-Men recovered her. Cyclops gave her back to Cable so he could take her into the future and raise her someplace safe from the troubles of the day. Bishop made a last-ditch attempt to kill her but shot Professor X dead instead.

Cyclops disbanded the X-Men then, but he and Emma Frost later restarted the team on the outskirts of San Francisco, where they found the people far more welcoming. Angel used his family fortune to build a new headquarters known as Graymalkin Industries.

After the superhuman civil war, the situation in San Francisco deteriorated, and Cyclops moved the X-Men's headquarters to the remains of Asteroid M, which had become an island after crashing in San Francisco Bay. There the X-Men founded a new nation called Utopia.

Not long after, the immortal villain Selene resurrected the murdered mutants of Genosha—now calling the island nation Necrosha—and attacked Utopia. Warpath (the brother of Thunderbird) and the rest of the X-Men barely managed to stop her from ascending to godhood.

Cable returned with the baby, now a teenager named Hope Summers. They appeared at the Xavier estate and had to make their way to Utopia, battling through William Stryker's team of Purifiers. At the last moment, Hope's mutant powers emerged, allowing her to save the day—but not before Cable made the ultimate sacrifice.

The Schism

Kade Kilgore, the new leader of the Hellfire Club, orchestrated public sentiment against the X-Men, leading to an assault on Utopia by an international team of Sentinels. Cyclops and Wolverine came to blows over whether they should stand their ground or leave. When the crisis was over, Wolverine returned to the Xavier estate to establish the Jean Grey School for Higher Learning, while Cyclops remained on Utopia. All of the X-Men and their students were forced to decide which place to call home.

Cyclops formed the Extinction Team, which included Danger (the Danger Room's A.I. come to life) and Colossus, who had recently been awarded Juggernaut's powers by the ancient god Cyttorak. They faced some of the most powerful threats in the universe, sometimes working alongside the Avengers.

Extinction Team

- Colossus (Piotr Rasputin, with Juggernaut's powers)
- Cyclops (Scott Summers)
- Danger
- Hope Summers
- Namor the Sub-Mariner (Namor McKenzie)
- Psylocke (Betsy Braddock)
- Storm (Ororo Munroe)

Meanwhile, Wolverine rebuilt the school at the Xavier estate, and the Hellfire Club planted on the grounds a descendant of Krakoa who they had tortured relentlessly, believing the creature would destroy the place. Instead, after Quentin Quire treated it kindly for the first time in its life, it took to protecting the staff and students there.

Wolverine's Team

- Askani (Rachel Summers)
- Beast (Henry McCoy)
- Husk (Paige Guthrie)
- Iceman (Bobby Drake)
- Kate "Kitty" Pryde
- Wolverine (Logan)

The rift between the two factions of X-Men grew wider, and in an effort to mend fences, Beast went back in time to find the original five members of the X-Men and brought them to the present. While he hoped this would inspire the older counterparts to remember how they had once been like

Michael Syrett (Order - 5319-1700)

family, the younger counterparts instead stayed in the present, horrified by what would happen to them.

The original five wound up splitting between Cyclops' and Wolverine's factions.

Matters came to a head when the Phoenix Force returned to search for a new host. After being shattered into pieces during a battle with the Avengers, it found five hosts to share its power. In the end, Cyclops defeated the others and claimed the full power for himself, but as he did, he killed Professor X and became the Dark Phoenix.

The Scarlet Witch and Hope brought him down, after which Hope became the new Phoenix. Instead of claiming the power, though, she used it to restore power to the mutants who had been depowered on M-Day. After escaping from prison, Cyclops started the New Charles Xavier School for Mutants in an old Weapon X facility in Canada, in an attempt to make up for his actions.

After the death of Wolverine (Logan), Cyclops closed down his school and returned to the Xavier estate once again. Not long after, he tried to help stop the end of the Seventh Cosmos at the height of what became known as the Secret Wars. He failed, but he was reborn—along with most of the Multiverse—in the Eighth Cosmos.

New Beginnings

The X-Men went to war with the Inhumans after the latter released gigantic clouds of Terrigen Mist. While these were meant to unlock the powers of people with latent Inhuman genes, the clouds also proved poisonous to those with the X-Gene. Cyclops was apparently killed in the final battle, which put an end to the threat.

The X-Men broke up after that, but Storm re-formed them under her leadership. While building the team, she recruited Jean Grey from the past and also a Wolverine from an apocalyptic future (Earth-21923). To keep themselves and their students safe, they relocated to limbo, where Magik could protect them. They called their headquarters X-Haven.

Storm's X-Men

- Colossus (Piotr Rasputin)
- Forge
- Iceman (Bobby Drake)
- Jean Grey (past)
- Magik (Illyana Rasputin)
- Storm (Ororo Munroe)
- Wolverine (Old Man Logan)

Eventually, Storm passed leadership of the school over to Kate Pryde, who moved it from limbo to Central Park. While there, they had to deal with the takeover of the United States by a Hydra-controlled version of Captain America. This brought most of the X-Men back together to help defeat Hydra.

Not long after, a younger version of Cable came to the present and shot his older self, who was protecting the original X-Men. He turned out to be trying to protect them from Ahab, a villain who had decided to murder them all.

The original five went back to the past, leaving their older counterparts to defeat Ahab. The original five's memories were suppressed until they reached the present.

The Age of Krakoa

When the mutant nation of Krakoa was established and many mutants resurrected, members of the X-Men were elected by a general vote by the entire populace. This election was held yearly at the Hellfire Gala, a lavish and stylish celebration of Krakoa and its independence. Votes were cast and collated telepathically and announced before the end of the event.

The X-Men's new headquarters was the Treehouse, a Krakoan-grown structure designed with the help of Forge and located in Central Park.

First Krakoan X-Men

- Cyclops
- Jean Grey
- Polaris
- Rogue
- Sunfire
- Synch
- Wolverine (Laura Kinney)

Unfortunately, this golden age for the X-Men did not last. After the fall of Krakoa, they were scattered across the globe. Despite suffering such a terrible setback, Xavier's battered dream survived, now in the form of three new teams using the name X-Men with different takes on how to move forward.

Rogue leads the new public-facing team out of New Orleans, dedicated to healing relations between mutants and the rest of humanity. Cyclops operates a strike team that moves in secret to help achieve those aims. At the same time, Kate Pryde concentrates on locating, saving and training young mutants.

LOCATIONS

The X-Men always have a headquarters from which they operate.

The X-Men's goals generally demand that they have headquarters, or at the very least, they need a relatively safe and stable place in which they can house and educate young mutants. They also need a training facility and a place from which they can mount various kinds of missions.

For X-Men who have secret identities—which was common at the team's founding but not so much anymore—having access to top-line medical facilities is also important. While they can use local hospitals in a pinch, it's much easier to maintain their privacy if they can make it back to their headquarters instead.

The X-Men often allow other teams to work out of their headquarters. Many times those teams don't have the same needs and goals as the X-Men, but if the team is composed of mutants, its members often call the headquarters their home too. That's especially true if some of the members of that team are also—or at least have been—members of the X-Men.

The Xavier Estate

This massive estate has been in the Xavier family for generations. It's situated in Salem Center, Westchester County, New York, which puts it roughly 50 miles north of Central Park in Midtown Manhattan.

While this is a great location for classic X-Men adventures to start, it did not see much use after the founding of Krakoa.

ichael Syrett (Order - 53194700)

The Outback

For a while, the X-Men stayed in a remote part of the Australian Outback in an effort to get as far away from prying eyes as possible. A group of cyborg villains known as the Reavers had established an amazingly high-tech headquarters there, and the X-Men kicked them out with the help of Gateway, a mutant who could teleport the team anywhere in the world and who had been trapped under the Reavers' control.

While the X-Men made good use of the place, they earned the long-standing enmity of the Reavers. They also couldn't get anywhere quickly without Gateway. While he was normally available and happy to help, living in such a remote location made them feel cut off from the rest of the world. They later returned to the Xavier estate.

San Francisco

When the X-Men saved the life of the mayor of San Francisco, she offered them the chance to relocate to the area. Angel used his fortune to build a new headquarters known as Graymalkin Industries—named after the road on which the Xavier estate sits—and the locals were far more accepting of the mutants than people had been anywhere else.

Here the X-Men felt they were part of a community for the first time. Despite that, tensions rose with the mayor when conflicts with the X-Men's enemies spilled over into the rest of the city. When Cyclops and the mayor realized that neither was willing to compromise their own community's safety for the other, the X-Men departed.

Asteroid M/Utopia

At one early point, Magneto set up a space station as a refuge for mutants wishing to escape persecution. Most of these people formed a group called the Acolytes, led by Magneto's greatest mutant admirer, Fabian Cortez. The space station proved to be too tempting a target for Earth's militaries, which tried to shoot it down.

The X-Men helped evacuate the asteroid while rescuing some of their own who were held captive on it. In the end, Asteroid M crash-landed in San Francisco Bay.

This proved to be fortuitous when the X-Men needed to abandon their Graymalkin Industries headquarters. They relocated to Asteroid M, refitted it and declared it a sovereign nation.

During a period when Magneto was in charge of Utopia, he arranged for Namor to build a subaquatic city beneath the floating asteroid.

Limbo

During a time when Magik was a vital part of the X-Men's leadership—and she ruled the hellish realm of limbo (also known as Otherplace, and not to be confused with the temporal Limbo)—she moved the mansion from Xavier's estate to that terrible place. Just as when the X-Men relocated to the Outback, it offered them the kind of security they could not find anywhere else. Few people from Earth had the means to follow them to limbo, and few of the residents there would have dared to challenge Magik's rule.

But as with the Outback headquarters, the limbo base made the X-Men reliant on people like Magik who could teleport in and out of the place at will. Without such folks on hand, the rest of them would be trapped.

Central Park

After taking over the X-Men, Kate Pryde decided that the time for hiding in limbo was over. She had Magik move the mansion from limbo to Manhattan's Central Park. The building became the Xavier Institute for Mutant Education and Outreach, serving to help rebuild human-mutant relations in ways that were impossible from another dimension.

Krakoa

When the time was right, Professor X took steps to set up the restored floating island of Krakoa as a mutant-only nation. This proved to be the X-Men's largest headquarters by far, and the use of Krakoan gates—which could transport mutants instantaneously to any connected gate—expanded their influence even farther.

Large parts of Krakoa are undeveloped and relatively unspoiled. The governing body known as the Quiet Council goes to great lengths to work in concert with Krakoa at all times. In many ways, the mutants are guests here, and Krakoa is their host. Without the island's goodwill, they would have tremendous troubles.

Treehouse

The Treehouse is the X-Men's official headquarters in New York City. It's located in Central Park in an area now known as Seneca Gardens. Krakoa and Forge designed and grew the place in conjunction, and it has nearly everything a modern super-hero team could require.

It's also the only headquarters that is open to the public. There's a Krakoan gate in it, and any mutant is free to make use of it at any time.

Summer House

With the help of Krakoa, the X-Men also constructed a home in the Blue Area of the Moon, which features Earthlike gravity and atmosphere. It's called the Summer House, and it's mostly used by the three Summers brothers, their family and guests. Cyclops (Scott Summers) makes the most use of it, although Havok (Alex Summers) is often there too. Even Vulcan (Gabriel Summers) lived there—until his personality became unbalanced again and he fled.

OPPONENTS

The X-Men have stood up to countless threats over the years, which means they've also made countless enemies. While the public's opinion of them might wax or wane, some foes are forever.

That said, many of the X-Men's greatest opponents become their most important allies when the occasion presents itself. Sometimes that happens because they have a common foe, and other times it's because they come to some kind of agreement, even if only temporarily.

Magneto

The man the world knows as Magneto has been a friend and foe of Charles Xavier since the X-Men were merely an idea. Professor X generally advocates for finding a way for humans and mutants to live together in peace and prosperity, and to that end, he helps train young mutants to be their best selves when it comes to their powers and their behavior.

Michael Syrett (Order - 5319-1700)

Magneto, on the other hand, has little trust in the goodness of humanity. At best, he believes that mutants should be allowed to live on their own without being bothered. At his worst points, he feels that mutants should get rid of any obstacles in their way, no matter the cost in lives.

As the two men have grown older, they've become more understanding of each other's points of view. In the Krakoan era, Magneto is one of Professor X's greatest partners in their grand experiment.

The Hellfire Club

The Hellfire Club has pitted itself against the X-Men since the days of the original Dark Phoenix saga. Ostensibly the Hellfire Club is a private club for entrepreneurs and other captains of industry, but the inner circle is composed of mutants who use their powers for profit, often at the ruthless expense of others.

The leaders of the Hellfire Club often have titles that correspond to chess pieces. Sebastian Shaw, who has long been in charge, calls himself the Black King. Emma Frost is, by contrast, the White Queen.

For many years, Frost ran a competing school for young mutants called the Massachusetts Academy, and she called her team from that school the Hellions. While she's long since given up that position and devoted herself to the X-Men instead, she remains affiliated with Shaw because of their long association.

In the Krakoan era, Frost's respect for Shaw's business acumen and portfolio of investments earned him a seat on the Quiet Council. True to form, though, Shaw eventually betrayed Krakoa in favor of personal power.

Senator Robert Kelly

Senator Kelly was a long-standing legislative thorn in the X-Men's side. He often and loudly railed against the dangers that mutants posed to society, and he called for laws that would restrict their rights. In some timelines, his assassination causes the public to rally to his cause, rounding up mutants for concentration camps.

While Kelly is long gone in the Krakoan era, other prejudiced politicians have stepped into his place, and not just in the United States but all over the globe. Mutants make an easy target for such people, who are willing to condemn others for political gain.

Sentinels

The Sentinels were created by Bolivar Trask as a means of finding and capturing mutants for the safety of society. However, when they turned against him, he helped the X-Men stop them, sacrificing his own life to make up for his mistake.

Despite this, countless others have continued to create and improve upon Trask's original Sentinels. Over time, this has even led to villains like Nimrod, a super-powerful Sentinel from the future, and Bastion, who is a combination of Nimrod and the original Sentinel, Master Mold.

Many different governmental organizations have turned to Sentinels in an effort to protect their nations against mutants. Recently, technology from Stark Industries has been incorporated into Sentinels, creating gigantic robotic versions of Iron Man.

Mister Sinister

Nathaniel Essex has been plaguing mutants for well over a century. He has become one of the leading geneticists in the world, and his command of cloning technology is unparalleled. He owes his success to being a sociopath with absolutely no compunction about risking the lives of everyone around him to further his studies.

Mister Sinister loves to dress flamboyantly and draw attention to himself, but he abhors the idea of getting into direct fights. He prefers to manipulate people behind the scenes. He enjoys earning the trust of those around him so he can abuse them at will.

For a long time, Mister Sinister labored under the command of Apocalypse, and he worked long and hard to remove himself from the ancient mutant's influence. To this end, he created a clone of Jean Grey—Madelyne Pryor—and manipulated Cyclops into falling in love with her so she would have a baby who could grow up to be Cable, a mutant so powerful that Mister Sinister believed he could destroy Apocalypse.

While Mister Sinister long ago freed himself from Apocalypse's influence, this only released him to work up his own plans for ruling over all of reality. He has a seemingly endless number of these. One of the latest included making clones of Moira MacTaggert so he could use her mutant power to restart a timeline, enabling him to conduct wild experiments that he could reset whenever he needed.

Essex has cloned himself countless times, so much that even his clones cannot agree on which version of him is the original—or if that person even still lives. Mister Sinister wears a red diamond on his forehead, like one found on a playing card.

A clone called Doctor Stasis wears a black club on his forehead, which he often covers with a full mask. He works with Orchis to undermine mutants by medical means.

The clone Orbis Stellaris wears a black spade on his forehead, and he's indulged a great deal in cybernetic implants. He prefers to use such technology in his work.

Another clone known as Mother Righteous wears a red heart on her forehead, and of the most successful clones, she's the only one who was not created from Essex but from his long-ago wife, Rebecca. She uses magic to forward her ends.

Orchis

There have been all sorts of anti-mutant organizations over the years. They uniformly wish to take power away from mutants. Some of them do so simply out of prejudice and hatred, while others wish to push aside mutants to make way for their own plans.

The most recent and successful of these organizations is Orchis. It was inspired by a white paper written by an A.I.M. researcher who noted that mutants could become the dominant form of humanity within a generation. Agents from various governmental agencies—both inside the U.S. and out—joined together to form a new organization dedicated to keeping that from happening. A fair number of them hailed from terrorist organizations like Hydra as well.

Orchis was behind the formation of technologies that, in the future, will lead to the creation of Nimrod. In the present, they helped orchestrate the horrible betrayal of Krakoa that culminated in the nation's fall. To this end, they had help from Sebastian Shaw and Mister Sinister, each of whom betrayed the mutants for their own ends.

PLAYING THE X-MEN

It's one thing to know who the X-Men are, and it's something else entirely to play one. While the information in this chapter gives a great deal of context for the team and its long history, this section deals with what it means to play a member of the X-Men in a game.

Theme

The X-Men have had countless writers and artists tackle their stories over the years, but one unifying theme underlies most if not all of those tales. A special people—united more by their genetics than their culture or behavior—are persecuted by others for who they are.

This persecution is based on prejudice about something these people cannot change about themselves. It's part of who they are—who they were born to be. They can try to hide it from a public who fears them, but they cannot change who they inherently are.

To stand against this prejudice, mutants must band together in an effort to prove that they mean no harm and, in fact, want to use their talents to make a better world for themselves and everyone else in it.

This is Charles Xavier's dream: to establish peaceful and beneficial coexistence between his people and the whole of humanity. He's tried this from many different angles, and he's suffered many failures and achieved many triumphs. No matter what happens, though, he never stops trying.

Xavier's views on how to achieve his lofty goal have evolved over the years. In the early days, he focused on

Michael Syrett (Order - 5319-1700)

Art by Alan Davis, Mark Farmer & Javier Rodriguez

recruiting and education. He picked his first class carefully and worked with them closely.

In modern times, Xavier has been more about nation-building as a means of safeguarding rights for his people. He still has the same aims, but his methods are more ambitious. On top of that, his many years of concerted efforts mean that he now has a small army of X-Men—both current members and former—whose assistance he can rely on.

In many ways, the X-Men still feel like "us against the world," but the *us* has come to encompass far more people than ever before.

Style

Despite the team's lofty goals, the X-Men have always been a bit rougher in practice. Sometimes a *lot* rougher. At their heart, they're a big, messy family. They care about one another, even if they don't always *like* one another.

Even from the dawn of the team, its earliest members conflicted sharply with one another. Their banter and arguments sometimes escalated into fistfights and full-on brawls. When training young mutants to be confident and competent both in the world and on the battlefield, this perhaps shouldn't be a surprise.

These issues only became worse with the introduction of the multinational members who made up the bulk of the team that rescued the originals from Krakoa. Few if any of the newcomers had much experience working as part of a team. Wolverine (Logan) was the only notable exception, having been a member of Weapon X and Alpha Flight, but he was hardly a shining example of a good teammate.

As the team has grown, shattered and been reborn over the years, so have their internal conflicts. Even in the X-Men's happiest, most peaceful moments, there are often underlying

ichael Syrett (Order - 53194700)

tensions. Regardless, they generally stand united against outside dangers. They don't tolerate threats against their teammates, even the ones they otherwise can't stand.

Each of the X-Men believes in Xavier's dream. That's why they joined up in the first place. It's just that they don't always agree on how to march toward it.

Purpose

Beyond reaching Xavier's dream, the X-Men have always had several important goals.

- To locate mutants and ensure their safety.
- To educate young mutants in the responsible use of their powers.
- To serve as an example of the best sort of people that mutants can be.

They don't always live up to these ideals, but they consistently strive for them. Anyone joining their team is expected to do the same.

Transportation

The X-Men generally keep their headquarters in isolated places, far from prying eyes. This helps keep them safe not only from their enemies but from the public as well. For many years, the true nature of Xavier's School for Gifted Youngsters was kept a secret from the world. After its nature as a school for mutants was made public, the fact that it sat on an isolated estate surrounded by acres of undeveloped land helped the X-Men maintain as much privacy as they could manage.

The trouble with living far from the center of things is that the team needed fast and reliable means of transportation to get to where the situation demanded. In the early days, the X-Men used Professor X's private jet to get around. Later, they employed the *Blackbird*, a supersonic stealth transport that could get them anywhere in the world as fast as humanly possible.

Later still, the X-Men came to rely on mutants with teleportation powers, like Gateway and Manifold, who had the ability to move entire groups of people at once. While this instantaneous transport was far faster than even the *Blackbird* could manage, it meant that the X-Men depended heavily on those mutants. If the teleporters were hurt, killed or otherwise indisposed, the others could find themselves stranded a long way from home.

The eventual solution was the development of Krakoan gateways. These incredible portals—which are grown from special Krakoan flowers—allow a person to walk through them and appear someplace else entirely.

The Blackbird

The X-Men have had several versions of the *Blackbird* over the years. Sometimes they have more than one at a time. They usually call them all the *Blackbird* or an X-Jet. Other times such jets have specialized paint jobs and names, but you can use the information here for them either way.

The *Blackbird* is a supersonic jet fitted with advanced Shi'ar technology that makes it passively invisible to radar. It can also be made actively invisible to the visible spectrum and all adjacent spectra (such as infrared).

The *Blackbird* can travel roughly 6,000 miles on a single fueling. It can surpass Mach 2 at sea level and Mach 4 at higher altitudes, and it can reach past the stratosphere.

While most *Blackbirds* forego weapons for speed, some have used missiles and lasers.

Blackbirds are often fitted with a portable version of Cerebro, which is used to find mutants. The jets are spacious enough to carry dozens of people and/or up to ten tons of cargo.

Krakoan Gateways

Krakoan gateways are created with a set of twinned flowers. Once planted, each flower grows quickly to a full and functional plant in a matter of minutes. They form a vertical circular portal large enough that any creature big-sized or smaller can move through them easily. Larger creatures cannot move through standard-sized Krakoan gateways.

A shimmering light of glowing blue appears inside the circle, allowing people to see through it to the other side as if looking through a tinted window. When a person enters one side of a gateway, they appear on the other side of the twinned gateway instantly, regardless of the distance.

Krakoa monitors all of the gateways created from its flowers. Normally, it lets only mutants through. Non-mutants are not permitted to use a gateway unless accompanied by a mutant. Krakoa can alter the gateways to allow anyone to use them, although it usually does so only at the request of the Quiet Council.

If a Krakoan gateway is destroyed, the shimmering field inside its twin vanishes and no longer functions. If the destroyed gateway is somehow healed or repaired, the pair could be made to work again, but most times, the plants are discarded and replaced instead.

For some unknown reason, Kate Pryde cannot use the gates. When necessary, she uses other means to travel to and from Krakoa.

When a mutant passes through a Krakoan gateway for the first time and emerges on the island, Krakoa instantly teaches them Krakoan, the official language of the nation and thus the mutant people. Krakoa developed the language with the help of Cypher.

Deviants—human-based ones, at least—are able to pass unaccompanied through the gateways as well. They are genetically close enough to mutants for Krakoa to allow this.

JOINING THE X-MEN

If the player's character has ever been part of the X-Men, they're already in. Otherwise, this section explains how they can join the team.

Requirements

First, the character should have the Mutant origin. The team has made exceptions for non-mutants, but for the most part they stick to mutants (or to heroes deeply associated with them). A character might try to fool the X-Men's leaders on this point, but given the skills of Professor X and the use of Cerebro, that would be difficult to manage.

Should such a deception ever be discovered, the character is removed from the team immediately. In addition, Professor X or another telepath may edit the character's memories to remove any secrets the X-Men don't want them to retain.

The X-Men is one of the premier teams of mutants in the world. The character must be at least Rank 3 to join.

Michael Syrett (Order - 5319-1700)

Getting In

In addition to the preceding requirements, the character must convince others that they would make a good addition to the team. In many time periods, this means having Professor X, Cyclops, Storm or even Magneto admit the character.

During the Krakoan era, the X-Men are elected to the team by telepathically submitted and tallied votes during the Hellfire Gala. The number of open spots on the team is determined by the Quiet Council. To be eligible, a character must either nominate themself or accept someone else's nomination of them.

This is a wonderful opportunity for the player to engage in role-playing by approaching other mutants on Krakoa and asking for their vote. A recommendation from a current member of the team, a member of the Quiet Council or one of the Great Captains of Krakoa can go a long way toward locking in those votes.

Character Alterations

Once a character becomes part of the X-Men, they should add that fact to their character sheet under Teams. They now can take part in team maneuvers with other X-Men, even ones they haven't personally trained with before. (See the the mutant team maneuvers in Chapter 12: New Rules.)

Depending on the situation, the character might consider taking the trait Famous. In the Krakoan era, the roster of the X-Men is known around the world. If the character wasn't famous before, they likely will be soon. If necessary, the Narrator should allow the character to trade out another trait to make room for this one.

Chances are good that if the character has a secret identity, that's over. Most of the X-Men have public identities. In fact, some Krakoan mutants have even changed their regular name to their codename, making them one and the same.

Powers and Roles

If a character joins the X-Men, the Narrator should think about what kind of role they play and whether anyone else on the team duplicates that space. This can be a matter of powers, skills or both.

For instance, an X-Men team usually works best with a single leader. Too many leaders can cause friction, especially if they rarely agree.

As a practical matter, the Narrator should shuffle such duplicates off the team when possible. Perhaps the current team member sticks around long enough for the new one to learn the ropes, but when they see that they're redundant, they depart on their own to find someplace they can be more useful and valued.

Training Up

If the character isn't at least Rank 3, they shouldn't start as a full-time member of the X-Men. Instead, they can be part of a junior team—like the New Mutants were when they began—until they've gained enough rank to keep up with the rest of the main team.

ichael Syrett (Order - 53194700)

Art by Mike Mayhew & Rain Beredo

Meanwhile, the character can take part in X-Men missions in which their particular powers or skills are in demand, at least on a temporary basis. Once they rise in rank, they can be made full members.

Duties

While being part of the X-Men is a huge accomplishment, one that many mutants would be proud of, it comes with duties as well. The character is expected to train—both alone and with the rest of the team—and to be available on a moment's notice to be sent on missions. Characters who aren't up for such responsibilities shouldn't join, as they are unlikely to last long.

The same goes for characters who are unwilling to take orders from the team's leader. The X-Men place a huge emphasis on teamwork, and poor teammates can be asked to learn better or leave.

Public Perception

The X-Men are one of the most famous super-hero teams in the world, perhaps surpassed only by the Avengers. People study them, and news organizations spend a great deal of time discussing them. For good or ill, the X-Men are considered the public face of mutants everywhere.

That's a lot to live up to, and not everyone is suited for the task. It can be a challenge to have your every action—your every word—analyzed for what it means for mutants and the rest of the world. Characters should take great care with this responsibility while trying not to let it overwhelm them. They've been given a tremendous platform that offers them the opportunity to do a great deal of good—if they can manage it.

X-MEN ADVENTURE HOOKS

Sometimes a Narrator needs a little inspiration to help put an adventure together. Here are a number of adventure hooks to get things started.

Players might want to skip this section entirely, but there's likely no harm in peeking. After all, these hooks are only the starting premises for adventures. Where the game goes from there is entirely up to the Narrator—and the players too!

General Hooks

Here are ten adventure hooks for the X-Men in many of the team's incarnations.

- Someone with the power to stop bullets and push around cars with their mind is committing crimes in Manhattan. Is it Magneto? Polaris? Someone else with command over magnetism? Or perhaps it's a telepath using telekinesis to throw off suspicion?
- A group of mutants has started meeting in the tunnels where the Morlocks were murdered during the Mutant Massacre. Are they looking to honor the dead, or are they planning revenge on a city that never wanted them there in the first place?

Michael Syrett (Order - 5319-1700)

- A new super hero is coming to the aid of mutants facing angry mobs, showing up even before the X-Men arrive. It turns out that they're doing so as an audition to join the X-Men—but they're not a mutant. How might they react if they don't get in? And did they incite the mobs in the first place?
- Duplicates of the heroes are running around New York City committing crimes. Are they clones created by Mister Sinister? Skrulls? Variants from another universe? Life-Model Decoys directed by a shadowy government agency? No matter the truth, the heroes need to do something before their reputations are destroyed forever.
- Someone has convinced Cerebro that everyone with a cell phone is a mutant, rendering the machine useless for finding actual mutants. The heroes must find the hackers and not only stop them but figure out how to reverse the damage.
- Professor X is assassinated while making a speech about mutant rights at the United Nations. The moment he dies, he turns into a Skrull. Is this the start of a new secret invasion, or was this Skrull impersonating Xavier at his request? And where is the real Professor X?
- Destiny announces to the X-Men that the heroes will wind up destroying the planet unless they leave for another dimension right now. Do they leave as requested, or do they refuse to go? How can they prove her wrong—or at least find out when it's safe to come back?
- Someone has released a virus that turns regular people into mutants, but many of them don't survive the process. The heroes need to figure out how to contain this virus and eradicate all stockpiles of it before it becomes an epidemic.
- Mutants are being attacked on the streets of New York and drained of all their blood. Has Dracula mounted an offensive against the X-Men? Is someone using the blood to synthesize Mutant Growth Hormone?
- A weakened and shattered version of the Phoenix Force arrives after being ejected from another dimension. It magnifies the powers of all mutants, amping them up to Rank 6, then sets them to battling one another. The ultimate winner is destined to gain the whole of the Phoenix Force, which immediately sets to destroying Earth. But not if this world's own Phoenix Force has anything to say about it.

Krakoan Era Hooks

Here are ten adventure hooks for the X-Men in the Krakoan era.

- A mutant charges through a Krakoan gateway and picks a suicidal fight with one of the Wolverines. It turns out that they've been infected by the Brood and their ability to warn anyone about it is telepathically blocked. They see death as their only possible release.
- A chimeric monstrosity has escaped from one of Mister Sinister's secret labs. Depending on its powers, the monstrosity may sneak around and ambush victims, or it might simply go on a killing spree. Either way, it needs to be found and stopped.
- Orchis has devised a means of using Phalanx technology to infect normal technology with a Sentinel techno-virus. Any device connected to the internet can be affected. Once that happens, the techno-virus breaks down the device and transforms it into a Sentinel of a similar size. Use the Sentinel profile in this book, but change its size to whatever's appropriate and apply modifiers as if the device was affected by the Shrink power.
- A group of Skrulls has infiltrated the island, posing as mutants. They look human enough, and because all shape-shifting Skrulls are actually Deviant Skrulls, Krakoa confused them for mutants and gave them access to the gateway network.
- A group of mutants from Arakko arrives on Krakoa to drink at the bar, and they're spoiling for a fight. They dare anyone to take them on in a duel. If anyone accepts, the visitors haul them off to the Circle Perilous on Arakko and tell the foolhardy souls they'd better have their backups up to date.
- The New Mutants leave for a quick mission and ask the X-Men to look after their young students for an hour or two—which turns into days. The X-Men must care for their young charges and figure out what happened to the junior team.
- Sebastian Shaw approaches a member of the team and offers to make them exceedingly rich in exchange for a seemingly innocuous favor. If they cut a deal with him, though, he can then use it to embarrass them and blackmail them into spying on the rest of the team for him.
- A mob of anti-mutant protesters surrounds the Treehouse in New York City and threatens to burn it down. The X-Men need to put a stop to this without hurting anyone—at least not permanently. This is a public relations mess waiting to happen.
- A gang of thieves figures out that they can fool Krakoa by using Mutant Growth Hormone. They sneak onto the island to steal several unmodified eggs from Arbor Magna, which they hope to use to create a massive stock of MGH.
- A splinter group of Morlocks has set up residence beneath the surface of Freshkills Park—formerly Fresh Kills Landfill—on the west side of Staten Island. They've taken to living inside the remains of a giant Sentinel that was disposed of there. Unfortunately, one of the mutants has been tinkering with the creature and accidentally reactivates it.

X-FACTOR

The arrival of X-Factor marked a paradigm shift in the mutant landscape. Formed from the original X-Men—Cyclops, Marvel Girl, Beast, Angel and Iceman—X-Factor's inception held a secretive air. Functioning as both protectors and trackers of mutants, they navigated the shadows with a dual purpose, injecting a nuanced morality into their heroic origins under the leadership of Cyclops.

Yet, as time passed, the story of X-Factor transcended its mysterious origins. Over time, the team would abandon its covert identity for a more transparent role in the world. Throughout their saga, X-Factor grappled with formidable challenges, mourned the passing of beloved members and underwent profound shifts in composition as new heroes emerged. Their odyssey has unfolded as a captivating exploration of mutant-political landscapes, personal trials and an unyielding pursuit of equilibrium in the intricate dance between mutants and humans.

TEAM HISTORY

Original Team

Several key events led to the formation of the original X-Factor team. Charles Xavier, the founder of the X-Men, made a strategic and unexpected decision: he appointed Magneto, once their greatest adversary, as the leader of the X-Men. Beast and Iceman had recently left the Defenders and were considering a life outside of being a hero. Cyclops had found a new life with Madelyne Pryor, who he had married after Jean Grey's apparent death. However, he found himself uncomfortable with his new domestic life.

Meanwhile, cosmic forces intervened in the form of Jean Grey's resurrection. Though Grey was thought lost during the battle against the Dark Phoenix, the mysterious Phoenix Force orchestrated her return. The elation of Grey's return was tempered by the lingering trauma and the tension between her newfound life and the echoes of her past. Cyclops, in particular, found himself torn between the joy of having Grey back, the haunting memories of the tumultuous events that had transpired and his new life with Pryor.

Warren Worthington and his trusted friend Cameron Hodge brought the five original X-Men back together. They conceived of the idea that would become X-Factor, a way for the five to still be heroes and help the mutant cause outside of the X-Men.

The first X-Factor team consisted of:

Original X-Factor

- Angel (Warren Worthington III)
- Beast (Hank McCoy)
- Cyclops (Scott Summers)
- Iceman (Bobby Drake)
- Marvel Girl (Jean Grey)

In public, X-Factor would appear as humans who hunted mutants for profit. This allowed the five heroes to track down and isolate endangered mutants, bringing them to safety and teaching them how to control their powers and reintegrate into society. The intention was noble, a response to growing

lichael Syrett (Order #53194700)

public prejudice. Unbeknownst to the team, Hodge harbored a secret agenda—one that sought to intensify hatred toward mutants. The supposed mutant hunters inadvertently became instruments in his Machiavellian plot, amplifying the very prejudices they sought to quell.

X-Terminators

When publicly engaging in super-hero activities in costume, X-Factor adopted the guise of another mutant team known as the X-Terminators. The first X-Terminators team started with the five original members:

X-Terminators

- Angel (Warren Worthington III)
- Beast (Hank McCoy)
- Cyclops (Scott Summers)
- Iceman (Bobby Drake)
- Marvel Girl (Jean Grey)

X-Factor eventually ventured beyond their original mission of safeguarding mutants and humans alike. In their clandestine efforts, they amassed a group of mutants, drawn from various walks of life and backgrounds. This eclectic assembly included Morlocks (individuals living in the underground tunnels of New York City) and several adolescents, each bearing the unique burden of being a mutant in a world teetering on the edge of acceptance and fear:

- Artie (Arthur Maddicks)
- Boom-Boom (Tabitha Smith)
- Caliban
- Firefist (Rusty Collins)
- Leech
- Rictor (Julio Richter)
- Skids (Sally Blevins)

The X-Terminators, as they were known in public, became a multifaceted team operating in the gray areas of mutant-human relations. The delicate balance of posing as mutant hunters while secretly aiding and training mutants complicated their mission.

Amid the expansion of X-Factor's covert operations and the integration of mutants into their ranks, a significant chapter unfolded with the short-lived membership of Caliban, a Morlock with the ability to sense and track other mutants. His unique tracking abilities proved invaluable, enhancing the team's capacity to locate and assist mutants in need. Caliban's presence aided the team's interactions with the Morlock community, further fostering a sense of trust and cooperation.

The team reached another crossroads when the Marauders, a team of mutant villains, massacred the Morlocks. The Marauders captured and mutilated Angel. Struggling with the psychological toll of his experiences and the weight of losing his wings, Angel's life took a dark turn. Apocalypse, a powerful and malevolent mutant, seized the opportunity to manipulate his vulnerabilities.

Under Apocalypse's influence, Angel's wings were transformed into razor-sharp metallic appendages, marking the birth of Archangel. The transformation was not just physical; it extended to Worthington's psyche, aligning him with Apocalypse's destructive ideology.

Eventually, Archangel gained control over his wings, but their murderous influence left him somber and brooding. The

chaos and transformative potential of Apocalypse's ideology resonated with Caliban, leading to a fateful decision. Seeking purpose and power, Caliban left X-Factor and aligned himself with Apocalypse. X-Factor joined forces with their previous mentor, Professor Xavier, upon his return to Earth to confront the Shadow King, who had seized control of Muir Island and taken possession of many X-Men. They freed their allies and dealt a significant blow to the Shadow King, although the battle resulted in Professor Xavier being paralyzed again. Following this, X-Factor chose to dissolve and reintegrate with a newly formed X-Men team.

Government Team

Out of the chaos, a new X-Factor emerged. Government agent Valerie Cooper gathered individuals who had previously worked with the X-Men to replace Freedom Force as the officially sanctioned mutant team under the authority of the Pentagon. The team rejected the name Freedom Force, as that group had consisted of semi-reformed criminals. Instead, they revived the name X-Factor.

Government Team X-Factor

- Forge
- Havok (Alex Summers)
- Multiple Man (Jamie Madrox)
- Mystique (Raven Darkhölme)
- Polaris (Lorna Dane)
- Quicksilver (Pietro Maximoff)
- Sabretooth (Victor Creed)
- Shard (Shard Bishop)
- Strong Guy (Guido Carosella)
- Valerie Cooper
- Wild Child (Kyle Gibney)
- Wolfsbane (Rahne Sinclair)

X-Factor's government-sanctioned era reflected the wider challenges confronting mutants in a society tainted by prejudice. When it was revealed that Cooper was aware of a government-run Sentinel program, her relationship with the team was badly damaged. Forge—because of his background as a government weapons contractor with the power to invent technology—was initially added as team liaison to replace Cooper. His strategic brilliance made him an asset for the team, and he would later assume the role of leader. Forge used his technological prowess to control the unpredictable and aggressive mutants who would later join the team.

Cooper later became a rare, non-mutant active member of X-Factor. Her marksmanship and athletic skills made her an integral part of the team's operational dynamics, despite her lack of a mutant gene.

Under Forge's leadership, Mystique—the former leader of Freedom Force with Cooper—and Sabretooth, former adversaries with tumultuous histories, joined the ranks, injecting an element of tension and moral ambiguity. The fact that the government forced the inclusion of past enemies raised protests from the team and Cooper and challenged X-Factor's unity and trust.

The inclusion of Shard, a holographic projection from a dystopian future, provided glimpses into potential futures, raising questions about the wisdom and consequences of knowing about possible fates. Wild Child, with untamed instincts and a connection to Wolverine's history, diversified the team, showcasing the varied experiences of mutants.

Eventually, the team broke away from government sponsorship. Multiple Man and Strong Guy both left the team, despite Forge's success in addressing Strong Guy's heart problems caused by his mutant abilities. Meanwhile, Sabretooth turned on the team, and Mystique left to pursue him. Wild Child was forced to exit after a new mutation turned him into a four-legged creature.

Ultimately, Forge made the decision to sever X-Factor's ties with the government, opting instead to operate the team in secrecy. However, not long after this transition, the team faced a severe crisis due to Sabretooth's violent attack on the team, which almost led to X-Factor's disbandment. Following this turmoil, Forge stepped down from his leadership role.

A new iteration formed temporarily, featuring Havok, Multiple Man, Polaris and Shard, as well as Fixx and Greystone, members of the time-traveling Xavier's Security Enforcers (X.S.E.). Greystone, driven by a desire to return to the future, constructed a time machine. The device's explosion claimed the lives of Greystone and Havok. In the aftermath, X-Factor dissolved completely.

X-Factor Investigations

Eventually, a new chapter began with the establishment of X-Factor Investigations, a detective agency helmed by the enigmatic Jamie Madrox, better known as Multiple Man.

X-Factor Investigations

- Darwin (Armando Muñoz)
- Layla Miller
- Longshot
- M (Monet St. Croix)
- Multiple Man (Jamie Madrox)
- Rictor (Julio Richter)
- Shatterstar (Gaveedra Seven)
- Siryn (Theresa Cassidy)
- Strong Guy (Guido Carosella)
- Wolfsbane (Rahne Sinclair)

The name, X-Factor Investigations, paid homage to the government-sponsored group. The detective agency was formed by Madrox, his confidant Strong Guy and former teammate Wolfsbane. Madrox's newfound wealth from winning a game show allowed him to fund the team.

Madrox orchestrated the enlistment of former colleagues from the Paris branch of X-Corporation, a then-defunct mutant-rights organization. Among the recruits were M, Rictor, Siryn and Layla Miller. Engaging in clashes with Singularity Investigations, the team grappled with not only external adversaries but also with the ramifications of Madrox's unique powers.

Madrox and Miller traveled to an apocalyptic future where mutants were being hunted down and imprisoned. Although

Michael Syrett (Order - 53194700)

Madrox managed to return to the 21st century, Miller chose to remain in the future and fight for the resistance. Wolfsbane, haunted by a prophetic vision of murdering Madrox and Miller in her lupine form, took her leave from X-Factor, finding a new purpose with X-Force.

Madrox's journey took him further into a potential future where he had previously encountered Miller. In this future, an older Layla Miller had become a prominent leader. Together, they navigated a rebellion led by a cyborg Scott Summers and his daughter, Ruby. At the same time in the present, one of Jamie Madrox's duplicates, who went by the name Cortex, started to use his powers to control the minds of the X-Factor team members. Cortex was given orders to eliminate certain individuals to alter the future's course, including the original Madrox, on the directive of Anthony Falcone, who was being manipulated by Damian Tryp from Earth-616.

Cortex gained control over Shatterstar's mind, compelling him to attack his allies until Shatterstar was freed from Cortex's influence and decided to stay with the team, particularly to be close to Rictor. At the same time, feeling regretful for abandoning his family, Darwin's father hired X-Factor Investigations to locate Darwin. Although the reunion between father and son initially seemed heartfelt, it was later uncovered that Darwin's father, Hector, intended to deliver Darwin to the Karma Project for his own purposes. The recently arrived amnesiac Longshot helped X-Factor track down the Karma Project headquarters. X-Factor intervened, rescuing Darwin, who chose to join the team in gratitude and solidarity.

Observing the changes in the timeline, Madrox realized in the future that these alterations were causing mutants to vanish. Their rebellion faced a setback with the loss of their comrade Trevor Fitzroy, and despite Miller's attempt to revive him, both Madrox and Miller were transported back to the present using a time-travel device. Upon their return, Madrox rejoined X-Factor, while Miller went back to the orphanage she had once lived in to impart the knowledge she had accumulated over 80 years to her younger self.

THE BONEYARD

The Boneyard has a "pod" structure. Each level forms a ring out from the center, and these rings form a light well down to the leisure area and Hanging Gardens. Flyers can use this open space to fly up and down to the various floors. For non-flyers, the staircase is a continuous spiral flowing around the outside of the light well.

The Boneyard is living, sentient and can grow as needed. It can become taller or wider. Its roots can dig deeper into the ground, opening new caves. Its exterior can become spiked and angular, should outside defense become necessary.

Snow was secretly an inventor from the world of 2099 who planned to sponsor super heroes until he amassed enough power to destroy the company Alchemax and therefore the future he came from. The team was unaware of his intentions. This version of X-Factor broke up some time before the Krakoan era, though the circumstances have not been revealed.

Krakoan Team

Having sensed the death of his twin sister, Aurora, Northstar promptly flew to the mutant haven of Krakoa, demanding her resurrection. Faced with the challenge of substantiating her death without conclusive evidence and mindful of the complexities of having duplicates coexisting with the original, the Five—a circuit of mutants working in conjunction to resurrect fallen mutants—tasked Northstar with proving Aurora's demise. Northstar, aided by Polaris, assembled a new X-Factor team. Their collective efforts led to the discovery of Aurora's lifeless body and evidence of her death, albeit one shrouded in mystery.

X-Factor (Krakoan)

- Aurora (Jeanne-Marie Beaubier)
- Daken (Akihiro)
- Eye-Boy (Trevor Hawkins)
- Northstar (Jean-Paul Beaubier)
- Polaris (Lorna Dane)
- Prestige (Rachel Summers)
- Prodigy (David Alleyne)

Aurora was resurrected, and in the aftermath a collaborative agreement took shape between X-Factor and the Five. X-Factor would investigate and verify mutant deaths to ensure resurrections were justified. Northstar assumed leadership of the team.

LOCATIONS

X-Factor Complex

The X-Factor Complex served as a pivotal hub for early missions. Nestled within the heart of Manhattan, it stood as a beacon of unity for mutants. The iconic X-Factor logo graced the exterior, symbolizing the team's commitment to Xavier's dream. More than just a strategic base, it functioned as a dynamic center for training, strategy sessions and coordination of missions. State-of-the-art facilities housed advanced training areas tailored to each mutant's abilities, ensuring they could hone their powers effectively. The facility featured living quarters and therapy rooms to help members address their personal struggles. The central location allowed X-Factor to be in the thick of the action, responding swiftly to emerging threats in the city.

Ship

Ship was originally a creation of the Celestials, enigmatic space gods who had shaped the course of life on Earth. The ancient mutant Apocalypse enslaved the sentient spaceship and transformed it into his personal vessel. After a battle with Apocalypse, Ship crashed into the X-Factor Complex. With its perfect cloaking devices and reprogramming by Apocalypse's profound understanding of Celestial mechanics, Ship was adopted as an invaluable addition to X-Factor, a unique mobile headquarters, providing a versatile space for planning, discussions and recuperation between missions. It played a pivotal role in guiding the team during critical moments, acting as both a logistical center and a sanctuary for the team's members.

Ship would go on to have a pivotal role in the life of Cable. It was the vessel that took the baby Nathan Summers into the future, where it became the sentient A.I. Professor. When Summers, now known as Cable, returned to the past, Professor took over the Graymalkin space station. After Graymalkin's destruction, Cable copied the A.I. from the base into his own Techno-Organic body parts and then into X-Force's Camp Verde headquarters. Years later, Professor had evolved into "Prosh," but after learning that it was harming Cable by affecting his ability to manage his Techno-Organic virus, it turned into a spaceship and left Earth.

Mutant Town

A mutant neighborhood in the East Village section of Manhattan. Notable places in it include:

X-Factor Investigations Headquarters

Jamie Madrox initially established X-Factor Investigations on the top floor of a five-story brownstone in Mutant Town, strategically positioned across the street from the mutant bar known as the Power Plant and just a few blocks from the Mutant Square subway station.

Following Madrox's significant win of a million dollars on a game show, he purchased the building. Subsequently, he embarked on a renovation project, converting portions of the structure into not only offices for X-Factor Investigations but also into living quarters for the team's staff, perhaps bending a few building codes in the process. It functioned as both a base of operations for investigative work and a refuge for mutants seeking assistance. The quarters within the facility offered a communal living arrangement, fostering a sense of unity among the team members.

The brownstone continued to function as the central hub for X-Factor Investigations until Arcade destroyed it in his attack on Mutant Town. For a short time after Arcade's attack, the team moved to a Victorian building in Detroit, Michigan.

11th Precinct Station

The 11th Precinct station was the major police station servicing District X. Bishop worked as a consultant at the station and partnered with police officer Izzy Ortega.

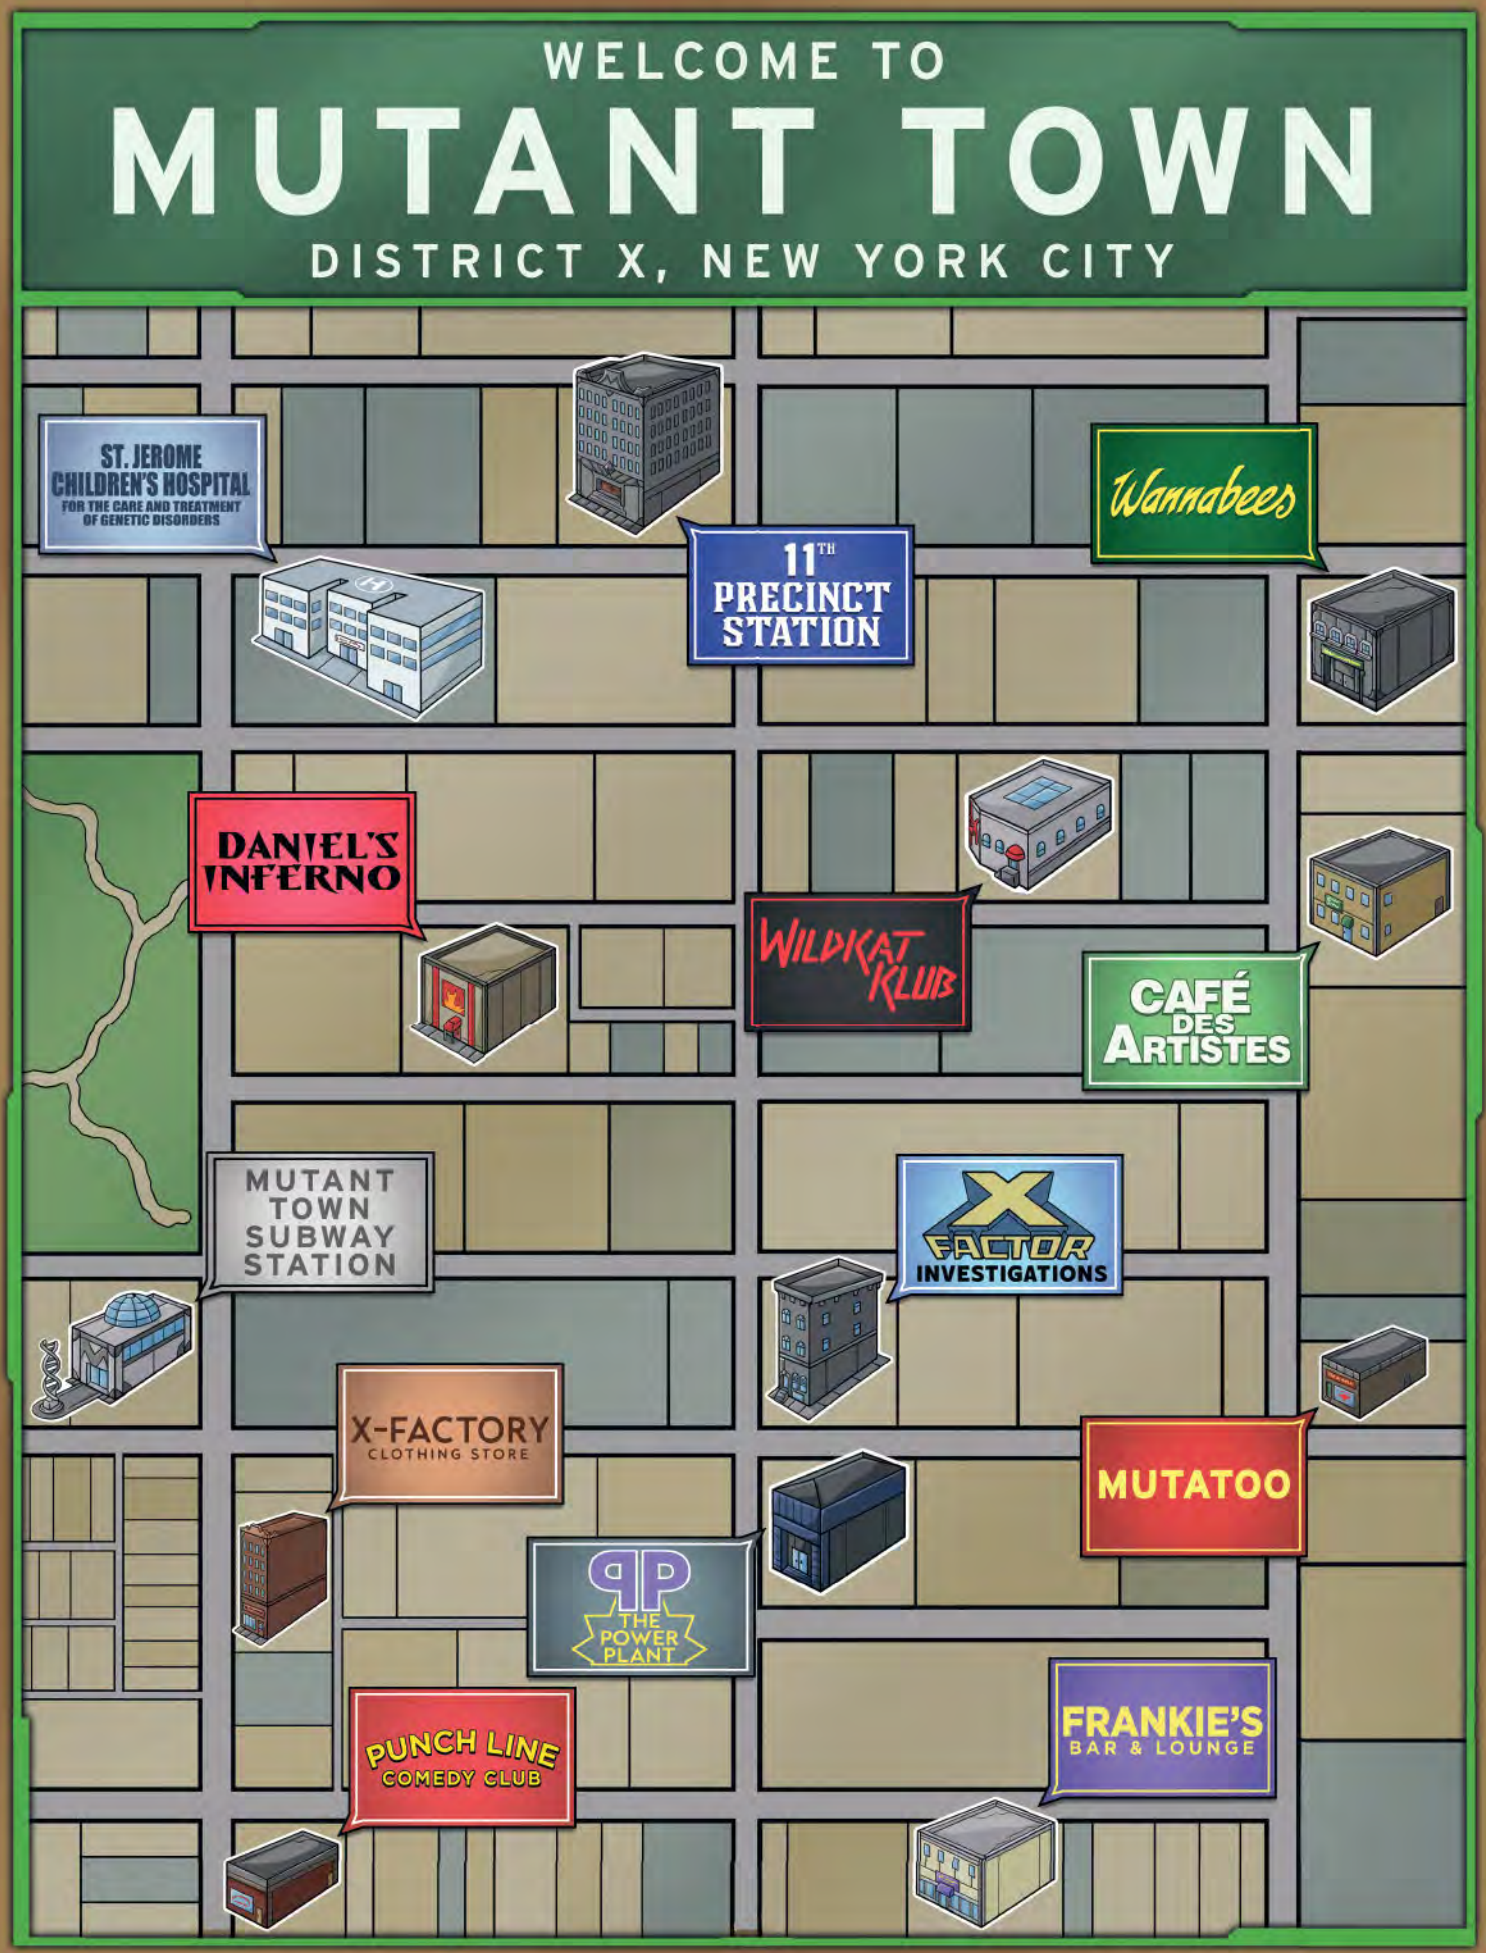
Café Des Artistes

A small diner that was popular with police from the 11th Precinct station. The restaurant was the site of a hostage situation when mutant Billy Bates accidentally killed several unpowered humans.

Daniel's Inferno

A nightclub owned by Daniel "Shaky" Kaufman, a mutant gang lord. The club featured a huge water tank in which mermaid-like mutant women would swim for the entertainment of patrons.

Michael Syrett (Order - 5319-1700)



Michael Syrett (Order #53194700)

Frankie's Bar & Lounge
Nightclub owned by "Filthy" Frankie Zapruder, a mutant gang lord who was in a war against Daniel "Shaky" Kaufman.

Mutant Town Subway Station
Nicknamed "Mutant Square," the major subway station servicing those living in Mutant Town featured a statue of a molecule.

Mutatoo
Mutatoo, a small tattoo parlor, was used by Kid Omega (Quentin Quire) when he and his friends got matching tattoos and called themselves the Omega Gang.

The Power Plant
Located across the street from X-Factor Investigations, the Power Plant was a popular bar with the team.

Punch Line Comedy Club
The Punch Line Comedy Club burned down in Arcade's attack on Mutant Town. Paula the Comic, a mutant whose power made people laugh, was a frequent performer at the club, even after being depowered on M-Day.

St. Jerome Children's Hospital
A hospital with a ward for genetically disabled children. Winston Hobbes, a boy whose mutant gene made him into a large worm-like being, was housed here before escaping into the Mutant Town subway tunnels.

Wannabees
A mutant-themed nightclub. X-23 (Laura Kinney) worked in the club as a waitress for a short time.

Wildkat Klub
A nightclub owned by Daniel Kaufman, who ran a drug ring out of the back offices. Kaufman extracted a hallucinogenic drug from the mutant Toad Boy, who was kept at the club. Kaufman's rival gang lord, "Filthy" Frankie Zapruder, detonated plastic explosives in the club, destroying it. It was later rebuilt.

X-Factory Clothing Store
Clothing store that featured the fashions of Jumbo Carnation.

The Boneyard
Once the Krakoan X-Factor team formed, Polaris collaborated with the living island to create a new headquarters. Christened the Boneyard by Daken, the metallic tower served as residence and headquarters for the team.

OPPONENTS
Each iteration of X-Factor faced a diverse array of adversaries who tested their resilience and convictions. The group contended with foes embodying betrayal, technological prowess and a relentless opposition to mutantkind.

Freedom Force
The Brotherhood of Evil Mutants underwent a significant transformation into a government-sanctioned team called Freedom Force. Members included Mystique, Destiny, Pyro, Blob and Avalanche, among others. Their government affiliation tasked them with several controversial duties, including the enforcement of the Mutant Registration Act, which brought them into direct conflict with X-Factor.

Freedom Force's role enforcing laws led them to attempt to arrest the X-Men, who were declared outlaws. These actions showed the government team's commitment to their directives, regardless of public opinion on their methods or the ethics of their missions.

Tensions further escalated when it was discovered that they were aiding the government's efforts to forcibly recruit young mutants. This initiative starkly contrasted with the more voluntary and protective approach taken by X-Factor.

Cameron Hodge and the Right
Cameron Hodge, the former college roommate of founding X-Factor member Warren Worthington, initially served as the team's public-relations agent. However, he eventually was unveiled as the mastermind behind the anti-mutant terrorist organization known as the Right. Archangel confronted him and decapitated him with his metal wings. Despite this apparent demise, Hodge's head resurfaced, attached to a formidable robotic body, in the island-nation of Genosha.

After apparently perishing in Genosha, Hodge miraculously survived due to his partial absorption of Warlock's powers. This endowed him with a techno-organic physiology, allowing him to absorb and integrate other beings and technological entities into his very essence. This newfound ability transformed Hodge into the heart of an emergent collective entity known as the Phalanx. Despite its initial appearance as a mere aggregation of absorbed entities, the Phalanx soon manifested a collective intelligence that far surpassed any individual member's capabilities. Ultimately, this collective consciousness chose to sever its ties with Hodge, destroying his brain and, with it, any semblance of his individual control or influence over the Phalanx's direction.

The Right, birthed from Hodge's malevolent vision, operates as an anti-mutant organization, employing high-tech flying battle suits. These suits, adorned with machine guns, missiles and unsettling smiley-face faceplates, serve as the formidable arsenal of the Right's commandos.

Madelyne Pryor
Madelyne Pryor, the romantic partner and first spouse of Cyclops (Scott Summers), played a significant role in the X-Men's lives. She suffered profound emotional turmoil after being abandoned by her husband when it was revealed Jean Grey was still alive. This was soon compounded by the unbearable grief of losing her infant son to Mister Sinister. The situation escalated further when it was revealed that she was not merely Jean Grey's look-alike, but actually a clone. Her bitterness left her vulnerable to manipulation by the demon N'astirh, who transformed her into the powerful villain known as the Goblin Queen. Notably, she is the mother of the powerful mutant known as Cable.

The Marauders
The initial roster of the Marauders comprised mutant warriors and assassins in the employ of Mister Sinister, a villainous mad scientist trying to create a flawless superhuman race. Sinister sent the Marauders to carry out missions ranging from kidnappings and assassinations to mass murder.

Apocalypse

Apocalypse perceives himself as the progenitor of mutantkind. He possesses remarkable shape-shifting abilities and virtual immortality. Apocalypse encountered the Celestials and recognized a potential future judgment upon humanity. Consequently, he embraced Darwinian principles, advocating for the survival of the fittest by eliminating the weak and compelling the survivors to evolve into stronger beings.

Viewing himself as the harbinger of modern humanity's destruction and the catalyst for the emergence of mutantkind, Apocalypse stands in stark contrast to Magneto, as he prioritizes the absolute survival of the fittest over the protection of all mutants. Though initially an opponent of X-Factor, Apocalypse has become a major antagonist for many mutant teams as well as all of humanity.

Damian Tryp, Singularity and X-Cell

The mutant time-traveler Dafydd ap Andras' personal schemes often put him at odds with X-Factor Investigations. By the 21st century, Andras adopted the name and facade of Damian Tryp, establishing Singularity Investigations. The organization was controlled by three distinct versions of Tryp, each from a different point on his timeline: Damian Tryp Sr., a middle-aged CEO steering Singularity Investigations; Damian Tryp Jr., a younger counterpart posing as his son and second-in-command; and Tryp the Eldest, an elderly iteration advising his younger selves.

Damian Tryp's powers, including longevity and time manipulation, trace back centuries and have caused him to be directly involved in Madrox's history, notably through a tragic incident that resulted in the death of Madrox's parents when they refused to turn the infant over to Tryp to raise.

Tryp's manipulations extended to a brutal confrontation with Siryn, escalating conflict between Singularity and

Michael Syrell (Order - 53194700)

X-Factor Investigations. The discovery of Tryp's plans to re-create the Legacy virus, a deadly mutant affliction, revealed a sinister plan aimed at preventing a future where mutants could lead to humanity's downfall. This revelation pitted X-Factor against Singularity in a race to alter or preserve the future, culminating in the destruction of Singularity's headquarters and the apparent demise of Tryp's younger selves.

PLAYING X-FACTOR

While understanding X-Factor's vast and storied history is important, it's only one part of what's required to bring a member of the team to life in the game.

Theme

Unlike the X-Men, who often embody Charles Xavier's dream of peaceful coexistence through recruitment and education, X-Factor grapples with societal prejudices in a more personal and immediate manner. The team, initially posing as mutant hunters and later evolving into a detective agency, confronts anti-mutant sentiment on an individual level. Their role involves dealing with the fallout of mutants who have faced discrimination and trauma.

In terms of actions, their missions are often reactive, addressing the consequences of prejudice rather than actively trying to change public perception. Their detective work involves uncovering the stories of mutants who have suffered, providing a platform for these individuals to seek justice and understanding.

Style

X-Factor's distinctive style is deeply rooted in its origin as a team forged by the five original X-Men: Jean Grey, Cyclops, Iceman, Beast and Angel.

The team's detective work, stemming from their origin as supposed mutant hunters, introduces a more grounded and realistic approach to their stories. Their team looks beyond ideological differences and actively engages with the emotional complexities faced by mutants in a society that fears and misunderstands them.

Purpose

Throughout its various iterations, X-Factor has consistently pursued several objectives:

- To investigate discrimination against mutants.
- To provide support and healing for mutants recovering from discrimination.
- To bring justice for victims of discrimination.

Transportation

X-Factor Plane

X-Factor used an experimental superjet built by Worthington Industries for its early missions. The ship served the team much like the *Blackbird* served the X-Men. Over time, the team moved on to using Ship for their travel needs.

Raptor Jet

Serval Industries' X-Factor had access to the company's wide range of resources, as well as a series of specialized vehicles. The Raptor Jet was a small aircraft used for rapid transportation and included an array of weapons.

Krakoan Gateways

During the Krakoan era, X-Factor used the island's plant-based gateways, which are part of a hive-mind network allowing for instantaneous travel to anywhere a gateway has been planted. These portals are exclusively accessible to mutants, although a human can accompany a mutant through a gateway with Krakoa's consent.

JOINING X-FACTOR

For a mutant looking to find a home and make a difference, here's how to join X-Factor.

Requirements

While X-Factor has occasionally made exceptions for non-mutants, such as Valerie Cooper, the team's membership prioritizes mutants or individuals deeply associated with them, especially if the individual would have a hard time fitting in anywhere else due to their appearance or disposition.

Getting In

One distinctive route to catching X-Factor's attention is through recruitment during their "mutant hunting" missions. As the team investigates cases related to discrimination and harm against mutants, individuals showcasing exceptional skills or a commitment to addressing mutant-related issues may draw notice. This unconventional recruitment method underscores the team's hands-on approach to addressing the aftermath of societal prejudices and highlights their dedication to supporting mutants in need.

Additionally, being a former member of the X-Men is a straightforward path to joining X-Factor. Individuals with prior experience as part of the premier mutant team not only are familiar with the challenges faced by mutants, but also bring a wealth of skills and insights that align with X-Factor's mission. This direct connection to the X-Men streamlines the recruitment process and enhances the team's overall capabilities through the addition of seasoned individuals who share a common cause.

The character must be at least Rank 2 to join.

Character Alterations

Once a character becomes part of X-Factor, they should add that fact to their character sheet under Teams. They now can take part in team maneuvers with other team members, even ones they haven't personally trained with before.

Most members of X-Factor maintain a secret identity, although some members of the team operate openly. Official members of X-Factor are likely to take Investigator as their occupation.

Powers and Roles

In X-Factor, the team structure and composition take a distinctive approach compared to the X-Men, embracing diversity not only in powers but also in roles. While the X-Men often face concerns about overlapping powers or duplicated roles causing friction within the team, X-Factor operates with a more flexible mindset.

Michael Syrett (Order - 5319-1700)

Contrary to the X-Men's tendency to work best with a single leader, X-Factor thrives on a collaborative leadership model. Multiple individuals may contribute their leadership strengths, offering a dynamic and adaptable approach to decision-making.

Furthermore, X-Factor is open to members who may not possess overt combat-oriented abilities. The team recognizes the value of diverse skill sets, acknowledging that not every member needs to be a powerhouse in direct confrontations. This inclusive approach allows for a more versatile team capable of addressing a broad spectrum of challenges, both in and out of combat.

Training Up

Unlike the X-Men's stringent requirement of a minimum Rank 3 for full-time membership, X-Factor adopts a more inclusive approach, welcoming individuals starting at Rank 2. This distinction allows X-Factor to actively recruit and train members who may be considered weaker or less experienced compared to the standard set by the X-Men.

Individuals at Rank 1 may still find a place within X-Factor, albeit with some restrictions. While they might be brought on to the team, they are often shielded from more perilous missions until they gain sufficient experience. This protective measure ensures the safety and development of newer members, allowing them to gradually acclimate to the challenges faced by the team.

Duties

Being a member of X-Factor entails a set of duties and responsibilities that reflect the team's commitment to the well-being of mutants and the pursuit of Xavier's dream. Similar to the expectations placed on X-Men, individuals within X-Factor are required to engage in rigorous training, both independently and collaboratively with the rest of the team. This training is essential for honing their abilities, maintaining peak physical condition and fostering a cohesive unit.

Collaboration and teamwork form the cornerstone of X-Factor's ethos. However, members are expected to take orders from the team's leaders, recognizing the importance of cohesive decision-making and unified action. The emphasis on teamwork is paramount, and individuals who struggle as teammates are encouraged to improve their collaborative skills, or they may be asked to reconsider their membership.

Public Perception

X-Factor's public perception has undergone significant shifts throughout its existence, reflecting the various roles the team has played over the years. Initially positioned as mutant hunters, the team operated under the guise of hunting down their own kind to alleviate anti-mutant sentiment. This approach, while well-intentioned, inadvertently intensified public distrust and fear of mutants.

During their government-sanctioned era, X-Factor's public perception evolved yet again. As an official mutant team working for the government, they faced both scrutiny and support. The association with government agencies brought a level of legitimacy to their actions, but it also raised questions about their autonomy and the true nature of their missions. The public's perception of X-Factor took on new political considerations, and their every move was scrutinized in the context of government agendas.

In their independent phase, X-Factor had the opportunity to redefine their public image. Operating autonomously allowed the team to engage with mutants on a more personal level, fostering connections and dispelling the notion that they were truly the mutant hunters they'd previously masqueraded as. The shift in perception was gradual, with the team working to rebuild trust and showcase their dedication to Xavier's dream of peaceful coexistence.

Serval Industries used its public-relations teams to present X-Factor as super heroes who would react to super-villain attacks. However, Quicksilver and Gambit had to overcome their images as criminals in the public eye.

In the Krakoan era, the X-Factor team worked mostly outside of the public eye investigating the fates of missing mutants to determine if they are alive or potential candidates for resurrection.

X-FACTOR ADVENTURE HOOKS

Sometimes a Narrator needs a little inspiration to help put an adventure together. Here are a number of adventure hooks to get things started.

Players might want to skip this section entirely, but there's likely no harm in peeking. After all, these hooks are only the starting premises for adventures. Where the game goes from there is entirely up to the Narrator—and the players too!

Original X-Factor

Here are four adventure hooks for X-Factor in the Original Team era.

- In the early days of X-Factor posing as mutant hunters, rumors spread of a secret organization plotting to exploit mutants. Who is orchestrating this shadowy conspiracy linked to anti-mutant factions within the government? What are their end goals, and how does X-Factor plan to unveil the perpetrators while safeguarding the mutants from harm and averting an all-out mutant conflict?
- X-Factor is tasked with hunting down a young mutant who causes earthquakes when she gets upset. She is clearly dangerous but also vulnerable and scared. When the public pushes X-Factor to imprison the child, what will X-Factor do? Who within X-Factor pushes for containment, and who opposes it, fearing the moral implications? How will the team ensure the safety of both the mutant in question and the broader community, without igniting a conflict that could tear them apart?
- X-Factor encounters a group of mutants who view them as a symbol of betrayal for posing as hunters. These mutants, harboring deep resentment, initiate a series of attacks on X-Factor. Faced with the consequences of their past actions, how will X-Factor address the complaints of those they've wronged, help heal the fractures within the mutant community and prevent these tensions from escalating into a wider conflict?
- X-Factor learns of a plot by members of the Right to infiltrate their ranks to gather intel on mutants. Who within their circle might be helping these spies, and how will X-Factor expose the moles within their ranks?

Government Team X-Factor

Here are five adventure hooks for X-Factor in the Government Team era.

- X-Factor, now working for the U.S. government, uncovers an ongoing secret project with ties to Weapon X. Mutants have been duped into dangerous experiments. There is even evidence that some may have been killed. X-Factor is told by their handlers to lay off, as the program is vital to national security. Can X-Factor protect these mutants without compromising national security?
- The government enacts a Mutant Registration Act, requiring all mutants to register their powers. X-Factor is tasked with enforcing the act, leading to potential questions about the government's motives and the impact on mutant rights. What will they uncover about this project's connection to past atrocities? How will they balance the needs of national security against the moral obligation to expose the truth?
- A group of rogue Sentinels breaks free from government control. X-Factor must prevent a citywide catastrophe as these powerful machines wreak havoc on mutants and non-mutants alike. What discoveries will X-Factor make about the origins of these rogue Sentinels, and how will they address the ethical implications of the government's involvement in their creation?
- X-Factor clashes with Canada's super-hero team, Alpha Flight, as the two groups are assigned to investigate a mysterious phenomenon threatening both countries. How will these teams overcome their differences to confront a shared danger, and what revelations will their partnership unearth about the true nature of the challenges they face together?
- X-Factor uncovers a secret organization, the Shadow Council, manipulating government decisions related to mutants. How will X-Factor outmaneuver such deeply entrenched enemies while preventing the looming crisis engineered to divide and destabilize society?

X-Factor Investigations

Here are five adventure hooks for X-Factor in the X-Factor Investigations Team era.

- X-Factor Investigations is hired to locate a missing mutant heir to an influential family with a crucial role in mutant politics. How will X-Factor navigate the competing challenges of power and ambition, and what implications will this have for the missing heir?
- In the aftermath of the Decimation, X-Factor is tasked with uncovering the truth behind the disappearance of mutant powers. As they investigate the source of this phenomenon, the team stumbles upon a hidden plan by Damian Tryp to reshape the mutant landscape. How will X-Factor contend with this, and how will they disrupt Tryp's vision for the future of mutants?
- X-Factor receives a plea for help from a mutant whose powers unwittingly wreak havoc on the environment, from altering weather patterns to causing uncontrolled plant growth, posing a significant threat to both natural and urban landscapes. The investigation leads them to confront the legacy of a deceased mutant scientist once celebrated for pioneering eco-friendly technologies harnessing mutant powers for environmental restoration. However, beneath the surface of his achievements, the

Michael Syrett (Order - 5319-1700)

scientist's secret experiments aimed at amplifying mutant abilities have left behind a dangerous imbalance. How will X-Factor reconcile the scientist's lasting contributions with the present predicament, and how will they navigate the ethical impact of mutantkind's role in the natural world?

- A pharmaceutical company claims to have developed a cure for mutant abilities, and mutants are disappearing after seeking the treatment. What's the true purpose behind this company's cure? Is it genuinely aimed at helping mutants, or is there a more sinister plan at play? What is the company's ultimate goal in collecting mutants, and how does the cure play into their plans?
- Mutant Town, a haven for mutants, faces escalating tensions due to X-Factor's controversial mutant-hunting activities. The team must quell the rising unrest, investigate the true instigators behind the turmoil and find a way to bridge the gap between mutants and humans before the situation spirals out of control. How will X-Factor confront the complexities of their role and prevent irreparable consequences for both communities?

Art by Ryan Sook

Krakoan X-Factor

Here are five adventure hooks for X-Factor in the Krakoan Team era.

- Several resurrected mutants have suffered unpredictable changes in their powers and missing memories. X-Factor is tasked with investigating the anomalies. Is there a problem with the resurrection process? Or is there something tying these mutants together? Could some mutant have tampered with the resurrection process? If so, is it a plot to disrupt trust in the process or is someone trying to hide something these mutants knew about? How will X-Factor restore the integrity of the resurrection process and safeguard Krakoa's future?
- As X-Factor investigates mutants in line for resurrection, they find several alive and well. All of these mutants died before Krakoa was established. None of them remember the circumstances of their disappearance, except for a phrase in Latverian they all heard but most didn't understand. What happened to these mutants and how does it tie in with Doctor Doom's kingdom?
- A series of attacks targets key Krakoan facilities, disrupting the resurrection process. The attacks must have come from someone already on Krakoa. X-Factor is tasked by the Five to investigate. What mutant would want to disrupt the resurrection process and why? Are the Five in danger? Are there simmering divides in the community over the ethics of resurrection?
- An ancient mutant artifact emerges, possessing the ability to enhance or alter mutant powers. X-Factor is tasked with securing the artifact and preventing it from falling into the wrong hands. As they investigate its origins, the team uncovers a connection to a forgotten era of mutant history. What secrets does the artifact hold, and how will it change the future of mutantkind?
- While investigating the status of missing mutants, X-Factor stumbles upon a chilling pattern of disappearances that hints at a greater conspiracy. Their investigation reveals disturbing connections to Orchis, a shadowy organization known for its anti-mutant fanaticism. This revelation drives X-Factor into a secret mission to infiltrate Orchis and expose the leaders orchestrating a plot aimed at eradicating select mutants, threatening the stability and safety of Krakoa and its residents. What specific targets has Orchis chosen among the mutant community, and why? How does this plot tie into Orchis' broader strategy against mutantkind, and what unforeseen consequences might arise from X-Factor's actions?

X-FORCE

X-Force became the unsanctioned guardians of a world that needed its heroes to operate beyond the spotlight, where victory sometimes required stepping into the gray areas that the black-and-white morality of the past couldn't navigate. While the members of the X-Men and X-Force seem to swap often—and from an outside perspective seem like they could be the same team—the core difference between the two is X-Force's militant approach to what has always been a peaceful call for harmony between mutants and humans. They are a strike team. They are spies. They are vigilantes. They are X-Force.

TEAM HISTORY

As the challenges facing the X-Men became more complex, a core group within the New Mutants recognized the need for a more proactive and covert approach to address the mounting dangers. This came to a head when the New Mutants aided Cable in his fight against the Mutant Liberation Front. Seeing their abilities and potential as fellow soldiers in the looming war, Cable stepped up to be their new mentor, teacher and leader, reorganizing the team into X-Force.

Dawn of X-Force

The first X-Force team was formed under Cable's leadership and consisted of the following members:

Original X-Force

- Boom-Boom (Tabitha Smith)
- Cable (Nathan Summers)
- Cannonball (Samuel Guthrie)
- Domino (Neena Thurman)
- Feral (Maria Callasantos)
- Shatterstar (Gaveedra Seven)
- Warpath (James Proudstar)

Cable was transforming the New Mutants into a more militant force to address the increasing threats faced by mutants when Shatterstar—a warrior from the Mojoverse with exceptional combat skills—came to Earth. His fighting background and battle expertise complemented Cable's vision for a more aggressive approach in dealing with threats to mutantkind. While Shatterstar was originally searching for X-Men to help him with his own challenges, Cable convinced him that this new team would be better than the X-Men. The synergy between Cable and Shatterstar contributed significantly to the evolution of the New Mutants into X-Force.

Together with other members like Domino (a hand-to-hand combatant with the mutant ability to manipulate probability in her favor) and Warpath (who had a personal stake in mutant affairs due to the tragic death of his brother, Thunderbird), X-Force departed from the more traditional super-hero model of the X-Men. Each original member played a crucial role in shaping the identity and purpose of X-Force as a formidable and unconventional mutant strike team.

Art by Rob Liefeld & Thomas Mason

The tactics of X-Force garnered the attention of S.H.I.E.L.D. Commander G.W. Bridge, who, despite being a former ally of Cable, wanted to put a stop to his new group. The Canadian government's Department K gave Bridge permission to use their Weapon P.R.I.M.E. team to take X-Force down.

X-Force persisted through attacks by many factions, always endeavoring to protect mutant life at all costs. They teamed up with others (such as Spider-Man and Siryn, to prevent a terrorist bombing by Black Tom and Juggernaut), but after specific missions, they regularly returned to their core group. Although the team roster began to change, this directive to protect mutant life was always consistent.

X-Cutioner's Song

A few years into the exploits of X-Force, Cable stepped down as team leader after being framed for the attempted murder of Professor Charles Xavier.

Stryfe, Cable's nemesis, emerged as a central player, orchestrating attacks that aimed to portray Cable as a danger to both the X-Men and Earth as a whole. The X-Men and X-Factor teamed up to capture Cable, setting off a series of events that led to distrust and betrayal within the ranks of all teams involved.

Within this chaos, Cable's shadowy past came to light, revealing intricate connections to the Summers family and unearthing questions about his lineage. Professor X, tasked to find the truth, discovered that Cable was not to blame for the attack, but it was too late.

While Cable left to deal with the personal troubles and family secrets that were brought to light, X-Force continued under Domino's leadership.

Domino's X-Force

- Bedlam (Jesse Aaronson)
- Caliban
- Domino (Neena Thurman)
- Meltdown (Tabitha Smith)
- Siryn (Theresa Cassidy)
- Sunspot (Roberto "Bobby" Da Costa)
- Warpath (James Proudstar)

Wolverine's X-Force

After M-Day, a new wave of anti-mutant sentiment spread across the globe. The X-Men, led by Cyclops, established the Xavier

Michael Syrett (Order - 5319-1700)

Institute as a haven for the remaining mutants and those who were newly depowered. When the first mutant born since M-Day was revealed, a search for this "mutant messiah" began.

Discovering that Cable had the child in his care, Cyclops put together a covert strike force to find them. Cyclops named the team "X-Force," and Wolverine—due to his combat expertise, pragmatic approach and willingness to make difficult decisions—was appointed its leader.

Black-Ops X-Force

- Archangel (Warren Worthington III)
- Deadpool (Wade Wilson)
- Domino (Neena Thurman)
- Elixir (Joshua Foley)
- Fantomex (Jean-Phillipe Charles)
- Vanisher (Telford Porter)
- Warpath (James Proudstar)
- Wolfsbane (Rahne Sinclair)
- Wolverine (Logan)
- X-23 (Laura Kinney)

Under Wolverine's leadership, X-Force became a hands-on, clandestine strike force tasked with eliminating potential threats before they could harm mutants. The team operated in the shadows, engaging in preemptive strikes against enemies deemed too dangerous for traditional super-hero tactics. Wolverine's no-nonsense approach set the tone for the team's operations.

After a final battle to secure and protect the baby, Professor X convinced Cyclops to call back X-Force and allow Cable to escape into the future with the child to protect her. During the commotion, Professor X was hit in the head by a stray bullet meant for the baby, and Cyclops publicly disbanded the X-Men. However, he kept the black-ops X-Force together in secret, known only to members of that team.

The roster of this new X-Force changed over time, but it always included characters with lethal skill sets and a willingness to operate outside traditional moral boundaries. Members such as Wolverine, X-23, Archangel and others brought a mix of combat expertise, stealth and a readiness to confront threats with a level of aggression that contrasted with more traditional super-hero teams such as the X-Men.

Cable and Hope Return

Cable, now revealed as not only a time-traveling mutant but also the son of Cyclops, returned to the present with Hope Summers, the "mutant messiah" named after a woman in the future who helped raise her as a baby. Hope's return caused intense concern among the X-Men, as she was believed to play a crucial role in their future. The anti-mutant organization the Purifiers staged a large-scale assault on the X-Men in order to kill Hope.

After Cable sacrificed himself to save Hope and push back a siege brought on by the advanced Sentinel Nimrod, Cyclops once again called upon Wolverine to lead an X-Force team that could proactively protect mutants through covert operations. While the black-ops X-Force and Uncanny X-Force both had Wolverine as their leader and featured members like Archangel, Uncanny X-Force had a directive to quietly eliminate threats to the X-Men before they became too big to handle. This team became the shadow strike force working outside the public spotlight, while Cyclops touted the heroic X-Men image to the world.

Uncanny X-Force

- Archangel (Warren Worthington III)
- Deadpool (Wade Wilson)
- Fantomex (Jean-Phillipe Charles)
- Psylocke (Betsy Braddock)
- Wolverine (Logan)
- X-23 (Laura Kinney)

The Uncanny X-Force lineup brought an even darker tone to the already morally ambiguous team. Archangel's ever darkening and deadly persona and Fantomex's technology and illusions complemented the mix of psychic talents and combat expertise Psylocke brought to the group. Wolverine's and X-23's warrior skills and regenerative abilities—along with Deadpool's unpredictability and fighting style—balanced the full team into a force that was ready for what was considered the mutants' greatest time of need.

Psylocke's Uncanny X-Force

Once X-Force was outed to the public as a secret team of mutants, it all but disbanded, working only on special missions. However, Psylocke put together her own X-Force team to prevent the resurrection of Apocalypse.

Psylocke's Uncanny X-Force

- Bishop (Lucas Bishop)
- Cluster (Charlie Cluster-7)
- Psylocke (Betsy Braddock)
- Puck (Eugene Judd)
- Spiral (Rita Wayword)
- Storm (Ororo Munroe)

X-Force saved Archangel from becoming a resurrected Apocalypse and destroy a version of Cassandra Nova from the future. But a rift in the team was formed when Bishop discovered that Storm had erased his memories of hunting Hope Summers. Hope, who was still working with Cable, tracked down Bishop, and the two groups reconciled after an initial fight. The teams reunited as one after rescuing Cable from Stryfe's clutches once again.

A New X-Force Under Cable

Cable, returning to the fold, had a vision of a catastrophic event involving the Avengers, leading to widespread destruction and loss of life. In his vision, while in a potential desolate future, he saw a world turned to ash and dust in which Hope did not survive, all at the hands of the Avengers. Using his temporary precognitive and time-travel abilities, he returned to X-Force with the goal of assembling a team that could prevent this disaster, resulting in what would be known as Avengers X-Sanction.

Art by Salvador Larroca & David Curiel

Cable and X-Force

- Cable (Nathan Summers)
- Colossus (Piotr Rasputin)
- Doctor Nemesis (James Bradley)
- Domino (Neena Thurman)
- Forge
- Hope Summers

Cable and X-Force planned to intervene before the Avengers' scheme escalated, and while they managed to prevent the catastrophe in the vision, there were unforeseen consequences with altering the future, including Cable being infected with the Techno-Organic virus, a full-scale war with the Avengers over Hope Summers and the destruction of the mystical city of K'un-Lun, after which Hope decided to leave the team and try to live life as a normal teenager.

Krakoan X-Force

Mercenaries attacked Krakoa and killed Professor Charles Xavier and a few dozen other mutants. Wolverine (Logan) led an investigation into the massacre and learned that the anti-mutant organization XENO was behind the attack. The newly resurrected Professor X and Magneto, leading members of the Quiet Council of Krakoa, called upon a new X-Force team to defeat them.

Michael Syrett (Order - 5319-1700)

Krakoan X-Force

- Beast (Hank McCoy)
- Domino (Neena Thurman)
- Kid Omega (Quentin Quire)
- Marvel Girl (Jean Grey)
- Sage
- Wolverine (Logan)

Besides this core group, other members cycled through, including Black Tom, Deadpool, Omega Red, Colossus and Wolverine (Laura Kinney). X-Force continued to provide security to Krakoa, including fighting off an underwater parasitic infection, guarding the Krakoan Hellfire Galas and acting as a spy network to prevent human incursion of the island. Unfortunately, X-Force could not stop Orchis and its attack on Krakoa.

LOCATIONS

X-Force headquarters is always moving, always changing, just like the team itself. While many of their rendezvous have taken place at X-Men headquarters, they have had their own key locations of note as well.

Xavier Institute for Higher Learning

The Xavier Institute for Higher Learning was where X-Force was originally conceived, and Cyclops, leading the X-Men many years later, offered up the mansion for X-Force to use as a base of operations.

While tensions between the X-Men and X-Force have fluctuated over time, the Xavier Institute has always been a mainstay for its members, even if some of them weren't always welcome due to their misdeeds, usually resolved after temporary conflict.

Camp Verde Apache Reservation

Camp Verde is the home of X-Force alumni Warpath (James Proudstar) and his older brother, Thunderbird (John Proudstar). When Cable's original X-Force became outlaws, they needed a new home base that was safe and familiar, so they traveled to Camp Verde for asylum and protection.

Murderworld

After leaving Camp Verde, Cable and Domino selected the abandoned amusement-park-styled death trap Murderworld as a new headquarters for X-Force. Once an active trap for super heroes set up and designed by the master assassin Arcade, it was eventually destroyed and left vacant, with a few remnants of the killer robots, laser mazes and holographic traps still around. This Murderworld location was built underneath Manhattan, providing convenient access to the city, making it an ideal hideout for X-Force.

As a base of operations, Murderworld was large enough for training operations and had hidden features within the defunct mazes and carnival structures. Unfortunately, Murderworld didn't last as a permanent headquarters. Arcade discovered it was being used and detonated hidden explosives within the park, destroying most of it and burying the X-Force ship, *PACRAT*, under the debris.

S.H.I.E.L.D. Helicarrier Pericles

The *Pericles* is a decommissioned S.H.I.E.L.D. Helicarrier, used by the Cable X-Force team after his return to the present with Hope Summers. Abandoned in the middle of the Pacific Ocean, the *Pericles* served as a secret headquarters, seemingly out of the purview of those who would wish to hunt X-Force down. The Helicarrier featured private quarters, meeting areas, a teleporter and even semi-sentient cleaning bots.

Cavern-X

Cavern-X was built by Warren Worthington in Sedona, Arizona. It was originally conceived to be a time capsule and museum dedicated to the X-Men in case mutants were exterminated completely. As such, it housed important documents, costumes and other mutant artifacts and was sealed away for the future. To keep Wolverine's Uncanny X-Force team hidden from the world and even Cyclops himself, Wolverine worked with Worthington to convert Cavern-X into a clandestine headquarters for X-Force, equipped with living quarters and all the resources they would need.

Krakoa

The living island of Krakoa was a central location for both the X-Men and X-Force. X-Force served as the go-to protectors and security team for Krakoa.

OPPONENTS

X-Force has faced a variety of formidable foes throughout its history. The team considers most adversaries of the X-Men as their own as well. However, during much of its existence, X-Force has been perceived in a bad light by other heroic teams. In fact, at various points in history, the X-Men, X-Factor, the Avengers and S.H.I.E.L.D. have all been opponents of X-Force.

Stryfe

Stryfe is a powerful mutant and the archenemy of Cable. He is Cable's clone, intricately linked to the experiments of the villain Mister Sinister. His deep-seated hatred for Cable drives his relentless need to exact revenge on his clone and create chaos within the mutant community.

Stryfe's name reflects his nature as a symbol of strife and conflict. He orchestrated the abductions of Cyclops and Jean Grey, leading to a series of events that involved X-Force, X-Factor and the X-Men. His manipulations fueled tensions between the mutants, continually framing X-Force as antagonists in the eyes of the other teams.

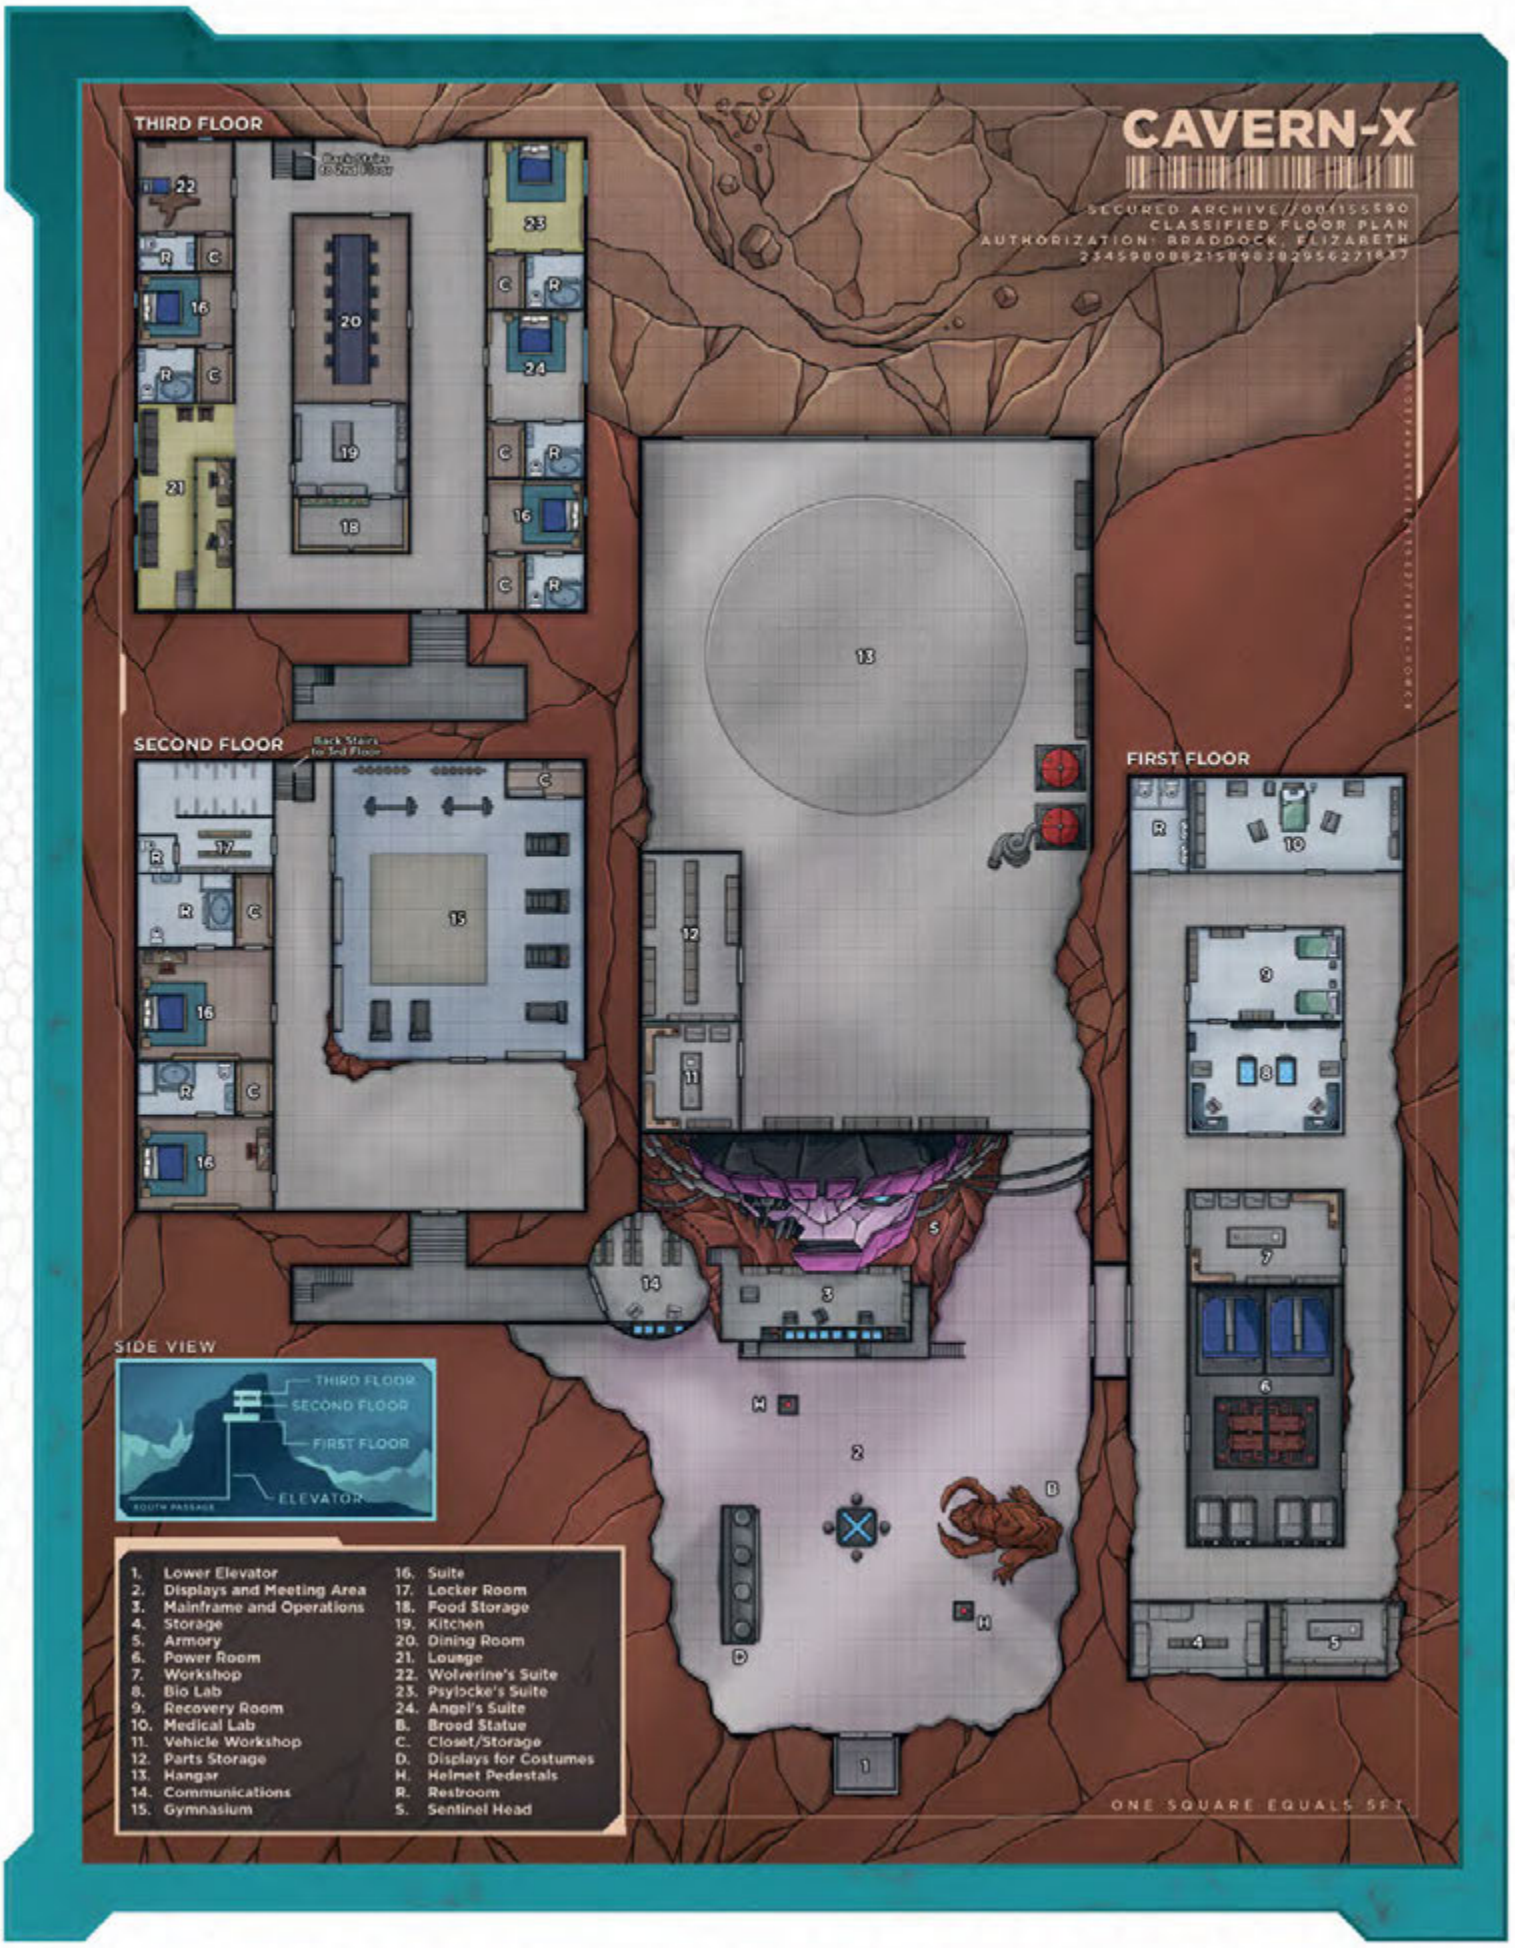
Stryfe leads the Mutant Liberation Front, a militant mutant group with anti-human sentiments, and often uses it to strike out at X-Force.

The Mutant Liberation Front (MLF)

The MLF is a militant mutant group that opposes the X-Men's approach of peaceful coexistence. They had a vendetta against X-Force, largely due to the leadership of Stryfe and his animosity for Cable.

The MLF attempted to assassinate Professor Charles Xavier. That led to a significant conflict with X-Force, as the team sought to protect their mentor from the deadly plot.

ichael Syrell (Order - 53194700)



Michael Syrett (Order - 5319-1700)

The incidents continued with Forearm and Reaper abducting X-Force member Boom-Boom (Tabitha Smith), sparking a rescue mission and battle in which multiple members of the MLF, including Forearm, Tempo and Wildside, fought off the rescue at the MLF Antarctica base. Meanwhile, the MLF also staged a confrontation with X-Force in New York City.

The Purifiers

The Purifiers are a fanatical anti-mutant group known for their extreme methods and violent attacks against mutants. The group was founded by anti-mutant preacher William Stryker after he killed his wife and attempted to murder his mutant baby, believing it to be a monster. The Purifiers became his army of religious fanatics, used to strike out against mutants of all kinds.

Under the leadership of Stryker as well as his grown son Jason, Matthew Risman and Bastion, they have orchestrated lethal ambushes and surprise assaults on X-Force, seeking to eliminate mutant threats according to their radical ideology. They made many attempts to assassinate key mutant leaders, including Wolverine, and they were one of the primary groups to pursue Hope Summers to either control or destroy her. Driven by a genocidal agenda, the Purifiers are a constant threat to the safety and well-being of mutantkind.

The Reavers

The Reavers are a group of cyborg criminals with a particular hatred for mutants. X-Force, especially during its early days, had confrontations with the Reavers in their pursuit of mutant elimination.

The group was formed as a militant organization, originally funded by the Hellfire Club. The Reavers attacked Muir Island, a mutant research facility. This assault was part of a larger scheme orchestrated by the Shadow King, and X-Force joined the X-Men in the battle to protect the island and its inhabitants.

Lady Deathstrike forged a pact with Stryker to resurrect the Reavers and help the Purifiers fight X-Force. As a result of the ongoing vendetta between Cable and the Reavers, they also attacked one of his safe houses, reflecting their relentless pursuit of the mutant leader and their pattern of aggression against X-Force itself.

Selene Gallio and the Externals

The Externals, including Selene—a centuries-old sorceress with a penchant for dark magic and ambitions of immortality—have been opponents of X-Force at various times in their history. One of the most notable instances was when Selene realized that she could use the Legacy virus' power to bring any deceased mutant back to life, and her quest for godhood led her to Genosha to create an undead army. X-Force found themselves in direct conflict with Selene and her forces as they attempted to stop her plans, and just as Selene had raised her army, Warpath performed an ancient Native American ritual to protect his companions. He then drove a knife into her heart, killing her.

PLAYING X-FORCE

Playing a member of X-Force requires a character to have a darker outlook on heroism. Instead of reacting to threats thrown their way, X-Force characters will seek out threats and take the initiative to eliminate them. In situations where many heroes would wait to see if an enemy attacks first while trying to gain information, X-Force characters will strike with stealth and precision, getting their answers after the dirty work is done.

Because of this, X-Force encounters and missions may involve internal conflicts and questions of morality, which can spawn amazing role-playing opportunities and ethical debates between characters. Team members will be put in situations where they face difficult choices together, and these moments will make the team stronger. Additionally, the actions taken by X-Force characters have the potential to spawn new missions, as their tactics will often have consequences that will need resolution.

Theme

X-Force often explores themes of aggression, clandestine action and the darker, more covert aspects of the mutant struggle for survival. Members frequently face morally gray decisions and ethical dilemmas. The team operates in the shadows, making tough choices that may involve secrecy, deception and actions that challenge traditional super-hero morality. This can take a personal toll on team members.

Style

X-Force is known for its proactive approach. In every sense, X-Force is a special-ops team, providing defense and protection of mutantkind, while gathering intelligence and participating in unconventional enemy strikes.

X-Force engages in operations that may involve secrecy, infiltration and actions outside the public eye, unlike the high-profile exploits of the X-Men. The team's activities are not always known to the world, and they don't care about sharing the spotlight with the X-Men as heroes.

Purpose

X-Force's overarching goal is to defend against the extinction of mutants and confront immediate threats that would harm them. They leave future planning and mutant-human relations mostly to the X-Men while focusing on what needs to be done in the now. First and foremost, their purpose is to protect mutants through direct action.

Transportation

For street and local travel, X-Force, given its covert nature, uses underground tunnels and hidden bases to move discreetly within urban environments.

While in recent times the Krakoan gates have allowed easy portal travel between two points, this method isn't always guaranteed for all travel needs.

Some members of X-Force, such as Shatterstar, have access to teleportation abilities, allowing their teams to travel instantly to various destinations without the need for conventional transportation.

PACRAT

PACRAT stands for Personnel Assault Carrier for Recon/Aquatic/Terrain. Cable originally owned and used the *PACRAT* for X-Force exploits, and even after crashing into the X-Mansion, it was restored and used in many missions.

Michael Syrell (Order # 53194700)

The *PACRAT* is incredibly fast and is able to cloak itself from any type of radar.

A new model, appropriately named the *PACRAT II*, became part of the X-Force arsenal. It's supposedly even faster and more fuel efficient than the X-Men's *Blackbird*.

Bluebird

The *Bluebird* is a high-tech Krakoan vehicle that X-Force most often used as a submarine for underwater transport. It is quick and stealthy, with LED lights to see clearly under murky waters. The *Bluebird* is also a fully operational jet with flight capabilities similar to the *Blackbird* and the *PACRAT*. It can launch straight out of the water and into the air. The vehicle appears to be infused with flora but is actually completely grown from Krakoan plants. X-Force used the *Bluebird* on notable missions, including when they pursued XENO members who kidnapped babies from Krakoa and when they finally found the terrorist group's hidden base beneath Genosha. In a later incident, the *Bluebird* was destroyed and then regrown by Black Tom.

JOINING X-FORCE

Recruitment into X-Force has varied throughout the team's history, and different leaders have employed different methods to assemble their roster. Cable, the frequent leader of X-Force, has generally recruited members with military or mercenary backgrounds. He values mutants with combat skills, discipline and a willingness to undertake secret and dangerous missions.

When Wolverine led X-Force, though he too focused on military tactics, he often recruited graduates of the X-Men, focusing on individuals with experience in super-heroics and special operations.

Contrasting these two approaches, Psylocke typically sought out members with diverse skill sets. Such recruits brought unique abilities and perspectives to the team, contributing to its overall effectiveness.

Requirements

The recruitment process for X-Force often revolves around assembling a team with the right combination of skills, experience and personalities to handle confidential and high-stakes missions. X-Force is more discerning than its parent team the X-Men, and it doesn't accept just any mutant into its ranks. However, having a Mutant origin is the first requirement. Additionally, X-Force characters are likely to have either a background in the military or Military as their occupation.

X-Force members should be at least Rank 4.

Getting In

Upon meeting the requirements, a character usually must be invited to join X-Force, rather than applying for a position on the team. While members may be selected based on approval or recommendations from others, the team leaders typically have the final say.

In many instances, characters join X-Force as part of their personal growth arcs. This might involve seeking redemption, proving themselves or dealing with personal challenges that align with the themes of the team. Use this opportunity for role-playing and character development. This can be a great way to incorporate past failures and "fall forward" into a new character arc as a member of the team.

Character Alterations

When a character becomes part of X-Force, the player adds the team to their character sheet under Teams. Once this is done, the character can go on special assignments with X-Force, even if they still belong to the X-Men or their team affiliation is secret.

Powers and Roles

Unlike with traditional X-Men team composition, it is not only okay but often typical that members of X-Force double up on skills or powers. For example, Wolverine, X-23 and Deadpool were all on the same X-Force team even though they all have regenerative powers. All members of a strike force should have stealth and tactical knowledge.

Use friendly competition as role-playing opportunities and teamwork with similar power sets to develop new tactical strategies for unique gameplay.

Training Up

Training up within the ranks of X-Force works similarly to the process used with the X-Men. While exceptions can be made, players should be at least Rank 4. However, sometimes X-Force needs a particular set of skills for a mission, and any character with those talents may be selected for a temporary role on the team.

Duties

Plain and simple: Do the dirty work of protecting mutants so the X-Men can keep their hands clean. Life as a team member means struggle, hard work and risk without any public praise or recognition. Any potential member must accept that their X-Force duty is above all other desires, and while that type of life and responsibility seems rough, it is worth it.

Public Perception

Due to X-Force's clandestine nature, members of the public aren't fully aware of the team. Those who know of their existence—both mutant and human—often have mixed reactions to the morally ambiguous nature of X-Force's actions. Some people appreciate the team's stance in defending mutants, but others question the methods used and the conflicts with established super-hero ethics.

X-FORCE ADVENTURE HOOKS

Sometimes a Narrator needs a little inspiration to help put an adventure together, mostly to get things started.

X-Force

Here are five adventure hooks for X-Force in nearly any era.

- An illegal ring of mutant gladiator fight clubs is thriving in underground New York City. X-Force goes undercover to expose and dismantle this operation, but they get entangled in a web of crime lords, mutant traffickers and a charismatic leader with a dangerous vision for mutant supremacy.

Michael Syrett (Order - 5319-1700)

- A new snake species is discovered with the ability to turn humans into mutants through its bite. Rumors are mounting that its venom is being synthesized to create a "cure" for mutation. Who is behind this research? What happens if this falls into the hands of a group like the Purifiers? How can the team contain the snake species and prevent a worldwide epidemic?
- Reports surface of a phantom mutant haunting an old research facility. This shadowy figure seems to be protecting something inside. What is causing the haunting, and how can the phantom be put to rest? Does it have something to do with the experiments conducted there, which may hold the key to a new threat?
- The Purifiers have gotten their hands on the shell of the Cosmic Cube. Can X-Force retrieve the artifact before the Purifiers find a way to power it up? What other remnants could have been left behind that may pose a threat?
- A mutant with the power to erase memories is targeting influential figures, leaving a trail of political chaos. X-Force must track down this elusive memory leech. What larger conspiracy may be lurking behind this? Who are the potential targets, and what is the best way to protect them? Is the mutant working alone, or are they teamed up with an even bigger threat?

Krakoan X-Force

Here are five adventure hooks for X-Force in the Krakoan era.

- A mysterious fungal contamination begins spreading across Krakoa, affecting both mutants and the island itself. There is a growing concern that this fungus may destroy the Krakoan gates network as well. Can X-Force navigate through mutated landscapes and find the sentient fungal entity seeking to assimilate Krakoa's biological infrastructure? And when they do, how do they stop it?
- A group of settlers from a long-lost expedition to Krakoa is found in a remote area after being presumed dead for decades. Who is behind their disappearance and subsequent return? Have they been manipulated by an external force? How does this even tie to the island's ancient history?
- Unsettling reports emerge of mutated sea creatures exhibiting strange behavior in the waters surrounding Krakoa. The marine life seems to be responding to a mysterious call from the depths, affecting the ecological balance. Is Krakoa somehow causing mutations in the ocean creatures, or is something (or someone) else causing this strange irregularity?
- A section of Krakoa's lush and vibrant Arbor Magna suddenly disappears, leaving behind a void. X-Force must investigate the anomaly, uncovering an ancient mystical force draining the life from the gardens to resurrect a long-forgotten adversary.
- Sudden earthquakes on the island cause alarm, as the tides are rising in mysterious ways. What is causing them, and why are they growing in intensity? Is this an attack by an outside group trying to force an evacuation, or is there a natural cause for the quakes?

MUTANT CLASSES

When Professor X began forging a plan for making his dream come true, he didn't start with a battle team. He started with a school.

He had two main reasons for this.

First, at the time, there were few known mutants in the world, and most of those were dangerous people already long set in their ways. While he tried reaching out, many of them—including Magneto—rebuffed him for his optimism, telling him that his dream would never be more than that.

Second, mutants usually gain their powers during adolescence. That was the time they needed guidance the most and the moment at which Xavier felt he could make the most difference. If he could bring these young mutants under his wing when they were still reachable and needed help, he could have the greatest effect on them.

Thus, Xavier's School for Gifted Youngsters began.

HISTORY

The first class of students entering Xavier's School, of course, became the X-Men. See Chapter 3: The X-Men for more about that team and how they fared.

When the original X-Men were old enough to graduate from high school, Professor X renamed the place the Xavier Institute for Higher Learning to honor the fact that they were no longer *youngsters*. Later, that class nearly died during their first encounter with Krakoa. The first team sent in to rescue them was formed from Moira MacTaggert's students, and half of them were killed, with the others—Vulcan and Darwin—disappearing for years.

Realizing that he had perhaps put too much responsibility in the hands of his students, Professor X formed the next team of X-Men from experienced adults who were long past school age. Eventually, though, he started the school back up again. After all, the young mutants out there still needed to be trained, and he couldn't allow them to fall into the wrong hands at such a tender age.

The New Mutants

Believing that the X-Men had been killed by the Brood, Professor X set about assembling a new team of young mutants for his school. The first five were Cannonball, Karma, Psyche (now known as Mirage), Sunspot and Wolfsbane. He had hoped to instruct them in the ways of using their powers without subjecting them to real danger, but that didn't last long.

Eventually, the new students realized that a Brood Queen had been implanted in Professor X and was controlling him. It had recruited the new class of mutants as prospective hosts for more of its kind. When the X-Men returned home, they helped the New Mutants get rid of the Brood Queen, and they transferred Professor X's mind to a fresh clone body to save him. Upon his recovery, he decided to keep the new class going and even expanded it.

Original New Mutants

- Cannonball (Sam Guthrie)
- Karma (Xuân Cao Manh)
- Mirage (then known as Psyche) (Dani Moonstar)
- Sunspot (Roberto Da Costa)
- Wolfsbane (Rahne Sinclair)

Early New Mutant Additions

- Cypher (Doug Ramsey)
- Kate Pryde (then known as Shadowcat)
- Magik (Illyana Rasputin)
- Magma (Amara Aquilla)
- Warlock

The team proved shaky at first. Karma disappeared and was thought dead for a while, but it turned out that the Shadow King had taken control of her and was using her powers instead. While she was missing, the team picked up a new member—Magma—from Nova Roma, a Roman Empire city that had lain hidden in Brazil for two thousand years. There they rescued her from one of the oldest known mutants in the world: Selene.

Magik—the younger sister of Colossus—joined the school and the team after being rescued from Otherplace, a demonic realm commonly called limbo. She'd spent years trapped there by Belasco before she took over as its ruler and freed herself.

Kate Pryde (then known as Shadowcat) reluctantly joined the team from time to time. As she was already a member of the X-Men, she saw being part of the New Mutants as a step back, even if they were her own age. When working with the New Mutants, she often involved her friend Doug Ramsey, who would later become Cypher.

Not long after, a young Technarch named Warlock crash-landed near the school while fleeing his father, Magus. Ramsey used his powers to communicate with the young alien, and the two of them joined the New Mutants soon after.

Emma Frost had recruited Ramsey to be a part of the Massachusetts Academy instead. She controlled this prep school as part of a scheme to develop a new team of young mutants to serve the Hellfire Club. This team became known as the Hellions, and they regularly clashed with the New Mutants over the years.

Original Hellions

- Catseye (Sharon Smith)
- Empath (Manuel de la Rocha)
- Firestar (Angelica Jones)
- Jetstream (Haroun ibn Sallah al-Rashid)
- Roulette (Jennifer Stavros)
- Tarot (Marie-Ange Colbert)
- Thunderbird (James Proudstar)

Headmaster Magneto

After Professor X suffered a heart attack, Lilandra took him away to treat him with Shi'ar medical technology. Before leaving, he begged Magneto to take over the school, and his old friend gave his word that he would. This caused the original X-Men to leave and form X-Factor, but the New Mutants decided to remain at the school instead.

At one point, many of the New Mutants transferred to the Massachusetts Academy, where Emma Frost used her powers to help them deal with some of the trauma they had been through. They eventually all returned to the Xavier Institute, but with new respect for Frost and the Hellions.

The team wound up battling Mojo, the Ani-Mator and a demonic invasion from limbo known as the Inferno. During this time, Cypher died saving his friends, and Magik was de-aged into a young girl. Horrified by these failures, Magneto quit, leaving the team leaderless.

X-Terminators and X-Force

When the original X-Men formed X-Factor, they set out to rescue young mutants, but they didn't have a school in which to train them. Instead, they sent the children to private schools and trained them in their off-hours.

The X-Terminators

- Artie Maddicks
- Boom-Boom (Tabitha Smith)
- Firefist (Rusty Collins)
- Leech
- Rictor (Julio Richter)
- Skids (Sally Blevins)
- Wiz-Kid (Takeshi Matsuya)

When the group became drawn into the Inferno, they teamed up with the New Mutants. Afterward, the older kids joined the New Mutants, while the younger ones—Artie, Leech and Wiz-Kid—returned to school instead.

Cable took over the New Mutants not long after. He soon realized that the team members were no longer children, and he reorganized them into the first version of X-Force.

Generation X

Time-traveler Trevor Fitzroy attacked the Hellfire Club during a meeting that Emma Frost was having with the X-Men. He and his Sentinels killed most of the Hellions, and Frost wound up in a coma. After she recovered, she and Banshee were charged with schooling the next class of mutants, a group known as Generation X.

This team was headquartered at the Massachusetts Academy, which had been renamed Xavier's School for Gifted Youngsters, in honor of the original school for the X-Men. There the team had to live alongside regular students while keeping their identities as mutants secret, much as the Hellions had before them.

Shortly after the new class began, Gateway teleported Penance (Monet St. Croix) onto the school's grounds in an effort to save her from her brother, the murderous Emplate, who fed on mutant energy. Generation X student M revealed she was, in fact, the merged form of Penance's two younger siblings, Claudette and Nicole St. Croix. The M-Twins—as they came to be known—had morphed together to look like their sister, Monet. They eventually swapped forms, with Monet becoming M and the M-Twins becoming Penance.

Frost's younger sister Adrienne later planted bombs around the school and encouraged anti-mutant bigots to attack the place as she revealed her awful plan. Synch gave his life to save a group of students who had bullied him from one of the explosions. The school shut down in the aftermath, sending all the regular students home. The surviving members of Generation X left soon after.

Generation X

- Chamber (Jono Starsmore)
- Husk (Paige Guthrie)
- Jubilee (Jubilation Lee)
- M (Monet St. Croix)
- Penance (now the M-Twins) (Claudette and Nicole St. Croix)
- Skin (Angelo Espinosa)
- Synch (Everett Thomas)

The New X-School

At the time that Cassandra Nova (who was possessing her brother, Charles Xavier) revealed that Professor X was running a school for mutants out of the family mansion, the number of students at the school was over 150. The numbers rose sharply soon after. During this era, the school had so many students that they built an X-shaped dormitory behind the mansion to accommodate them all.

During this time, the Stepford Cuckoos (Celeste, Esme, Mindee A.K.A. Irma, Sophie and Phoebe) enrolled at the school. They helped put down a student-led riot by a human-hating group known as the Omega Gang.

The Omega Gang

- Glob (Robert Herman)
- Kid Omega (Quentin Quire)
- Radian (Christian Cord)
- Redneck (Vincent Stewart)
- Tattoo (Christine Cord)

This lasted until Magneto—posing as Xorn—destroyed the mansion. As part of that, he drafted in a group of students called the Special Class to help him. Most of them turned against him when they saw how horrible he planned to be.

- Dust (Sooraya Qadir)
- Ernst
- No-Girl (now known as Cerebella) (Martha Johansson)

Academy X

After the mansion was destroyed, Professor X resigned as headmaster, leaving Cyclops and Emma Frost to run the school. Angel provided the funds to rebuild the Xavier Institute better than ever.

To handle such a large student body, Cyclops and Frost broke the students into more than ten squads that trained together and competed against other squads.

A member of the X-Men advised each of the squads in addition to their other duties. The most prominent squads were the Corsairs, the Hellions and the New Mutants.

Corsairs

- Mercury (Cessily Kincaid)
- Prodigy (David Alleyne)
- Rockslide (Santo Vaccarro)
- Surge (Nori Ashida)
- X-23 (now known as Wolverine) (Laura Kinney)

Not long after, Cyclops and Frost decided to send the depowered students home. However, as those students were being evacuated, the Purifiers attacked their escape bus and killed them all.

The Jean Grey School for Higher Learning

While the X-Men headquarters were in San Francisco and Utopia, their education efforts were greatly reduced, but they still had a core group of students. The fact that Cyclops was willing to send them into battle before Wolverine believed they were ready led to a schism within the X-Men.

Wolverine returned to Salem Center with the young mutants, determined to rebuild the mansion and reopen the school, but he changed the school's name to honor Jean Grey, who was thought dead at the time. A grandchild of Krakoa joined them there, integrating itself into the grounds.

Jean Grey Students

- Hellion (Julian Keller)
- Kid Gladiator (Kubark)
- Kid Omega (Quentin Quire)
- Oya (Idie Okonkwo)
- Rockslide (Santo Vaccarro)
- Shark-Girl (Iara Dos Santos)
- Sprite (Jia Jing)

The time-displaced original X-Men joined the school for a while as well.

Kade Kilgore—who had taken over the Hellfire Club—founded the Hellfire Academy to compete with the Jean Grey School. Employing mutant villains like Mystique, Dog Logan, Sabretooth, Sauron and Silver Samurai as faculty, the school hoped to raise the next generation of Hellions to oppose the X-Men.

Michael Syrett (Order #53194700)

The New Hellions

- Glob (Robert Herman) (after Wolverine expelled him)
- Infestation
- Mudbug (Ledbetter)
- Snot
- Tin Man (Owen Backes)

After Wolverine's apparent death, Spider-Man (Peter Parker) taught a class at the school for a while to help the X-Men root out a mole among the students. It turned out to be Ernst, who had made a deal with Mister Sinister to make a body for No-Girl (now Cerebella).

The New Charles Xavier School for Mutants

Not long after, Cyclops—who was a fugitive after going mad with the power of the Phoenix and killing Professor X—founded the New Charles Xavier School for Mutants to atone for his sins, working alongside Emma Frost, Magik and Magneto. It was located in an old Weapon X facility near Roanoke, in the province of Alberta, Canada. After a fallout with Wolverine, Kate Pryde joined the faculty there too, bringing the rest of the time-displaced original X-Men with her.

New Xavier School

- Angel (the young Warren Worthington III)
- Egg (Fabio Medina)
- Hijack (David Bond)
- Morph (Benjamin Deeds)
- Stepford Cuckoos (Celeste, Irma and Phoebe)
- Tempus (Eva Bell)
- Triage (Christopher Muse)

X-Haven and New York City

Storm was in charge of the school when the Inhumans let loose gigantic clouds of Terrigen Mist, which proved deadly to many mutants. At her request, Doctor Strange, Jericho Drumm, Shaman (Michael Twoyoungmen) and the Scarlet Witch moved the Xavier Institute to limbo to keep it safe. The new location was called X-Haven.

When the school was cleared to return, Kate Pryde decided to have it brought back not to Salem Center but to Central Park. To her mind, the school had been isolated for too long, even before its removal to limbo. It needed to become enmeshed in human society, and there was no better place for that than Manhattan. Once the school was established there, Pryde renamed it the Xavier Institute for Mutant Education and Outreach.

During these days, the school once again separated the students into groups. This time, there were three: combat training, ambassador training and real-world practical application training. Jubilee led the last group, which became a new version of Generation X.

Next Generation X

- Bling! (Roxanne Washington)
- Eye-Boy (Trevor Hawkins)
- Hindsight (Nathaniel Carver)
- Kid Omega (Quentin Quire)
- Morph (Benjamin Deeds)
- Nature Girl (Lin Li)

Krakoa

With the rise of Krakoa, all mutant education operations moved there. Children were housed in the Akademos Habitat, a collection of six Krakoan-grown structures on the northern side of the main island in the Pacific. Many of the New Mutants worked there to help train the first generation of young Krakoans.

One particular group of young mutants became fast friends and called themselves the Lost Club. Leo Eng and Escapade joined them later. The informal team often works alongside their teachers—or at least is rescued by them on a regular basis.

New Mutants Teachers

- Karma (Xuân Cao Mạnh)
- Magik (Illyana Rasputin)
- Moonstar (Dani Moonstar)
- Warlock
- Warpath (James Proudstar)
- Wolfsbane (Rahne Sinclair)

The Lost Club

- Anole (Vic Borkowski)
- Cerebella (Martha Johansson)
- Cosmar (Tashi Repina)
- Escapade (Shela Sexton)
- Leo Eng
- Rain Boy (Carl Aalston)
- Scout (Gabby Kinney)

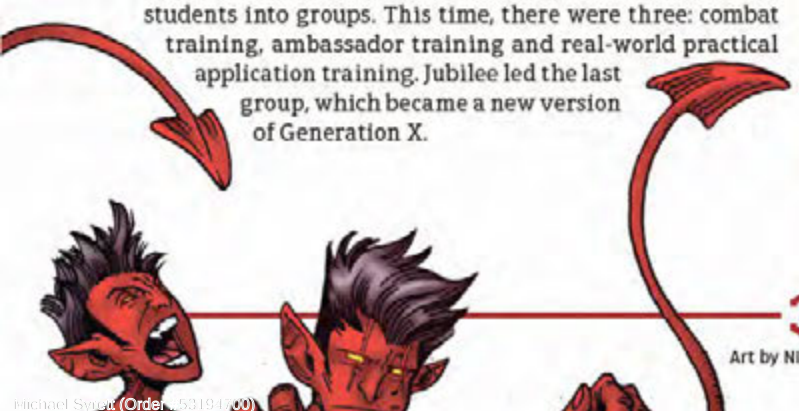
After the Fall

The Xavier Institute no longer exists, and the Akademos Habitat lies empty. Some of the X-Men continue to help find, protect and train young mutants, but they do so privately, away from prying eyes.

LOCATIONS

Mutant schools often do double-duty as headquarters. In the traditional X-Men way, the school is a private academy in which the students both study and live. This keeps things simple, as the students don't have to worry about keeping their escapades secret from those around them. They can focus entirely on their training—at least until danger comes knocking.

In this case, the headquarters should be a school building or campus. This is often kept isolated from its surroundings,



Art by Nick Bradshaw & Morry Hollowell

Michael Syrigos (Order #3319100)

both for the privacy of the students and for the safety of anyone who might live near them. It's not unheard of for training exercises to spill outside the school, and it almost seems inevitable that the place will someday be attacked.

In the other way, the students attend a regular school—perhaps not even the same school as their teammates—and they meet up outside of school hours for training with their powers and teamwork. In this way, they're more like a sports club.

For schools like this, the headquarters is usually just a single building or space, like a dojo. The students might live there when not in school—in which case they need a dormitory and dining facility, at least—but they also could live at their respective homes instead.

The various schools associated with the X-Men have mostly been located at the Xavier estate. However, there have been a few notable exceptions.

The Xavier Estate

Located at 1407 Graymalkin Lane, Salem Center, New York, the sprawling Xavier estate has been in Professor X's family for ten generations. After the death of his father, mother and stepfather, Charles Xavier inherited the place, along with the rest of the family fortune. He eventually used the money to transform the estate not just into a school but also a base for the X-Men.

The place has been destroyed and rebuilt several times. A large portion of the estate was also temporarily transported to limbo before being relocated to Central Park in Manhattan. Magneto destroyed that building while part of the Horsemen of Salvation, a group under the control of X-Man.

During the Krakoan age, the mansion—which had remained in Salem Center—had been long abandoned and overgrown with weeds, but a Krakoan gate had been planted there. A group of the alien Sidri established a nest there, which the X-Men permitted as long as the Sidri guaranteed mutants access to the gate.

The Massachusetts Academy

This private preparatory school was founded over three hundred years ago in Snow Valley, Massachusetts, nestled in the Berkshire Mountains on the western end of the state. Emma Frost took it over and developed a secret school for mutants, concealed within the standard student body. She called her students the Hellions.

After the Hellions were killed and Frost put into a coma, Professor X discovered that she had left him the school in her will. He took over running it until she recovered, at which point she began teaching the next class of X-Men-to-be there, known as Generation X. It's currently called Xavier's School for Gifted Youngsters, taking the original name of the Xavier Institute.

X-Haven

When the Terrigen Mist threatened the lives of all mutants, Storm had the Xavier mansion moved to limbo, where the poisonous gas couldn't reach. This kept the students and faculty safe, as well as giving a place of respite for any other mutants who could reach it.

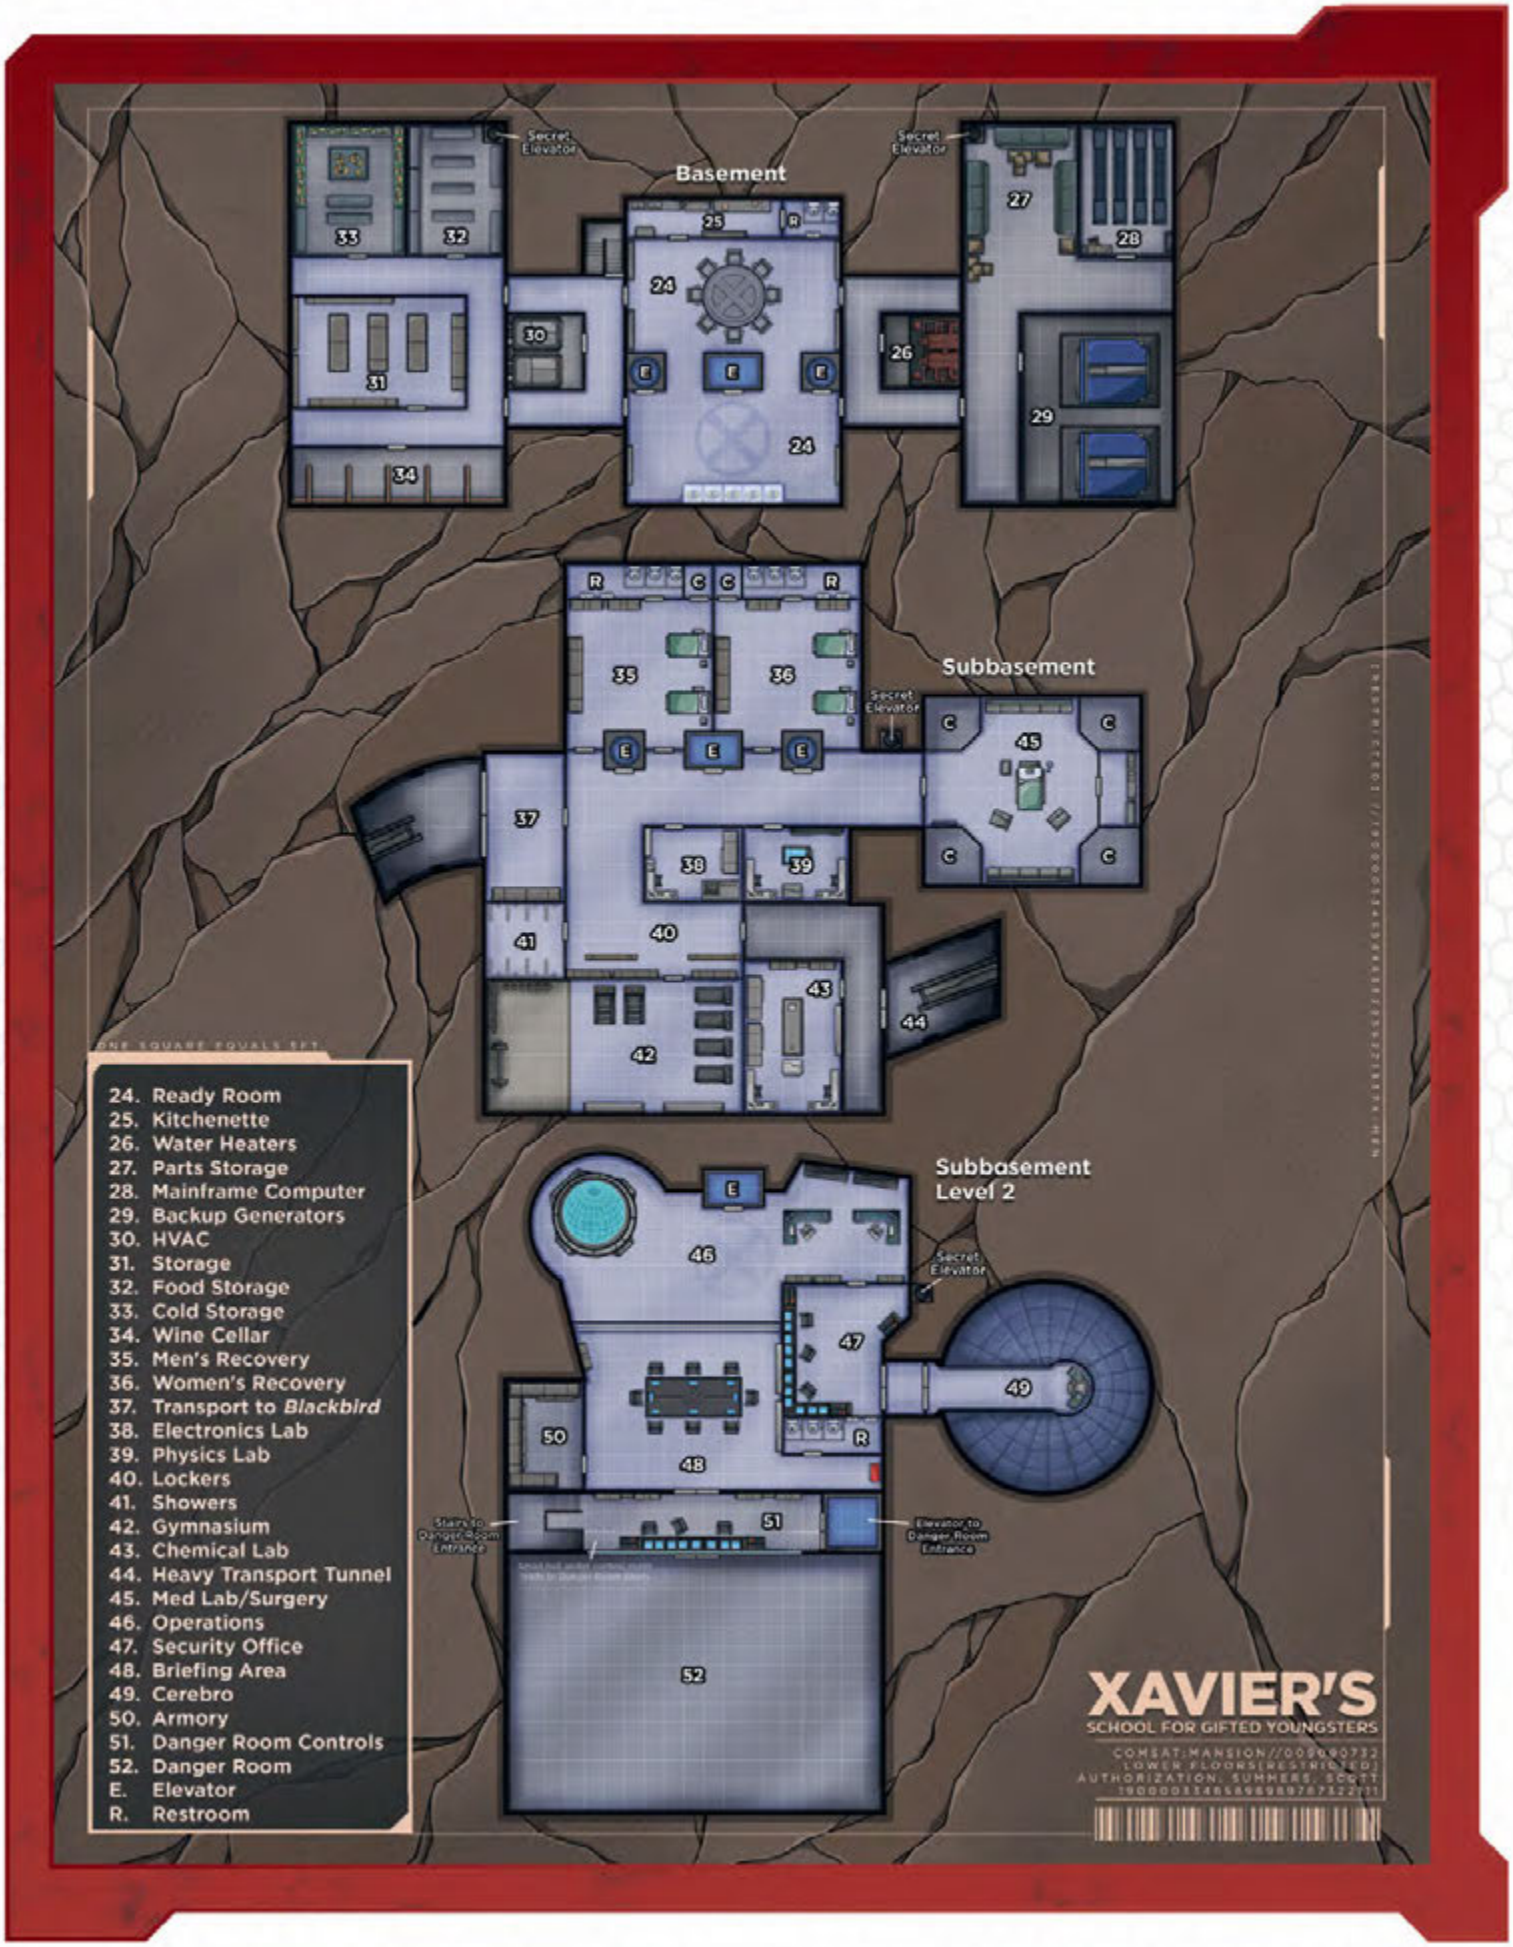
The school did not remain in limbo long. While it offered safety from the Terrigen clouds, the local demon populace posed a constant threat. Magik erected magic defenses to keep such creatures at bay, but once Earth's air was cleared of the threat, it was much better to return.

Central Park

When the mansion moved to Central Park, it functioned not only as a school and headquarters but effectively as an embassy dedicated to improving human-mutant relations.

Michael Syrett (Order - 53194700)

Michael Syrett (Order - 5319-1700)



Michael Syrett (Order - 53194700)

This exposed the students to a great deal more scrutiny than in the past. Still, Kate Pryde saw it as a better way to teach them how to integrate with the wider world, and the school was a success in that sense—even if it also meant it was easier for them to leave campus and find trouble.

Akademos Habitat

The educational facilities on Krakoa were larger than any that mutantkind had ever had before. The students lived and studied in the same section of the main island. There were six habitats, each of which housed a different generation of mutant students, all of whom had formed deep bonds with one another—and perhaps even died for one another before being brought back to life on Krakoa.

Educational Habitats

- **ALPHA House:** New Mutants residence
- **BETA House:** Frost Academy (Hellions) residence
- **DELTA House:** Generation X residence
- **OMEGA House:** Mutant Liberation Front residence
- **SIGMA House:** Jean Grey School residence
- **ZETA House:** New X-Men residence

In addition, the Five—the mutants who ran the process of Krakoan resurrection—lived there in a habitat known as the Pod. Many of the youngest mutant students lived in a habitat called the Fort. Wolverine (Laura Kinney) and Scout had a habitat of their own, which they named the Kinney Residence. There was also a communal habitat called Lifedeath in the center of the area.

OPPONENTS

The various mutant schools under the purview of the X-Men have faced foes of all sorts. On top of the enemies that they encountered simply for being mutants—like the Purifiers—they also clashed with rival teams of young mutants.

Hellions

There have been a number of different versions of the Hellions, starting with the team that Emma Frost created at the Massachusetts Academy around the time that the first New Mutants team formed. The Hellions and the New Mutants started out as serious foes, but over time, they developed a grudging respect for one another. They became rivals rather than enemies.

Art by Nick Bradshaw & Morry Hollowell

Michael Syrett (Order - 5319-1700)

Much of this has to do with the fact that while Frost didn't like the X-Men much, she respected what they were trying to do. This led to her merging her students with those of Professor X and even teaching under his purview.

Hellfire Academy

The latest version of the Hellions sprang from Kade Kilgore's takeover of the Hellfire Club. Whereas Frost had hoped to teach her students to be tough enough to deal with a hard world that hated them, Kilgore—who was barely of high-school age himself—had more selfish aims. He wanted to create the next generation of mutant terrorists to help spur the sales of his company's new Sentinels.

The fact that the faculty at the school could also serve as one of the greatest mutant villain groups in the world was not lost on Kilgore.

Mutant Liberation Front

The time-traveling Stryfe (a clone of Cable) founded the Mutant Liberation Front as a terrorist group. They often came into conflict with the New Mutants and then later with X-Force and X-Factor. They had many disaffected mutants as members, including Rusty (now Firefist) and Skids, who had once been part of the New Mutants.

A new Mutant Liberation Front arose after the fall of Krakoa, led by the Hydra version of Steve Rogers disguised as Captain Krakoa.

The Shadow King

The Shadow King has plagued the New Mutants from their earliest days. As the manifestation of the dark side of human nature, he has been bonded for centuries with Amahl Farouk, one of the first mutants Professor X fought against. Farouk likes to manipulate mutants to pit them against one another, often using smooth words and suggestions rather than threats or violence.

PLAYING AT SCHOOL

Schools have always played a huge role in the lives of the X-Men and many of the other mutant hero teams. They are where the students learn not only how to control their powers and defend themselves, but also how to work together as a team so they can do the most good.

Theme

The mutant schools are where elder mutants have a chance to mold the younger ones into decent people who can responsibly and ethically handle their powers so they can someday join in the efforts to help mutants and humanity live in harmony. Founding a school is an inherently optimistic act. One must believe that they can help bring about a future worth fighting for and that the students can find a place in that world.

A school-based team should focus on that theme, whether the heroes are faculty, students or some combination of the two. While students can certainly have adventures outside the school, there can be plenty of intrigue on campus as well. That can come from rivalries between students, troubled students who struggle to fit in and even assaults from outside the school's grounds.

Beyond that, most of the students at any such academy hope to be called up to the big leagues someday. If they master their powers and prove they can be an invaluable asset, they could find themselves a member of one of the most prominent super-hero teams on the planet. Some students might want only to get through school, integrate into society and have a regular life, but others are shooting for the fame and influence that comes with being part of a marquee operation.

Style

A school-based game usually focuses on the experiences of the students, and it often starts with the day that they first arrive. With many mutant schools, this can be at the time of the school's founding—or when it reopens after having been destroyed. These moments offer fresh starts for the students, much like showing up for the first day at any new high school or college.

Each student often has a secret that they would prefer the other students didn't discover—at least not until they know each other better. This might have to do with their powers or how people treated them back home. Maybe their parents are gone or dead, or maybe they're simply no longer welcome at home. Perhaps they're a clone of someone else. Or it could be that they hurt someone with their powers and are in the school as a means of avoiding prison.

In many schools—especially larger ones—factions or cliques form among the students. Friendships and enmities can develop fast, and students who stick to themselves might be shut out from alliances or lobbied hard to join.

In smaller schools, the students all have to work together, and they don't always get along. When you have to spend every waking moment with the same group of people, even small differences can grow into big problems. If the students are competing for grades, romance or other kinds of attention, these rivalries can spill over into the rest of their lives.

Still, most student teams can find ways to stick together when it counts. It's one thing to be someone's rival at the school and another thing entirely to put them in danger in the field.

If the school doesn't offer enough in the way of direct adventure by sending students on missions, the students often take that issue into their own hands. They might sneak out to find some fun, or they might discover that someone they've been hiding from has finally found them.

Alternatively, the characters can be members of the faculty. In this case, they have to deal with the students and all the troubles they can be in, attract or cause. Many heroes can be incredibly competent when pointed at something and told to break it, but shaping minds and helping build young lives is a whole different kind of challenge.

Purpose

On a student team, the characters have clear goals:

- Learn how to control their powers.
- Learn how to work with others.
- Come back intact and alive.

That last part is vital. If a student gets hurt, they can be confined to the school for their own safety. In severe cases, they can be sent home or pulled out by their parents or guardians.

Michael Syrett (Order - 53194700)

Transportation

Student teams don't always have the same kind of transportation demands as an adult team. Often the adventures come to them rather than the other way around. In times when the students do need to travel long distances, it helps if they have access to a jet or someone with teleportation powers, but such problems are usually something for the faculty to solve.

For shorter distances, it's not uncommon for the students to use a van or even a bus—as long as they have someone with them who knows how to drive.

REGISTRATION

With a regular super-hero team, the characters have to join, but with a student team, they usually have to be admitted. For the sake of the game, the Narrator should work with each player to make sure that their character has a legitimate reason for being part of the school, other than good test scores.

Requirements

To be a student in a mutant school, the character should be a mutant. They don't need to have interesting powers or even know how to handle them yet. This is an ideal place for a Rank 1 character to start.

If the character is part of the faculty, the requirements can be a bit looser. Regular folks without any mutant powers at all can be excellent teachers. Spider-Man taught at the Jean Grey School for a while, for instance, and he is not a mutant. However, he's taught in schools before, and he has some hard-earned lessons about using power responsibly that he's eager to share.

Getting In

To get into a mutant school, the character usually just manifested their powers and is seeking help using them. In some cases, the parents or guardians approach the school for help. In others, the faculty learns about the student and reaches out to them instead.

If the school has something like Cerebro, the faculty can detect the use of mutant powers within the device's range—which can be global. Otherwise, they might have to get a report about the new mutant using their powers to even be aware of them. Then they have to track the potential student down, make sure they're a mutant and—ideally—get permission from the character's parents or guardians to start training them.

Being admitted usually isn't too difficult. Most such schools recruit as hard as they can, and they try to make sure things like tuition aren't a barrier to entry.

Staying in the school is another question. If the student proves to be a danger to other students, the faculty might be forced to expel them. This is usually done only as a last resort, as putting a dangerous student back out into society rarely makes anyone safer.

Character Alterations

A student at the school should take Student as their occupation. A teacher should take the Educator occupation, at least if they're committed to the school. Some teachers at mutant schools don't consider it a vocation as much as a duty they handle among their other obligations, so they might have a different occupation instead.

If the school's nature is secret, those involved may want to take the Secret Identity tag. If the school's mission is common knowledge, they could take the Public Identity tag instead.

Powers and Roles

Schools are a great place for characters with unusual powers. They can learn how to use them creatively and well, and they often don't have to worry much about performing in combat.

If the characters are all students, that keeps the game simple. The Narrator plays the members of the faculty and staff and can keep the characters on their toes directly. If the characters are part of the faculty and staff, they have far more autonomy, and the Narrator should keep this in mind when concocting adventures for the game.

If there's a mix of students and faculty on the team, make sure the players understand how to deal with this imbalance in authority. While students don't always listen to their teachers, they know that they're supposed to and can be punished if they fail or refuse to. Faculty characters should be careful not to abuse such authority, or they could quickly have a revolt on their hands—or perhaps even be fired by their superiors.

Graduating

Student characters can rank up while studying at the school. In fact, they can work their way up in a more granular way, as described in Chapter 12: New Rules. The moment they hit their rank cap makes an excellent time for them to graduate. The school has taught them everything they can, and now it's time for the students to head out on their own.

The Narrator should keep this in mind when running an ongoing series. If the players would like to keep the game going in the school, the Narrator can establish a temporary rank cap for the characters while they attend. They can then establish a higher one after the characters graduate.

Of course, students aren't always forced to leave once they graduate. If they don't have other plans, they could become part of the faculty instead. Many members of the X-Men and the New Mutants, for example, became teachers themselves once their school days were officially behind them. After all, there's no placement program for mutants to get jobs in the outside world.

Duties

Student characters are expected to attend school, or at least training sessions, and to listen to the orders that the faculty gives them. If they cannot abide this, they might make a poor fit at the school.

Teacher characters are expected to train the students and lead them on missions. If they are too busy saving the world in other ways, perhaps they should stick to being a guest lecturer/coach instead.

Public Perception

If the school's nature is a secret, the public likely thinks that the students are just regular kids at an isolated private academy. Most probably regard them as snooty prep students rather than mutants.

If the school is open about its attendees and objectives, the students can be subject to persecution, just the same as any mutant. The catch is that people know where to find them. Most people give such schools a wide berth for fear of being caught up in some sort of super-powered attack or even a training accident. Others see it as an opportunity to plot an assault on a stationary target.

ADVENTURE HOOKS

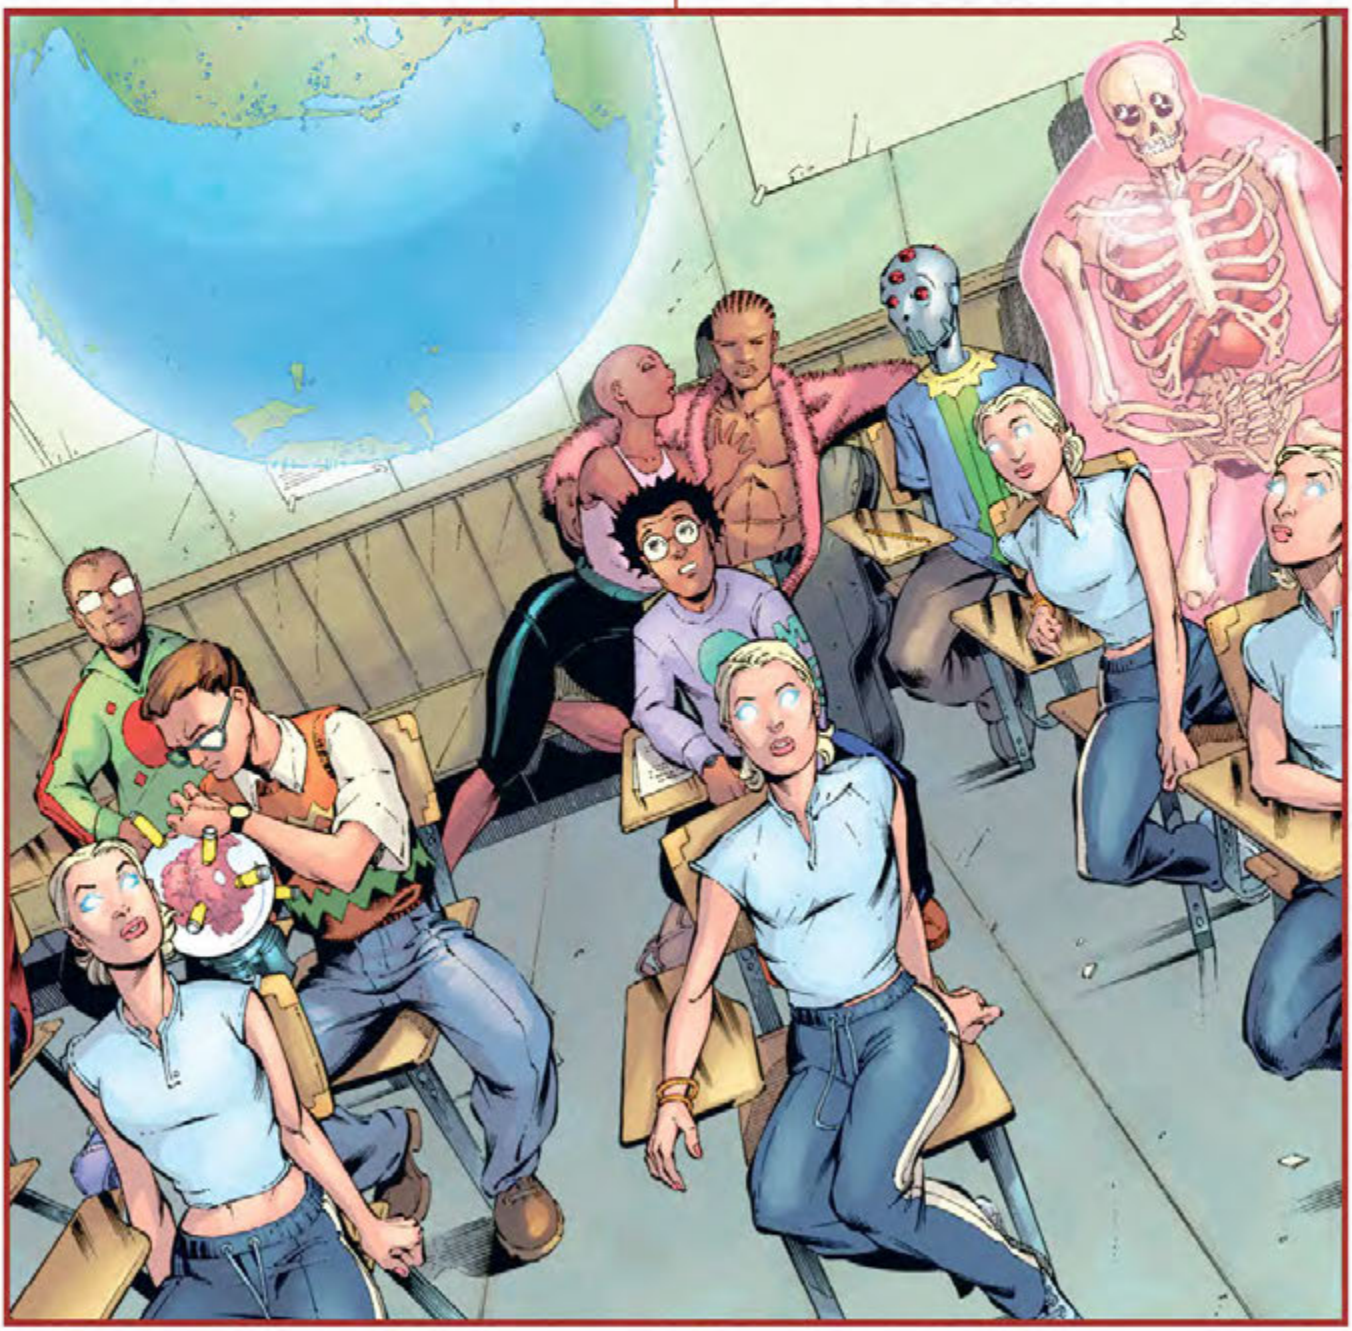
Even the best students sometimes need prompts to help them get started—especially when it comes to an adventure. Here are a number of adventure hooks the Narrator can use for inspiration.

Players might want to skip this section entirely, but peeking isn't really cheating. After all, these hooks are only starting premises. The adventures can go anywhere from there.

Mutant Student Adventure Hooks

Here are ten adventure hooks for student-based teams.

- One of the students is secretly working for an enemy of the school's faculty—or at least they were when they were admitted. Making friends along the way might complicate things, and getting discovered—or confessing to the situation—is sure to.
- During a field trip, someone realizes that one of the students is a mutant. Maybe they saw them use their powers, or perhaps the student must wear a disguise in public and it slipped. The person might start shouting for help, or they might try to blackmail the student for their silence instead. Or maybe they see this as a chance to finally ask someone for desperately needed help.



Art by Keron Grant, Norm Rapmund & Chris Chuckry

Michael Syrett (Order - 5319-1700)

- At least one member of the school's faculty is not who they seem. Instead, they are a telepathically shielded agent who is looking for students to recruit for their own competing school. When a student is approached, do they leave? Or do they stay true to their school?
- One of the students at the school is a time-displaced version of a notorious mutant villain. Did they get there on their own, or did someone haul them there involuntarily? Can they change who they are, and, if so, what does that mean for their current self?
- One of the students is a young clone of a notorious mutant villain. Did the original send them there? Or is this an experiment to see if the school can make a hero out of the same person who otherwise became a villain?
- One of the students is using their powers to cheat on exams. On top of that, they're selling the answers to those exams to other students. Can the characters put a stop to this, and what might the cheaters do to prevent being found out and punished?
- A prank war breaks out among the students, who use their powers to play tricks on one another. But what happens when someone goes too far and hurts one of the characters, either physically or emotionally? Or if one of the characters hurts someone else, hopefully by accident?
- One of the students is not a mutant but has been using Mutant Growth Hormone to pretend that they are. Unfortunately, their supply has dried up, and they're desperate to replace it. They might go into the city to look for more and get into trouble, or, if they're scientifically savvy enough, they might try to harvest it from their fellow students.
- Older versions of the students—or at least some of them—appear from the future to warn them to leave the school before a terrible catastrophe happens. But are they telling the truth? Are they really those students, and did they even travel through time?
- The students find a graveyard with their names on the headstones in a lonely field near campus, and they start to wonder if they are the original versions or cloned replacements. None of them remember dying, but would they? Or is this just some kind of trick?

Mutant Faculty Adventure Hooks

Here are ten adventure hooks for a mutant school's faculty.

- The students are sneaking out at night, but no one can figure out how. They're sticking to their code of silence about it, denying it's even happening, but there are witnesses. Is someone impersonating the students? Or do some of them have powers the heroes don't know about?
- The class is on a field trip into the city that goes horribly wrong. One or more of the students goes missing, and they need to be found before the class can head home. Did they slip away and lose track of time? Or were they attacked or even kidnapped?
- Some of the students don't appreciate how one of the teachers is disciplining them, and they start playing pranks on that teacher to express their displeasure. One of these turns potentially deadly. Did a student make an honest mistake, or are they really trying to kill the teacher? Or is someone else using the pranks as cover for a more serious attack?
- The parents of one student didn't realize that their child was being taken to a mutant school, and they're furious about it. Can the heroes talk sense into them? If they can't, what's going to happen to the student? What might the faculty do if the parents threaten to take the student to a doctor for a mutant cure?
- One of the students turns out to be not a mutant but an Inhuman. If they are turned away from the school, the student's parents don't care about the difference and refuse to take them back. Can the school make an exception for them?
- The faculty is called away on a vital mission. When they get back, the school seems to have disappeared. What happened to it? More importantly, where are the students, and are they safe?
- Younger versions of the faculty show up from the past. They claim the staff must come back with them or the entire school will cease to exist. The heroes don't remember this, but maybe their memories were wiped. Or maybe it's all a trap?
- A student is seriously injured during routine training. Was the Danger Room (or equivalent) system at fault? Did someone tamper with it? Or was this an attempted murder?
- A rival school challenges the heroes' school to a friendly competition. This might be a chance to finally establish better relations with the other school. Or it might cause even harder feelings to develop. But can the faculty turn down the challenge without losing face?
- One of the faculty has gone missing. Did they take off on their own for a secret mission, or did someone vanish them? Could an angry student have been behind it or perhaps an old enemy instead?

MARAUDERS

This chapter covers two Marauders teams that could not be more different: the villainous Marauders intended to be used as opponents, as well as the heroic group led by Kate Pryde.

The infamous Marauders were a team of super-powered mercenary assassins contracted by Mister Sinister. Their mission was to hunt down and murder the Morlocks, mutants dwelling in secret beneath the city of Manhattan, an event known as the Mutant Massacre. Their mandate also included eliminating other do-gooder mutant groups such as the X-Men, the New Mutants and X-Factor. They further targeted friends and family members of said groups.

A new Marauders team was formed after the founding of the nation of Krakoa. Kate Pryde formed these new Marauders, whose purpose was to escort mutants from hostile countries and situations to the safety of the all-mutant nation. The team also protected mutants and refugees from other threats.

TEAM HISTORY

The first team to take the name Marauders was a 19th century street gang led by Cootie Tremble and later hired by mutant geneticist Nathaniel Essex. In 1859, this gang scoured the city of London for "freaks" to display in a private circus. Tremble took Essex, already an infamous scientist shunned by the Royal Society, to see their circus beneath the sewers. Essex concluded these exhibits were nature's failed experiments and hired the Marauders to find him additional subjects for his own, better experiments. One of their targets was the ancient mutant Apocalypse, who easily defeated them but was intrigued by Essex. In the end, Essex was transformed into Mister Sinister and agreed to serve Apocalypse. Oscar Stamp, one of the Marauders, fled with a mute boy from the circus—Daniel—to the USA. There, he adopted Daniel and changed their family name to Summers, originating the Summers family line.

Sinister's Marauders

The next time the Marauders were mustered was by Gambit, in return for an enormous debt he owed Mister Sinister. Unaware of Sinister's goals, Gambit pulled together a roster of hardened killers—including Greycrow, Riptide, Malice and Sabretooth.

The Marauders were involved in several operations before setting foot in the tunnels beneath Manhattan. One of their first tasks was to hunt down and kill Scott Summers' wife, Madelyne Pryor, and abduct their baby boy, Nathan Summers. Pryor was left for dead and the baby boy was abducted and given to Mister Sinister.

The Marauders were next ordered to find and wipe out the Morlocks, because Sinister concluded they were harmful to the mutant gene pool. The first victims were several young children of the Morlock Annalee.

Their next victims included a young Morlock woman named Tommy and Richard Salmons, a Hellfire Club agent who had befriended her. The Marauders tracked Tommy all the way to Los Angeles and terrified her into running back home, unwittingly leading the team to the hidden Morlock tunnels. Appalled by their actions, Gambit fled the Marauders around this time.

Then began one of the bloodiest massacres of the mutant population in New York. The Marauders systematically searched the Morlock Alley and killed everyone they found.

Michael Syrett (Order #53194700)

Meanwhile, another Marauder—the psychic entity known as Malice—possessed Dazzler as a ploy to draw out the X-Men and sow seeds of distrust in their ranks. Later, Malice possessed Polaris and used her against the X-Men too.

After Gambit's departure, John Greycrow led the Marauders who participated in the Mutant Massacre, although Mister Sinister eventually promoted Malice to lead the group.

The Villainous Marauders

- Arclight (Philippa Sontag)
- Blockbuster (Michael Baer)
- Greycrow (John Greycrow)
- Harpoon (Kodiak Noatak)
- Malice (Alice MacAllister)
- Prism (Robbie)
- Riptide (Janos Questad)
- Sabretooth (Victor Creed)
- Scrambler (Kim Il Sung)
- Vertigo (Savage Land Mutate)

The Marauders' murder spree attracted the attention of heroes: X-Factor, the X-Men, the New Mutants and even Thor, Power Pack (and Franklin Richards) and Daredevil.

In the early encounters between the groups, the Marauders' vicious tactics resulted in severe casualties. Numerous heroes—such as Nightcrawler, Colossus, Kitty Pryde and X-Factor's Angel—were gravely injured. Dozens or hundreds of Morlocks were murdered, with many more seriously injured. In response, some of the heroes were driven to vengeance, and several Marauders were killed, including Riptide, Blockbuster and Prism. However, due to the fantastic cloning technologies developed by Mister Sinister, many would reappear again.

New versions of the Marauders have been created over the years by Mister Sinister and others. Most were villains or manipulated by their leaders.

The Morlocks

The victims of the Mutant Massacre were the Morlocks, a group of mutants rejected by modern society due to their frightening powers and often hideous appearances. The mutant Callisto discovered a series of abandoned subterranean bomb shelters and tunnels built in the early 20th century that ran the length of Manhattan Island, reaching as far as New Jersey, Connecticut and upstate New York, near Westchester. She gathered other disaffected, alienated and forsaken mutants and offered them a place to live safe from the fear and harassment of human society. They took the name "Morlocks" after H.G. Wells' subterranean dwellers in *The Time Machine*. They dressed in whatever they could scavenge, often old and torn clothing. Some embraced punk or "ugly" appearances, including allowing the "flesh-sculptor" Masque to twist their features.

During the height of their community, hundreds of Morlocks lived in the Alley, a gathering point in their tunnels. They did not all

cohabit peacefully, however, and camps formed, such as the Drain Dwellers and the Tunnelers, who lived in the disused connecting tunnels.

Morlocks often settled their conflicts with ritual melee combat, with leadership duels being fought to the death.

At various points, Morlocks interacted with the world above, stealing, raiding and even abducting children. Sometimes other mutant outcasts came to live with them. But in a few cases, the Morlocks grew infatuated with those who were on the surface, which led to conflict with the X-Men that culminated in a duel between Storm and Callisto.

Storm won and became the leader of the Morlocks. She invited them to live with the X-Men, but they refused her offer, preferring to stay in the tunnels, though they respected her orders to stop preying on the world above.

The Krakoan Marauders

After the island of Krakoa was established as a mutant homeland, the Quiet Council opened diplomatic channels with the rest of the world. Most countries accepted the terms of the new nation to allow all mutants freedom to become citizens of Krakoa.

However, not every nation allowed mutants freedom, and there were even dissenting agendas within cooperating nations. Many of these took countermeasures to stop the mutants from accessing the Krakoan gates that were created around the world to facilitate mutant travel. Kate Pryde formed the Marauders as a team that could operate outside the official political jurisdiction of Krakoa to rescue mutants.

Originally, Pryde modeled the team after privateers. It was suggested that she chose the Marauders name to reclaim it from Sinister's group, which had inflicted so much pain under the moniker. Their main tactics were naval assaults into areas not accessible by Krakoan gates to extract mutants held captive.

Eventually, Emma Frost (the White Queen) convinced Pryde to take up the seat of the Red Queen in the Hellfire Trading Company and expand the mission of the Marauders to include transporting Krakoan black-market goods.

The first crew was a mix of members selected by Emma Frost to keep Kate Pryde safe, bolstered by others hand-picked by Pryde herself. As their base of operations was Krakoa, the team membership was fluid, with many mutants joining for one-off missions.

The First Krakoan Marauders

- Bishop (Lucas Bishop)
- Iceman (Bobby Drake)
- Kate Pryde (Red Queen)
- Lockheed
- Nightcrawler (Kurt Wagner)
- Pyro (St. John Allerdyce)
- Storm (Ororo Munroe)

After the first Hellfire Gala, a new crew joined Kate Pryde with the same mission of rescuing mutants and delivering Krakoan medicine around the world. The crew was a mix of old and new.

The Next Krakoan Marauders

- Aurora (Jeanne-Marie Beaubier)
- Bishop (Lucas Bishop)
- Fang (Akihiro)
- Kate Pryde (Red Queen)
- Psylocke (Kwannon)
- Somnus (Carl Valentino)
- Tempo (Heather Tucker)

LOCATIONS

The villainous Marauders had no clear headquarters or base, operating on an ad hoc basis. However, they were often found in Mister Sinister's safe houses.

The Alley

The Morlocks lived in the Alley under Manhattan for many years before their community was destroyed. Once the X-Men and their allies defeated the Marauders, various individuals and groups of Morlocks returned to the Alley and were driven out of it time and again.

The Alley is a massive tunnel that runs under much of the island of Manhattan, but it also includes a multitude of makeshift chambers, alcoves, drainpipes, hidey-holes, dens, sleeping areas and living quarters. There are several entrances to the Alley, including:

- A hidden entrance beside the great lawn in Central Park
- A secret tunnel beneath the X-Factor complex
- A tunnel between the Alley and Xavier's estate

The Alley has a natural psionic barrier surrounding the tunnels, which is probably why Professor Xavier did not discover them, even while using Cerebro.

After the Mutant Massacre, Thor Odinson cleansed the tunnels with lightning to remove the bodies and purify the Alley. However, this had the unintended consequence of erasing much of the evidence of the Morlocks' lives.

The Morlock tunnels later became a hiding place for mutants after Orchis' attack on Krakoa.

Krakoa

The Marauders' main operating base is Krakoa, which is where they resupply and return for safe harbor. It is also where they restock from the Hellfire Trading Company, check in with the Quiet Council and enlist new members as missions require.

The Hellfire Trading Company

In the Krakoan era, Emma Frost usurped the leadership of the Hellfire Club and transformed it into the Hellfire Trading Company.

Headquartered in Krakoa and led by Frost (the White Queen), Sebastian Shaw (the Black King) and Kate Pryde (the Red Queen), the Hellfire Trading Company was a legitimate business. It has a London branch and other remote offices around the world.

The company's main products were the medicinal offerings of Krakoa. It also operated a black market to earn the mutant nation additional revenue.

Hellfire Bay

The Marauders' vessels dock in this sheltered bay of Krakoa. Additionally, three structures face one another in a triangle dominating the cliffs of the bay. These were the living quarters of the Hellfire leadership. The Red Keep—interconnected layers of flat red mushroom growth taking up a cliff face to create a comfy interior—is the home of the Red Queen, Kate Pryde. A crystal lattice jutting out over a cliff, the White Palace served as the opulent home of the White Queen, Emma Frost. Blackstone, a monolithic structure created of giant vertical blocks packed together, houses the Black King.

Madripoor

Madripoor is an island in the Strait of Malacca, just southwest of Singapore in Southeast Asia. The capital city is also called Madripoor and consists of the wealthy Hightown and the impoverished Lowtown.

Madripoor has a long history of conflict with the X-Men and is regarded as a lawless place, home to warlords, smugglers and despots constantly vying for power. Currently, the Homines Verendi is nominally in control, but Pryde's Marauders fostered rebellion in Lowtown and bought properties to challenge their leadership.

OPPONENTS

The villainous Marauders could count almost any heroic team as an opponent. Various incarnations of the Marauders fought the X-Men, the New Mutants, X-Factor, Thor, Daredevil and Power Pack. They could be used as foes for any team described in this book. The following people and groups are opponents of the heroic Marauders.

Sebastian Shaw

As leader of the Hellfire Club, Sebastian Shaw was a persistent and deadly enemy of the X-Men. With the pardoning of old grievances in the Krakoan era, Shaw was invited to the leadership of the Quiet Council and became co-leader of the Hellfire Trading Company. Still pursuing an agenda of personal gain on Krakoa, he killed Kate Pryde and attempted to usurp power over the company.

Shaw was brought to heel by the resurrected Pryde and Emma Frost, the White Queen of the Hellfire Trading Company. Claiming to have learned the lesson of putting the needs of the mutant nation above his own, Shaw joined the Marauders for a time, but his narcissistic nature would soon reveal itself.

Homines Verendi

Founded by former Hellfire Club members Kade Kilgore, Wilhelmina Kensington, Manuel Enduque and Maximilian Frankenstein, Homines Verendi uses its wealth and political power to oppose mutantkind. Chen Zhao, a Taiwanese billionaire, later joined the organization's ranks.

Based in Hightown, Madripoor, Homines Verendi hired assassins and other agents to assault Pryde's Marauders. They also waged a political and economic war against the Hellfire Trading Company. They were largely unsuccessful but nonetheless kept trying.

Eden Rixlo

A former Nova Corps operative turned smuggler and petty galactic criminal, Eden Rixlo goes by a few aliases, such as Deen Lorix and Bjan. He was contracted by Emma Frost to hire his ship—the *Mercury*—for a mission. Upon completion, Emma wiped his memory and commandeered his ship. Rixlo has been out for revenge ever since.

Brimstone Love

The sadistic and mysterious Brimstone is the founder of the Theater of Pain, a performance art group delighting in the suffering of others for both pleasure and profit. Seemingly destroyed in a fight with Fang (Daken), Johnny Dee and Lockheed, Brimstone was later given sanctuary in the Limbo Embassy. He was seemingly killed when Orchis invaded Krakoa.

FIGHTING THE MARAUDERS

Mister Sinister's team of hardened killers serves as a model for Narrators to challenge any team of heroes of appropriate rank. Narrators can use these Marauders directly as opponents for their players, especially if the players are using mutant or mutant-allied heroes, or the Narrator can use them as inspiration when designing their own antagonists.

The Marauders' military-style tactics, sadism and merciless brutality cause them to stand out. They aren't trying to enact a political agenda, nor are they driven by revenge or greed. They do suggest they are mercenaries for hire, and thus motivated by a payday, but they also seem to relish the wet work they are contracted to perform.

Theme

At one point, John Greycrow summarized the Marauders' philosophy as: "The only good mutant is a dead mutant—'less of course it's us!" indicating a level of bigotry and misanthropy, as well as casual cruelty that drives him and likely other members of the team. These are challenging ideas to explore if the players' heroes get a chance to engage with Greycrow or another member outside the theater of battle. What has driven the Marauders to these cynical and sadistic beliefs? What hold does Mister Sinister have over them, and how do they truly feel about him and his agenda?

If a player suggests playing a reformed Marauder—such as Gambit—as part of their character's backstory, the Narrator is encouraged to work with them to find reasons that they were once a part of the team, and then broke free to forge their own destiny. For example, Gambit needed help to temper his uncontrollable powers, and in exchange he agreed to help Mister Sinister. But when the stakes grew too high, Gambit fled, risking the consequences.

Style

The Marauders have a mercenary attitude: no hard feelings, nothing personal. They see themselves as pros and consider themselves among the best. However, some—like Arclight and Sabretooth—enjoy the challenge of taking on skilled opponents (the X-Men, Wolverine) to test their mettle. Other Marauders, like Riptide and Blockbuster, are simply bullies who enjoy inflicting pain and misery.

The Marauders have a callous streak and are almost entirely without empathy.

The Narrator should showcase different attitudes and motivations for the various members of the Marauders so they aren't all one-note villains. Creative players who pay attention could put these attitudes to use. They might even be able to drive a wedge between the villains (such as how Sinister's plan was too cruel for Gambit, or how Sabretooth prefers to be a maverick loner, which might be something they can leverage against him).

Purpose

The Marauders' purpose is to get paid for a job well done—the nastier and bloodier, the better.

- To serve Mister Sinister's agenda.
- To prove they are the best.
- To be feared and respected.

Transportation

The Marauders have no special forms of transportation. They clearly have the resources to travel as needed with whatever gear they require.

PLAYING THE MARAUDERS

Pryde's Marauders are a rescue team first and foremost. They identify mutants who are in danger and move to save them, not letting any force or nation stand in their way. They are willing to use illegal methods to achieve their goals.

Theme

The Marauders rescue mutants imprisoned anywhere, setting aside political ramifications. They are less concerned with achieving the dream of living in harmony with humans and more focused on putting mutants first.

Style

The prevailing ethos of the Marauders is one of privateering. They readily take from, invade and attack anyone or any political entity to rescue mutants. There is no compromise in this mission statement.

Purpose

To unequivocally save mutants and grant them freedom no matter where or when, whatever the circumstances.

Transportation

The Krakoan Marauders have special ways of getting around.

Krakoan Gateways

The Marauders installed Krakoan gates on board their ships for strategic and tactical movement. These allowed them to retreat to Krakoa or summon reinforcements as needed. However, unlike every other mutant, Pryde could not use Krakoan gates in those days. Forge noted that her phasing power could disrupt every technology she had encountered until this one, which disrupted her, instead.

The Marauder

The *Marauder* was an armed naval vessel captained by Kate Pryde on behalf of the Hellfire Trading Company. The ship also served as home base when the Marauders were adventuring away from Krakoa.

The *Marauder* was armed with multiple close-fire machine guns, dual forward fixed guns and three large turreted naval guns. The ship could reach speeds of 300 knots in open water. Additionally, it also had Krakoan gateways on board for fast transport of people and goods to and from Krakoa.

The *Marauder* was destroyed after the first Krakoan Hellfire Gala.

The New Marauder

After the original *Marauder* was destroyed, the Marauders were given the *Mercury* to use. The ship was later renamed the *New Marauder* and ownership passed from Emma Frost to Kate Pryde.

The *New Marauder* is psionically controlled via an adaptive neural interface that molds itself to its user. For example, when Christian Frost helmed the ship, the controls took the

Michael Syrett (Order - 5319-1700)

shape of a piano. The *New Marauder* is also able to change form. So far it has taken shape as a UFO, submarine, battle cruiser, medieval carrack and spaceship. The ship is capable of flight, space travel, underwater movement and terrestrial cruising.

The ship also has ample space for a large crew and cargo.

JOINING THE KRAKOAN MARAUDERS

The Krakoan Marauders work hard to save mutants around the globe and serve the mutant homeland. A member of the Marauders should be prepared to face danger on the high seas, political intrigue (across the globe and inside the Hellfire Trading Company) and opportunities to become heroes of the new mutant nation.

Requirements

The Krakoan Marauders, much like the X-Men, generally only accept mutants on the team. Exceptions could be made as the membership is largely determined by the group's captain.

Getting In

If the captain says you're in, then you're in.

As a rule of thumb, characters should be Rank 3 or 4 to join, although certain outliers (like Lockheed or Emma Frost) might be given exceptions.

Character Alterations

Characters who become members of the Marauders should add the team to their character profile. They can also mark the *Marauder* (or the *New Marauder*) as their base of operations.

Powers and Roles

The team tries to have a mix of skills and powers to call on in their mission to save mutants. Some, like Storm, have strong, flashy powers that shock and awe their enemies. Members like Bishop use their skills to plan and execute stealth missions throughout the world. And some members, like Pyro, are just good brawlers. Each contributes to saving trapped mutants and punishing those who oppose Krakoa.

Training Up

The Marauders recruit experienced mutants who can aid in their missions. Lower-ranked heroes could also be recruited if they offer skills that can be of use. Completing assignments with the Marauders is a good way to learn skills and advance in rank.

Duties

Marauders are expected to take part in life-saving missions. This means most members will spend a significant amount of time on the high seas, away from their Krakoan homes. During that time, members are expected to follow the orders of the captain.

The captain and a few other members are sometimes involved in the corporate politics of the Hellfire Trading Company. Kate Pryde and Bishop have both been officials in the company, operating as the Red Queen and the Red Bishop. For most of the Marauders' history, they were allied with the company's White Queen, Emma Frost, and often at odds with the Black King, Sebastian Shaw.

Public Perception

In one of their first acts, the Marauders released a video stating their intent to save any mutant who was being kept from Krakoa. Anti-mutant nations see the team as pirates with no respect for national boundaries or laws. For mutants—both on Krakoa and throughout the world—the Marauders are liberators who save mutant lives.

MARAUDERS ADVENTURE HOOKS

Here are some adventure hooks to get the ball rolling for the Krakoan Marauders.

- The heroes pick up a distress call that mutants are being held in a prison camp in a supposedly mutant-friendly nation. Has the government turned against Krakoa, or is another entity at work here? Under the cover of darkness, can the Marauders save the mutants and reveal the true oppressors?
- A call for help turns out to be a lure to trick the Marauders into attacking a national entity and drawing them into conflict with Krakoa. Who would be behind such a ploy? What do they hope to gain?
- After a mysterious natural disaster, the Marauders are tasked with bringing life-saving medicine to an isolated community. Their mission of mercy faces tough opposition from local pirates looking to steal the cargo. Can the Marauders reach the community in time? Who is looking to buy the Krakoan plants from the pirates? And were they somehow involved in causing the natural disaster?
- The Marauders are called to assist in Madripoor's Lowtown, as local mutants are being targeted by gangs of thugs. Those thugs have serious backing—and weapons. Who is backing this gang? Why are they targeting the Marauders?
- The Quiet Council has tasked the Marauders to protect the shores of a mutant-friendly nation and increase goodwill for mutants. When a refugee seeks shelter with the Marauders, can they navigate deep political waters? Can they save lives without causing an international incident?

ALPHA FLIGHT

Alpha Flight is Canada's premier super-hero team. Unlike most American super-hero teams, Alpha Flight was first and foremost a creation of its country's government, and over the decades it at least nominally operated in service of that government.

Alpha Flight has included many mutants on its roster, although it has never been an exclusively mutant group, such as the X-Men or X-Factor. However, from the very beginning it had connections to key players from the mutant world, and as such has long been involved in mutant affairs. The team came into conflict several times with the X-Men over various issues—primarily revolving around whether Wolverine was Canadian government property—but through the years, the two teams grew close ties and became allies.

Alpha Flight changed, evolved and even dissolved as members perished or quit. At one point, while designated as Omega Flight, it included non-Canadian heroes too. Generally, however, the team concerns itself with missions and events in the Canadian territories, keeping the True North strong and free.

TEAM HISTORY

James MacDonald "Mac" Hudson was a Canadian engineer with an affinity for cybernetic systems. When his employers in the Am-Can Petroleum Corporation wanted to weaponize an armored suit of Hudson's design, he went to the Canadian government for help. The government resolved the conflict with Am-Can and invited Hudson to direct Department H—H for Hudson—a new research and development arm of the Ministry of Defense.

Department H was responsible for sanctioning, supporting and monitoring all superhuman activity in Canada. Shortly after, Hudson married Heather McNeil, and while they were honeymooning in the Canadian Rockies, they discovered the amnesiac feral mutant Logan (Wolverine). They helped Logan regain his humanity, and he joined Department H as its first operative, codenamed Weapon X.

The first team Hudson put together—simply called the Flight—was a way to give Canada a super-hero resource similar to the Fantastic Four or Avengers. However, they were under control of the government, whereas most teams in America were independent operators. Hudson served as the team's administrator and acted as command and control remotely.

The Flight

- Groundhog (Sean Benard)
- James Hudson
- Saint Elmo
- Smart Alec (Alec Thorne)
- Snowbird (Narya, Anne McKenzie)
- Stitch (Jodi Furman)
- Wild Child (Kyle Gibney)
- Wolverine (Logan)

Flight's first mission saw them in action against the mad scientist Egghead when he tried to launch nuclear missiles

Michael Syrett (Order #53194700)

out of Ontario, Canada, to attack New York City. Egghead and his henchmen—Solarr, Porcupine, Rhino, Swordsman (Jacques Duquesne) and Power Man (Erik Josten)—were defeated but at the cost of Saint Elmo's life.

Due to the poor performance review of the first mission, Flight disbanded, and Hudson amended his plans, creating a three-team system: Alpha Flight, Beta Flight and Gamma Flight.

Alpha Flight

In the new structure, the premier team was designated Alpha Flight. The Beta Flight team was reserved for backup members, and Gamma Flight was the training team for new recruits. After finishing his super-powered suit, Hudson became the team's field leader as well as the costumed hero Vindicator.

Alpha Flight

- Aurora (Jeanne-Marie Beaubier)
- Northstar (Jean-Paul Beaubier)
- Sasquatch (Walter Langkowski)
- Shaman (Michael Twoyoungmen)
- Snowbird (Narya, Anne McKenzie)
- Vindicator (James Hudson; later named Guardian)

The first outing of Alpha Flight saw them on a mission to retrieve Wolverine from the X-Men. Shaman forced the X-Men's plane to land in Calgary. After a brief fight, Wolverine agreed to turn himself in to Alpha Flight. The X-Men were escorted out of Canadian territory and were about to turn around to rescue Wolverine—who then revealed he had escaped and was on the plane home with them.

The next iteration of Alpha Flight appeared sometime later, with members moving up from Beta Flight to the main team. After James Hudson was reportedly killed in action (but actually hurled through a time/space rift and trapped in suspended animation), his wife (Heather Hudson) took on his role as Vindicator, then later renamed herself Guardian.

After many missions and adventures, Alpha Flight was disbanded, and Department H shut down. Still seeing a need for a super-hero team in Canada, though, the members reunited as an independent entity and continued operations.

Beta Flight

- Box (Roger Bochs)
- Flashback (Gardner Monroe)
- Marrina (Marrina Smallwood)
- Puck (Eugene Judd)

Gamma Flight

- Diamond Lil (Lillian Crawley)
- Madison Jeffries
- Smart Alec (Alexander Thorne)
- Wild Child (Kyle Gibney)

Many New Beginnings

Department H was eventually restarted under General Jeremy Clarke, and a new team was formed to serve Canada, including a restored James Hudson.

Heather's Alpha Flight

- Aurora (Jeanne-Marie Beaubier)
- Guardian (James Hudson)
- Marrina (Marrina Smallwood)
- Northstar (Jean-Paul Beaubier)
- Puck (Eugene Judd)
- Sasquatch (Walter Langkowski)
- Shaman (Michael Twoyoungmen)
- Snowbird (Narya, Anne McKenzie)
- Vindicator (Heather Hudson)

This Department H was run by more sinister leadership with an interest in militarization of super heroes and ambitions of global power and influence. Eventually the team broke up once these darker goals became apparent to the heroes.

General Clarke later arranged for the reactivation of Department H and Alpha Flight. When Hudson learned of unethical experiments being conducted in the secret halls of Department H, he refused to cooperate. Clarke, in turn, downloaded Hudson's memories into a semi-organic synthoid, and built a new team around this synthoid Guardian.

The Synthoid's Alpha Flight

- Flex (Adrian Corbo)
- Guardian (clone of James Hudson)
- Madison Jeffries
- Manbot (Bernie Lachenay)
- Murmur (Arlette Truffaut)
- Puck (Eugene Judd)
- Radius (Jared Corbo)
- Sasquatch (Walter Langkowski)
- Vindicator (Heather Hudson)

When the alien Plodex captured most of Alpha Flight, Sasquatch assembled a new team to rescue them. The new team rescued the captured heroes but also discovered a ship full of unhatched Plodex eggs. The freed Alphans decided to return the young Plodex to their home planet, to raise them in peace. Sasquatch's team, along with a young Plodex named Mar, remained behind to defend Canada.

After defeating the threat alien, the team became involved in time-travel scenarios when a former enemy, Flashback, pleaded with them to go back in time to prevent his death. However, history grew worse and worse as they meddled with events. Eventually, a past version of Shaman helped stabilize the timestream.

Soon after, Centennial and Nemesis perished, and Mar and Yukon Jack left the team. At that point, Guardian, Vindicator, both Pucks, Major Mapleleaf, Sasquatch and Shaman formed the core of the team.

When the mutant Michael Pointer, imbued with the power of the Collective, rampaged south from the Alaskan border, Alpha Flight was sent to stop him. However, Pointer was too powerful and killed all the active members. Only Sasquatch survived the encounter.

From Omega to Alpha Again

Later, after the events of the first superhuman civil war, the Canadian Secret Intelligence Service (CSIS) encouraged Sasquatch to form a new team to protect the Canadian borders from fugitives fleeing the U.S. This team was composed primarily of Americans and called Omega Flight.

Omega Flight

- Arachne (Julia Carpenter)
- Beta Ray Bill
- Michael Pointer
- Sasquatch (Walter Langkowski)
- Talisman (Elizabeth Twoyoungmen)
- U.S.Agent (John Walker)

As the events of the superhuman civil war played out, Omega Flight disbanded.

During the Chaos War (in which the Chaos King [Amatsu-Mikaboshi] battled Nightmare), the dead members of Alpha Flight escaped from the underworld and joined the living remaining members to form another version of the team.

Chaos War Alpha Flight

- Aurora (Jeanne-Marie Beaubier)
- Guardian (James Hudson)
- Marrina (Marrina Smallwood)
- Northstar (Jean-Paul Beaubier)
- Sasquatch (Walter Langkowski)
- Shaman (Michael Twoyoungmen)
- Snowbird (Narya, Anne McKenzie)
- Vindicator (Heather Hudson)

They fought the Great Beasts—after Sasquatch had released them—in order to kill the Chaos King. After the defeat of the Chaos King, the resurrected members remained alive. Shortly after, Puck (Eugene Judd) rejoined the team.

The team's fortunes took a turn for the worse when the Unity Party was elected to form the Canadian government and gained control of Department H. The Unity Party then had the members declared traitors. Soon enough, Alpha Flight discovered that the Master of the World was behind the Unity Party and defeated him.

Alpha Flight Interstellar Defense and Diplomacy Initiative

Alpha Flight was then established as a multinational and interplanetary agency with the goal of protecting Earth from extraterrestrial threats. They were based in the Alpha Flight Low-Orbit Space Station, while the ground crew operated from the first wing of the Triskelion, a New York City complex that also housed the Wakandan Embassy and a super-hero team known as the Ultimates.

The Alpha Flight Space Program was overseen by the Board of Governors, representatives of different nations—and even other planets—that shared the program's interests. Board members included Black Panther (Wakanda); Henry Peter Gyrich (USA); Philippe Beaulieu (Canada); Mentor (Shi'ar); Bar-Konn (Kree); a Rigellian ambassador; and a Kronan ambassador.

Carol Danvers, commander of Alpha Flight at the time, advocated that the team use an Inhuman named Ulysses Cain, who had precognitive abilities, to tackle disasters before they happened. Despite the controversial nature of the plan, the board agreed to develop a defense force based around Ulysses' predictive powers. They tried to make this strategy as morally defensible as possible by bringing in a team of lawyers, diplomats, physicists and ethicists to train and consult Ulysses, as well as ensuring that he was awash in up-to-date international news and intelligence reports.

During this time, Alpha Flight claimed they had the power to monitor, capture and detain suspects, whom they would hand over to appropriate government authorities for legal processing. This initiative was maintained until Ulysses Cain vanished.

During this period, Black Panther also sent a division of Alpha Flight to search for the origin of the Mena Ngai (the Great Mound—the source of Vibranium in Wakanda). Their explorations in the Vega System took them through a temporal anomaly two thousand years into the past, where they established the origins of the Intergalactic Empire of Wakanda.

In another event, Captain Marvel formed a task force to locate a missing Hulk (Bruce Banner), who had been imprisoned by General Fortean. Walter Langkowski (depowered at this point) and Puck headed up this force, called Gamma Flight. They had to deal with the Hulk and the One Below All, and in the aftermath, Puck invited the Absorbing Man (who had aided them) and Titania to join Gamma Flight.

All the Flight teams were grounded when the space station was destroyed during Hydra's takeover of the United States, when Alpha Flight turned the station into a bomb to take down the Planetary Defense Shield.

Alpha Flight Today

The team was later revived as Canada's top super-hero team, with many of the original members returning. They played a role helping mutants escape and thwarting the mandate of Department H and Orchis to arrest mutants in Canadian territory.

The New Alpha Flight

- Aurora (Jeanne-Marie Beaubier)
- Fang (Akihiro)
- Guardian (James Hudson)
- Marrina Smallwood
- Nemesis (Heather Hudson)
- Northstar (Jean-Paul Beaubier)
- Puck (Eugene Judd)
- Shaman (Michael Twoyoungmen)
- Snowbird (Narya, Anne McKenzie)
- Walter Langkowski (in Leonard Samson's body)

LOCATIONS

Alpha Flight traditionally operates from government-funded bases, specifically under the mandate of Department H.

Department H (Ottawa)

Department H's main headquarters are in Ottawa (the nation's capital), with regional offices in Toronto, Winnipeg, Vancouver and other cities. Department H additionally has many hidden labs and training facilities scattered across the country, which the different Flights have used. The main HQ is a multibillion-dollar base with administration offices, research labs, training facilities and departments responsible for intelligence, weapons development and super-hero operations. Department H also hires the best talent available in terms of scientists, agents and super heroes across Canada.

Tamarind Island (British Columbia)

Located off the southern tip of Vancouver Island, this small island is a beautiful natural reserve with only a single large mansion. The island and mansion were the inheritance of Walter Langkowski. When the team rebuilt after the death of the original Guardian, Walter offered the island as the new base of operations for Alpha Flight. A notable advantage of operating from this location was that Alpha Flight was not under the thumb of Department H.

The mansion was refitted for operations and renamed Mansion Alpha. It was eventually destroyed in an attack. When funding returned to Department H, the team relocated back to Ottawa.

Alpha Flight Low-Orbit Space Station

The Alpha Flight Low-Orbit Space Station was positioned in geosynchronous orbit above the Triskelion in New York. The station was equipped with many modules to accommodate the duties it served. One module served as Alpha Flight's quarters, while others housed heroes from a multitude of nations. Additionally, there were observation, vehicle, research, detention, medical, communications and many other modules to help their collective mission of being the first line of defense against extraterrestrial threats to Earth.

OPPONENTS

The Great Beasts

The Great Beasts are powerful other-dimensional entities who have tried to invade Earth many times. Thousands of years ago, they were banished to another dimension by the northern Canadian gods, but they are always looking to escape and rampage across Canada.

The Beasts have magical powers to possess people, create energy attacks, summon blizzards and use other abilities based on their natures. They are malevolent, corrupted supernatural spirits.

Narrators may wish to present the Great Beasts as Rank X characters. However, in certain cases, they manifest as more physical monsters and could be defined as Rank 4, 5 or even 6 to represent their physical presence and powers on Earth. They often possess humans to manifest in this dimension.

The Great Beasts

- Kariooq, the Corruptor
- Kolomaq, the Beast of the Snows
- Neooqtoq, the Ravager
- Ranaq, the Great Devourer
- Somon, the Artificer
- Tanaraq
- Tolomaq, the Fire Beast
- Tundra, the Land Beast

Jerome Jaxon and First Omega Flight

The former vice president of Am-Can Petroleum, Jerome Jaxon, blamed James Hudson for ruining his life when Hudson stole the Guardian suit and defected to Department H. Having nothing else to live for, Jaxon focused his life on destroying Hudson and—by extension—Alpha Flight.

With funding from Roxxon Oil and help from Delphine Courtney, Jaxon was able to control members of Beta Flight and Gamma Flight to create a secret group he called Omega Flight (made up of Box, Diamond Lil, Flashback, Smart Alec and Wild Child). Jaxon used them to carry out his plans to kill James Hudson.

Master of the World

Born a caveman some forty thousand years ago, Eshu was lured and captured by the alien Plodex. Over thousands of years, the Plodex experimented on him and transformed him into an immortal superhuman. Additionally, Eshu mastered the technology of the Plodex and gained control of their ship to use as his base.

It's unclear if Eshu had symptoms of megalomania before his treatment by the Plodex or developed it afterward, but by modern times, he had (apparently unironically) renamed himself the Master of the World.

The Plodex

An advanced alien race that spread throughout the universe, the Plodex conquered solar systems by using their bio-ships to seed planets with eggs that combined Plodex genes with whatever dominant species inhabited the host planet.

One such bio-ship crashed on Earth some 40,000 years ago at the North Pole, but it froze over and was unable to execute its mission. Over time, the bio-ship healed and lured a human hunter on board. Experimenting on the human, the ship was able to synthesize the genetics needed for its eggs and released them.

However, due to an ice age, almost all the eggs perished. One surviving egg hatched and became Marrina. Another Plodex egg developed into a sea monster.

Wild Child

Kyle Gibney was born a mutant. In his teens, he became feral and bestial when his mutant powers manifested. Possessing enhanced physical abilities and regeneration, he was sought after by various agencies to train as an agent.

At times, Gibney worked with Alpha Flight as a hero, but eventually his more savage nature turned him against the team.

PLAYING ALPHA FLIGHT

Alpha Flight, despite their many incarnations and lineup changes, has always stood as Canada's premier super-powered team. Often beleaguered by enemies without, and beset by internal struggles, their strong ties allow them to come together and overcome all challenges like a true family.

Theme

One of the pillars of Alpha Flight is how the team embraces minority representation. From their earliest days they included a First Nations member in Shaman (and then later Talisman); the child of an Inuit goddess (Snowbird); a woman struggling with mental health issues (the bipolar Aurora); and Northstar, a gay man.

Another core theme of Alpha Flight is that they are either beholden to the government or in conflict with it. For example, Department H often sends the team to deal with domestic protests, including climate crisis activists protesting exploitation of natural resources, First Nations communities taking a stand against land encroachment or freedom rebels occupying key municipal areas and blocking trade routes. Conversely, when the government authorities abuse their power, it is up to Alpha Flight to keep them in check.

In more recent years, Alpha Flight has dealt with themes of environmentalism and authoritarianism, intolerance and persecution. Though the heroes may have "family tension" and personal baggage to spare, ultimately they have one another's backs and come together to do their best to fight for Canadian ideals. These include (but are not limited to) respect for human rights and freedoms; civility and mutual respect; coexistence of different cultures in one society and community; and allowing individuals to preserve their ethnic, cultural and religious origins.

Style

Alpha Flight is often a hot mess. Everyone has a lot of issues of their own to deal with, and that can translate into pushing buttons and butting heads with their teammates. Much like the Fantastic Four, Alpha Flight is often a team of family: Aurora and Northstar as brother and sister; Shaman and Talisman as father and daughter; and, of course, James Hudson and Heather Hudson as husband and wife, the leaders and collective heart of the team.

Michael Syrett (Order - 5319-1700)

For the most part, Alpha Flight is unapologetically Canadian. Sometimes they may even go too far (was Puck named for the Shakespearean jester, or for a hockey puck? Was Major Mapleleaf ever considered a sensible name?), but they are always in earnest.

Purpose

In addition to traditional heroic ideals, Alpha Flight's purpose is to fight for and uphold Canadian values. These include:

- Public safety.
- Good governance.
- Defense of the country's vast territories and borders, from coast to coast to coast.
- Holding the line against super-powered and supernatural threats in the North, from the Great Beasts to alien horrors.

During the Alpha Flight Space Program era, they had a considerably broader remit:

- Monitor alien activity.
- Defend Earth from extraterrestrial incursions.
- Respond to global threats.
- Cooperate with alien societies that have shared security interests.

Transportation

As a sub-department of the Canadian Ministry of Defense, Alpha Flight has access to many military vehicles such as jeeps, airplanes, helicopters and boats. In their early days, they often deployed from a Chinook helicopter for local operations. They also had access to advanced vehicles built for them by Department H.

Alpha Flight Omnijet

Built on the same design as the Avengers Quinjet, the Mark I served the team until it was destroyed. More models of similar design followed until the Mark IV, which was created for the special use of Department H and called the Alpha Jet.

The jets are capable of vertical takeoff and landing (VTOL) and can reach speeds over Mach 2. They have some stealth capabilities to avoid radar and run quietly, and they have enough cargo space to carry the whole team and their equipment.

Alpha Flight Squadron Jets

A hangar bay on the Alpha Flight Low-Orbit Space Station housed a full squadron of space-worthy jets. Each jet can carry one pilot and is capable of entering Earth's atmosphere.

JOINING ALPHA FLIGHT

Joining Alpha Flight is usually, though not always, a more bureaucratic procedure than with most super-hero teams. Department H is the governmental agency in charge of determining the team's needs and requirements and deciding if a candidate is suitable to recruit.

Of course, during any period in which Alpha Flight is not operating under Department H's mandate, the leadership of the team is free to recruit any members they feel are needed.

Requirements

Alpha Flight does not require any particular background or origin for its members. It has welcomed mutant and non-mutant members alike. While it traditionally is made up of Canadian citizens, this is not always a strict requirement, especially in the Captain Marvel era.

Members of Alpha Flight should be Rank 4, although sometimes the team promotes a promising Rank 3 member (such as from Beta Flight) if they need someone's specific powers, or if the team's bench is light.

Beta Flight members are Rank 2 or 3 on average, while Gamma Flight members might be only Rank 1 or 2, although exceptions do exist.

Getting In

Once a hero is recruited for Alpha Flight, Department H runs background checks, psychological profiles and a gamut of tests to determine the candidate's suitability. Depending on what the department is looking for, the results may not be a barrier to membership. The historical records of Department H are littered with examples of questionable decisions and actions that could be described as exploitative or damaging. Those records are classified, of course.

What can make for interesting stories is determining whether a character—or the entire group—is best suited for Gamma, Beta or Alpha Flight. In a Gamma Flight game, all the characters are lower-rank and green recruits. In a Beta Flight game, the characters are more experienced—and possibly more mature—but still relatively untested on the field of battle. Finally, Alpha Flight recruits are among the best of the best, able to go toe-to-toe with the kinds of threats the X-Men, Avengers or Fantastic Four might face.

Character Alterations

Players can add Alpha Flight (or Beta or Gamma) under Teams on their character sheets. Most members of Alpha Flight should take the Famous trait, at least while operating in Canada. Those who have never been big south of the border don't get as much attention on the American or worldwide stage.

Characters with secret identities almost certainly need to reveal that information to their government handlers in Department H. They must hope that this information is held in trust and never used against them—although it can make for great leverage in conspiracy-themed games.

Powers and Roles

As with other super-hero teams, it's important to think about what role each character should play. Because, one of the recurring themes in Alpha Flight is a sense of family, Narrators should encourage players to discuss their characters with the rest of the group to see what relationships they can build into their backgrounds, whether as family members, romantic partners, close friends or something else.

Training Up

If a character isn't experienced enough to join Alpha Flight, they should start as a member of Gamma or Beta Flight. Junior characters may be called upon for a particular mission—if their skills or powers are required, and it's deemed not too dangerous—until they've gained enough in rank to be promoted.

Duties

Like other members of Canada's national security system, it is Alpha Flight's role to investigate potential dangers to the country—all in accordance with ministerial direction (from Department H).

Public Perception

Being a member of Alpha Flight is seen as a mark of prestige and responsibility. One is expected to behave in a manner that not only meets but exceeds the rightfully high standards of all Canadians. Members are subject to this code of conduct both on and off duty, within the borders of the country and abroad.

ALPHA FLIGHT ADVENTURE HOOKS

From the wild North to the even colder depths of space, here are some hooks to get an Alpha Flight game rolling.

Classic Canadian Era

- A wildfire is burning out of control in British Columbia and threatens several towns close by. The team is dispatched to deal with the situation. Should they try to put out the fire? Evacuate the towns? Who started it, and are they done?
- A turf war is brewing as foreign trawlers poach lobster in Canadian Atlantic waters. The locals are arming themselves, intent on driving the foreign boats out. What's bringing this to a head now? Could Atlanteans be forcing the foreign crews to look beyond their borders?

Michael Syrett (Order - 5319-1700)

- A Department H weapons facility is under attack from one of their experiments that has gone out of control. The team needs to contain the situation before the subject can escape and cause more damage. Who authorized this experiment, and why did it go wrong?
- In a remote Arctic base, a researcher has been found murdered. Since there are no local authorities, the team needs to solve this and protect the remaining people in the outpost. Was it an inside job, or is something more sinister at work?
- Fracking operations in the Alberta oil sands accidentally release an ancient evil spirit that possesses workers and begins destroying the facility. Which side do the heroes take?
- An entire First Nations Inuit community on the shores of Angikuni Lake, Nunavut, vanishes. The whole village of 50 people disappears overnight, leaving homes, cars, meals on tables and so forth. A similar event was reported over a hundred years ago, and never explained. This time, however, the individuals are reappearing one by one, in far-flung places like Vancouver, BC, and Calgary, Alberta, infused with strange powers and causing havoc. Alpha Flight investigates, and finds the events tied to the Great Beasts, who somehow kidnapped a whole village, took them to their dimension and are now deploying them as part of a scheme to weaken the barriers between worlds. Why are they doing this now, and why did they pick the residents of this village?
- A Canadian Armed Forces peacekeeping mission gets into hot water due to outdated and poorly maintained equipment (or a lack of critical gear, such as anti-drone systems or basic ammunition). Alpha Flight is sent it to rescue them in a hostile theater far from home. Is this an effort to draw super heroes into a military conflict? If so, who's behind it?
- The team receives an emergency call. The Wrecking Crew is destroying downtown Toronto. The Crew went nuts when they lost a bet on a hockey game (the Toronto Maple Leafs shut out the visiting New York Rangers 5–0) and it's up to Alpha Flight to contain the riot.

Space Station Team

- An alien artifact is discovered far up north, near the ruins of an Arctic research station. It could relate to the Kree or Skrull empires, or even be a Plodex bio-ship bonded with the environment.
- The space station is hosting ambassadors from two warring space empires—Alpha Flight must keep the peace as well as broker further treaty talks.
- A weapon of incredible power is discovered on the far side of the moon. Alpha Flight must get there and secure it before it can fall into the wrong hands.
- A strange satellite has come alive at the L2 Lagrange point (stationary orbit just behind the Earth-moon system). Who owns it? What is its purpose? Is it the prelude to an invasion of some kind? Who is collecting intelligence with it?
- A faster-than-light experiment gone wrong has created a portal in orbit. Swarms of aliens are coming through and the team needs to go through the portal to retrieve the experimental FTL ship and shut it down to close the opening.

EXILES

Earth-616 might seem like it has a lot of problems, but the Earths of the Multiverse collectively contain an infinite number of issues. Many of these alternate worlds have already been destroyed. Others exist in such a volatile state that a single wrong move could plunge them into eternal darkness.

This is where the Exiles come in. Unable or unwilling to return to their home realities, the Exiles choose to enact justice throughout the Multiverse, saving as many alternate worlds as they can.

TEAM HISTORY

A pocket dimension deep within the M'kraan Crystal acts as a nexus from which the entirety of the Multiverse can be accessed. Most of the space in this dimension is taken up by a single sprawling Crystal Palace—the Panoptichron—that overlooks all of time and space.

At some point, a species of insectoid aliens found their way into the Panoptichron and accidentally damaged the multiversal nexus, throwing all of existence into jeopardy. Desperate to set things right, the aliens—calling themselves the Timebreakers—used what few of the Panoptichron systems they could understand to kidnap a handful of random heroes and villains from across the Multiverse. Using the projected image of a stout bookie they called the Timebroker, the aliens convinced these people that they were universal exiles who could return home only after certain timelines had been fixed.

The Timebreakers divided their kidnapped victims into two teams. The villain team was called Weapon X. The hero team was called the Exiles.

The Original Exiles

The first group of Exiles consisted of six mutants, each from a distinct universe.

First Recruits

- Blink (Clarice Ferguson) of Earth-295
- Magnus Lehnsherr of Earth-27
- Mimic (Calvin Rankin) of Earth-12
- Morph (Kevin Sidney) of Earth-1081
- Nocturne (Talia Josephine "TJ" Wagner) of Earth-2182
- Thunderbird (John Proudstar) of Earth-1100

Having grown up in the war-ridden Age of Apocalypse, Blink was by far the most experienced member of the group, and the others quickly nominated her as their leader. Coincidentally, Blink's longtime mentor and father figure, Sabretooth (Victor Creed), was appointed as the leader of the Weapon X team.

For their first mission, the Exiles were sent to a universe in which Magneto was a force for peace and coexistence between mutants and humans, while Professor X was a madman determined to end the human race. The Exiles managed to defeat this evil Xavier, but only by sacrificing Magnus Lehnsherr, marking the beginning of a troubling trend that followed the team throughout their existence.

The Exiles almost always have the odds stacked against them. Their victories are Pyrrhic, and rarely do they get through more than a few missions without losing one of their own.

ichael Syrett (Order #53194700)

The Timebreakers replaced Lehnsherr with Sunfire (Mariko Yoshida) of Earth-2109, who was herself killed and replaced several missions down the line. During one early mission, an encounter with an alternate version of Galactus put Thunderbird into a coma. The Timebreakers took Thunderbird back to the Panoptichron to recover, replacing him with Sasquatch (Heather Hudson) of Earth-3470.

Not long after Sasquatch joined the team, both Weapon X and the Exiles were sent to Earth-2600, a postapocalyptic reality where mutants were kept in concentration camps. The Exiles were ordered to liberate one such camp, while the Weapon X team was told to kill a young boy in the same camp—a boy who was supposedly destined to grow up to become a mass murderer.

Neither the Exiles nor Sabretooth were willing to kill an innocent boy, and they fought the rest of Weapon X, driving both teams to the brink of destruction. Ultimately, the Timebroker settled the conflict by agreeing to let the boy live, as long as Sabretooth stayed on Earth-2600 to raise him. Shortly thereafter, Blink joined Sabretooth on Earth-2600, leaving both the Exiles and Weapon X leaderless.

Mimic took over as the leader of the Exiles, while a new recruit—Hyperion of Earth-4023—took over Weapon X. Hyperion was a power-hungry tyrant who attempted to install himself as the supreme leader of every alternate Earth the Timebreakers sent him to.

Blink returned to help the Exiles defeat Hyperion. The Timebreakers took his dismembered body back to the Panoptichron and put it into stasis, where it slowly re-formed. Within moments of regaining consciousness, Hyperion secretly took control of the Timebroker and forced the Exiles to embark on a series of increasingly deadly and cryptic missions.

The Exiles quickly became suspicious of the Timebroker's strange behavior, and with the help of Sabretooth, they managed to track Hyperion back to the Panoptichron. The Exiles eventually defeated the villain by trapping him in his home dimension, but not before he destroyed much of the Panoptichron.

The Exiles were upset to discover the true nature of the Timebroker, but they had to do something to save the Multiverse. A few members of the team retired, but the rest decided to make peace with the Timebreakers and resume their travels across the Multiverse.

The Exiles on Tour

Having lost her powers, Heather Hudson agreed to stay behind in the Panoptichron and act as mission control. That left the Exiles with a paltry four field members: Blink, Sabretooth, Mimic and Morph.

To make matters worse, on one of the team's first missions back in the field, Mimic was murdered by an alternate-universe version of Proteus. Outraged by the slaughter of one of their oldest friends, the Exiles set out on a quest to defeat Proteus and avenge their teammate.

The pursuit of Proteus drove the Exiles on a multiversal chase through the New Universe (Earth-148611), the Marvel 2099 Universe (Earth-928) and the Squadron Supreme Universe (Earth-712). Along the way, they picked up three new members:

- Longshot of the Mojoverse
- Power Princess (Zarda Shelton) of Earth-712
- Spider-Man 2099 (Miguel O'Hara) of Earth-6375

As the Exiles came closer to capturing their foe, Proteus possessed Morph. The Exiles turned this to their advantage by using a brainwashing helmet to trap Proteus' consciousness inside of Morph's. Eventually, Morph made peace with Proteus' subdued consciousness and integrated it into his own.

Afterward, the team attempted to keep going, but they were too shaken and exhausted. Power Princess returned to her home dimension, as did Heather Hudson. Longtime Exiles like Nocturne and Thunderbird briefly returned to help the team through this time of crisis, but what the group really needed was a fresh start.

A New Era

A chance encounter with a dissolving incarnation of Excalibur on Earth-616 convinced the team to recruit a number of former Excalibur members, along with some of their alternate-universe counterparts. With these new members on the team, Blink felt comfortable taking a well-earned vacation, leaving Morph as the sole member of the original Exiles on the new team.

The New Exiles

- Morph (Kevin Sidney) of Earth-1081
- Mystiq (Raphael-Raven Darkhölme) of Earth-797
- Psylocke (Elizabeth Braddock) of Earth-616
- Rogue (Anna Raven) of Earth-1009
- Sabretooth (Victor Creed) of Earth-295
- Sage of Earth-616
- Shadowcat (Cat Pryde) of Earth-79596

Not content with simply pulling worlds back from the brink, Sabretooth's Exiles worked to stabilize the universes they saved, at times spending months to protect against predictable crises. With the destruction of the dimensional nexus no longer an impending concern, the team also started to study the Panoptichron's mysterious systems, turning it into a proper home base.

Ironically, shifts within the incomprehensible consciousness of the Crystal Palace caused the Panoptichron to start treating the Exiles as foreign invaders, absorbing them into its walls. Blink and Nocturne had to return to bail their old allies out, and most of the new Exiles chose to immediately retire.

Blink, Nocturne, Sabretooth and Morph tried to use what few of the Panoptichron's systems they could safely access to recruit a new team of junior Exiles, but these efforts were largely unsuccessful. Eventually, Blink returned to her retirement on Earth-616, leaving Morph, Sabretooth and Nocturne to oversee the Panoptichron.

While investigating a rift in time and space, Morph, Nocturne and Sabretooth were separated. Sabretooth managed to find his way back to the Age of Apocalypse, but Nocturne and Morph remained lost for some time.

The Impromptu Exiles

Years later, the Unseen (Nick Fury) summoned Blink to the Blue Area of the Moon and informed her that the Time-Eater—a version of Kang the Conqueror—had absorbed the power of Galactus and begun devouring entire timelines. Before Blink could protest, the Unseen sent her flying through the

Michael Syrett (Order - 5319-1700)

Multiverse to save it. The Time-Eater hot on her tail, Blink had to put together a motley crew of Exiles while jumping madly from world to world.

The Next Exiles

- Blink (Clarice Ferguson) of Earth-295
- Captain America (Peggy Carter) and Becky Barnes of Earth-86315
- Iron Lad (Nathaniel Richards) of Earth-18651
- Khan (Kamala Khan) of Earth-81111
- Valkyrie of Earth-22681
- Wolvie of Earth-32518

While Iron Lad and Valkyrie came from universes that largely resembled Earth-616, the rest did not. Captain America and Becky Barnes hailed from a universe where WWII still raged. Khan came from a dystopian future where humanity, mutants and Inhumans lived in a constant state of war. Most bizarre of all, Wolvie came from a universe that resembled a nonviolent cartoon for young children.

Blink and her new crew tracked the Time-Eater to his base and destroyed him by crawling inside his massive frame and detonating a nuclear device. Khan had to sacrifice herself to set off the bomb, but the rest of the team made it back to Earth-616.

The Exiles thought their ordeal was over, but soon enough the Multiverse called them back. Responding to Blink's desire to uncover the fate of her old teammates, the M'kraan Crystal drew the Exiles into a universe in the style of the American Old West.

Blink found Morph and Nocturne on this world, but her old teammates had fallen under the control of an evil version of Professor X. With the help of an Old-West version of Black Panther—codenamed King—the Exiles defeated Professor X, but not before he killed Morph. Shaken, Nocturne chose again to retire, allowing King to join the Exiles in her place.

Before the Exiles could think about their next move, they were kidnapped and put on trial by a rogue squadron of Watchers who were upset by the team's multiversal tampering. These Watchers trapped the Exiles in personalized dimensional prisons, forcing them to live out nightmarish versions of their own lives. Ultimately, Iron Lad sacrificed himself to free his teammates and summon the Watchers, who took their rogue counterparts away.

Blink and the surviving Exiles returned to Earth-616 to await the Multiverse's next call.

LOCATIONS

More often than not, the Exiles are on the move, traveling from universe to universe, rarely retracing their steps. However, there are a few locations they've returned to over the years.

Panoptichron

Residing in the Panoptichron for an extended period can be dangerous, but the benefits often outweigh the perils. The Crystal Palace is unfathomably massive, containing rooms for every conceivable purpose.

The Exiles have only begun to explore the Panoptichron's depths, and they've already found a training room, a transporter room, an infirmary, a barracks, a mission-control room, a room with a seaside beach and a room containing nothing but an endless desert. Any Exiles who die or end up critically injured on the job are automatically teleported to the inside of a translucent stasis wall near the Panoptichron's center.

The Bahamas

Currently, the Exiles reside in the Bahamas of Earth-616. Blink moved the team there to be closer to the Earth-616 versions of her parents. Her real parents died when she was young.

While this new base lacks the resources of the Panoptichron, it is far safer. The Exiles spend most of their time in the Bahamas training, hanging out, relaxing on the beach and helping the local people with daily tasks.

Although the Exiles have sometimes had the Panoptichron to fall back on, most of their headquarters have been spur of the moment. When they enter a new universe, they generally seek out a local super-team and ask to use their headquarters. For instance, on Earth-901237 the team made use of extra beds in Alpha Flight's Canadian headquarters while working out a way to track down an alternate version of the Hulk (Bruce Banner).

If there are no other super-teams around, the Exiles hole up in a secure area, typically a cave or bunker. More often than not, these temporary bases lack all but the most basic necessities. New members of the Exiles must quickly become accustomed to the prospect of sleeping on the ground.

If the Exiles do have access to the Panoptichron, their lives become infinitely easier. They have access to medicine, food and training equipment, and as long as the tower's computers are functioning, they can use the Excursion Platform to travel anyplace in the Multiverse, allowing them to revisit their homeworlds at will. The Panoptichron's computers automatically scan the universe for signs of temporal anomalies, so between missions, the Exiles can focus exclusively on training and relaxing.

Of course, the Panoptichron is still an unknowable, eldritch entity. It can shift into a more hostile form at any time, and the Exiles can never be too comfortable hanging around inside it.

OPPONENTS

The Exiles typically operate on an episodic basis. They encounter an enemy once, defeat them and then never see them again. However, they do have a small handful of recurring foes.

Weapon X

Although it shares the same name as the Weapon Plus program of Earth-616, the Weapon X team is not an experimental weapons project. The Timebreakers simply created Weapon X to do the jobs that the more heroic Exiles would refuse.

Although the Weapon X team was dissolved, the idea of a rival team has continued to haunt the Exiles. The cosmic gamesman known as the Grandmaster created a short-lived rival team to fight them, and the rogue group of Watchers did something similar too.

Hyperion of Earth-4023

Possibly the most powerful foe the Exiles ever faced, Hyperion is a power-mad tyrant without peer. As a young man, he attempted to take over his universe's Earth. To stop him, the people of the planet had to nuke themselves.

Hyperion has no ideals, morals or beliefs beyond the feeling that he is better than others and thus deserves to be their ruler. Although he has plenty of enemies, he hates no one more than the only people to have thwarted him: the Exiles.

Although he appears to have been killed by the Thunderbolts of Earth-616, Hyperion has come back from the dead before. Given time, he could return to menace the Exiles again.

Proteus of Earth-58163

Despite hailing from a borderline utopian reality, the Proteus of Earth-58163 strongly resembles the Proteus of Earth-616 during his early days. He is a mentally unstable, body-snatching, reality-warping serial killer.

Proteus exists as a being of pure chaotic energy. He cannot survive without a host, but he quickly burns through the bodies of those he possesses. He had hoped that Morph's malleable form would prove capable of serving as a permanent vessel, but it turned out to be more of a prison instead.

Shortly before his death, Morph claimed to have expelled Proteus from his body. The villain's current location remains unknown.

PLAYING THE EXILES

Playing the Exiles requires pinning down the team's mission. Early Exiles adventures were dark and dramatic—delving deep into themes of identity and mortality—while the team's more recent incarnations have been relatively light in tone, focusing more on fantastical possibilities offered by an infinite Multiverse.

One Exiles adventure might see the team traveling through a whimsical super-powered version of *One Thousand and One Nights*. Another might have them trudging across a zombie-infested postapocalyptic hellscape. However, a few key elements tie every Exiles series together.

Theme

The Exiles can't go home. Their home realities are either inaccessible or unsafe. The Exiles hope that by helping to fix the Multiverse, they might find a way home, but they rarely know when—or even if—their salvation could come.

Ultimately, an Exiles story is one of self-sacrifice. They regularly risk life and limb to save worlds they didn't even know existed a day before. Many Exiles have given their lives to save worlds that will never know their names.

An infinite Multiverse has an infinite number of problems. Yet the team carries on, content in the knowledge that doing good is its own reward.

Michael Syrett (Order - 53194700)

Style

As opposed to a lot of other super-teams, the Exiles generally get along. They may come from wildly different worlds, but the desperate and often larger-than-life nature of their missions pushes them toward relying on one another. As a necessity of survival, the Exiles have to learn how their different powers, personalities and backstories complement one another. Though they occasionally get into spats, they are all good friends. Romances between team members are far from uncommon.

Unfortunately, the tight-knit nature of the team only makes the death of a member hit that much harder. Deaths among the Exiles happen regularly, and when they do, they leave the entire team disheartened. Since they're always on the move, the team rarely has the time to sit down and properly grieve.

Purpose

The Exiles have only ever had three goals.

- Protect the Multiverse.
- Save as many people as possible.
- Get home.

Generally, these goals align well. On the few occasions they haven't, the team has been forced to make tough choices.

If the only way to save a universe is by killing someone, does the team complete the job, or do they stick to their morals and try to find another way? Does the team take an opportunity to finally go home, knowing that there are still universes out there to save? These are the sorts of dilemmas that pushed many incarnations of the Exiles to their breaking point.

THE TALLUS

Transportation

Since the beginning, the leader of the Exiles has worn a Tallus: a specialized armband containing a piece of the M'kraan Crystal. This device allows anyone in the Panoptichron, or any sufficiently powerful being, to communicate with the Exiles in the field and transport them throughout the Multiverse.

When it works, the Tallus can take the Exiles literally anywhere in the blink of an eye. Unfortunately, it's fragile and prone to failure.

In any case, the Tallus is too unreliable to be used for transportation within a given universe. As a long-range teleporter, Blink usually manages the team's transportation issues with her powers, getting them where they need to be in an instant.

JOINING THE EXILES

The Exiles are not picky. If a character has been in the group at any point in the past, the team still considers them an honorary member.

Requirements

Most Exiles are mutants, but many non-mutants have joined the team too. Most members are also of Rank 3 or higher, but a few—like Beak (Barnell Bohusk)—have been as low as Rank 1.

Conceivably, anyone could become a member of the Exiles. They just have to get in.

Getting In

Rarely does a person deliberately join the Exiles. More often than not, they are swept up into the team by a combination of circumstance and bad luck. They might be kidnapped by a godlike entity and forced into service, or maybe they flee into the hands of the team to escape some danger back home.

Sometimes after an adventure, one of the people the Exiles helped volunteers to repay their kindness by joining the team. To date, no such offer has been rejected.

Character Alterations

When a player joins an Exiles team, they should add the team's name to the Teams section of their character sheet.

They should also take Outsider as an Extra Occupation (if they don't have it already). The Exiles are generally not familiar with the history and culture of the worlds they visit. If necessary, the Narrator should allow the character to trade out another trait to make room for this one.

The leader of the team should also take the Tallus, gaining access to all the powers of that device.

Powers and Roles

Just as with any team, the Narrator should try to give their version of the Exiles a cast of diverse and interesting characters with complementary powers. The Narrator should also think about whether a given character fits in with the Exiles concept. Although different team structures are possible, most Exiles teams have consisted of a charismatic and experienced leader (e.g., Blink or Sabretooth), a much larger bruiser character (e.g., Thunderbird or Valkyrie), a couple of less experienced all-arounders (e.g., Mimic or Iron Lad) and some sort of comedic relief character (e.g., Morph or Wolvie). The Exiles typically have five or six members, though

Art by Jim Calafiore, Mark McKenna & Transparency Digital

Michael Syrett (Order #53194700)

back when they had access to the Panoptichron, they kept an additional member on the team to act as mission control.

While the Exiles concept can accommodate almost any sort of super hero, a player character capable of freely hopping between dimensions might be a bad fit. Such a character would make it difficult for the Narrator to keep the Exiles trapped in a given dimension, and being trapped in a place far from home is a staple of most Exiles stories.

Training Up

Since the Exiles rarely settle down in one location for very long, most of the team's training happens on the job. Members often supplement their powers not through concentrated practice but by obtaining new equipment. A character might start out as a hero with barely any abilities, but rank up after finding a powerful suit of cyber armor.

Some Exiles may rank up simply by being exposed to perspectives and possibilities that had never occurred to them before. A member of the team may see an alien with similar powers to their own use those abilities in a unique way and rank up by incorporating the foreign techniques into their own move set. Another might rank up by reading a book or witnessing an anomaly that changes the very nature of their being. The Multiverse contains an infinity of dangers, but it also contains an infinity of potential boons.

Duties

The Exiles' primary goal is to save the world they currently inhabit. However, what they need to do to save the world can vary wildly.

Sometimes, they must fight off a horde of foes. Other times, they need to help create the cure for a deadly virus. Occasionally, they just have to buy a specific pastry from a particular coffee shop. Through the Tallus, the Panoptichron can offer the Exiles hints on how to fix any given world.

Their secondary goal is, traditionally, to get home. Some incarnations of the Exiles have been free to return home at any time, but most versions of the team have been forced to go dimension-hopping. These Exiles hope that by fixing the Multiverse they may eventually be allowed to return home, but after enough death-defying encounters some members may start to lose faith. They may even consider betraying their teammates in exchange for an easy path back home.

Public Perception

The Exiles have virtually no public reputation. They rarely stick around in a universe for more than a few months, not nearly long enough to build up any sort of renown. Only a handful of authority figures on Earth-616 are even aware that the team exists.

EXILES ADVENTURE HOOKS

Sometimes, a Narrator needs a little inspiration to help find focus in the Multiverse. Players might want to skip this section entirely, but since these are only premises, the curious can take a look.

Here are ten adventure hooks for the Exiles.

- The Exiles warp onto a barren world populated entirely by alternate-universe versions of themselves. Moments before the Tallus goes dark, it whispers a single sentence to the leader of every team: "Only one can remain."
- Deep within the Panoptichron, a member of the team inadvertently discovers a door to Otherplace, the demonic limbo. A horde of demons, led by Belasco himself, floods through the open portal and infests the base, putting the entire Multiverse at risk of a demonic invasion.
- The Exiles warp into a universe where the planet Earth has already been destroyed. In this timeline, the Dark Phoenix never died and Jean Grey rules the galaxy with an iron fist. In order to take her down, the Exiles must join forces with a Skrull resistance movement.
- The mystical image of a knight in shining armor draws the team to an Earth resembling the setting of the epic poem *Beowulf*, with one important exception. Beowulf himself was never born, and thousands of monstrous creatures called Grendels stalk the roads of Denmark.
- The Exiles jump to a dystopian Earth where ecological disasters have flooded 95% of the planet's surface, forcing humanity's few survivors to take shelter in the highlands of Latveria. The team must ensure that peace negotiations between Latveria and Atlantis go smoothly.
- The Tallus drops the Exiles in one team member's home universe. One of the character's parents is at the root of this universe's problem. Will the team member be willing to do what's necessary to save this universe? Will they continue their adventures with the Exiles, or will they return home for good?
- A powerful villain has begun tracking the Exiles across universes, endangering their missions. Is this villain teaming up with other versions of themselves? What does this villain have against the Exiles?
- A psychic virus begins turning members of the Captain Britain Corps against one another, pushing the Otherworld to its breaking point. Summoned by Omniversal Majestrix Opal Luna Saturnyne, the Exiles must get to the root of the problem while keeping the infected contained, lest the virus break free and threaten the entire Multiverse.
- The Tallus warps the Exiles into a universe where the Hulk (Bruce Banner) won his war against the Illuminati. Now calling himself the Conductor, Banner has turned most of North America into a sanctuary for alien refugees. The Exiles are tasked with preventing Banner's assassination at the hands of an overzealous Reed Richards.
- The Exiles arrive on Earth-8311, home planet of Spider-Ham (Peter Porker). The Tallus gives the team a single task: For the next 24 hours, Spider-Ham must not eat any pie.

OTHER WORLDS

While the X-Men spend most of their time on Earth-616, their adventures have taken them to many alternate worlds, universes in which things can differ significantly from what they're used to. This chapter presents some of the most important ones that have had the deepest impact on them.

These universes exclude possible futures, many of which have had people reach back to the X-Men of the current day. Chapter 11 explores those kinds of universes.

AGE OF APOCALYPSE: EARTH-295

A Moment in Time

Legion—the mentally ill son of Professor X—only meant to help. He believed that his father's longtime foe Magneto was the source of much of humanity's fear of mutants, so he went back in time to kill Magneto before he could launch any terrorist attacks. Unfortunately, Professor X and Magneto were good friends at the time, and Professor X sacrificed himself to save Magneto's life.

Normally, this wouldn't have affected the time-travelers there, as they had created a new timeline by appearing in the past, but the M'kraan Crystal attempted to rectify the seeming paradox by eliminating Legion and the X-Men he'd brought back in time with him. Moved by Professor X's sacrifice, Magneto took up his cause to bring humans and mutants together in harmony. At the same time, Professor X's death inspired Apocalypse to begin his campaign against humanity much earlier than he did on Earth-616.

With a massive head start over Magneto's efforts to build the X-Men, Apocalypse conquered North America with his top mutants, whom he called his Horsemen. This bifurcated the world between his domain and the Human High Council based in Europe. To help rule, Apocalypse had his Horsemen battle one another until four remained—Abyss, Nemesis (later known as Holocaust), Mikhail Rasputin and Mister Sinister—and he then split his territory up among them.

The M'kraan Crystal's changes did not affect Bishop, who had come from an alternate future that Earth-295 could not lead to. Since he still remembered how things had happened in the original universe, he was sent back in time to stop Legion from attempting to kill Magneto, setting everything back to the way it had been for Earth-616.

A number of characters who hailed from Earth-295 managed to escape to Earth-616 in the moments before the timeline reverted. They included Dark Beast (an evil version of Hank McCoy), Holocaust, Sugar Man and X-Man. In addition, Blink and Sabretooth of Earth-295 were lost in time and later chosen by the Timebreakers to help fix the Multiverse. (See Chapter 9: Exiles for more about them.)

Post-Apocalypse

Meanwhile, Earth-295 persisted as a separate universe in which Magneto and his X-Men helped to rebuild civilization in the wake of Apocalypse's defeat. It turned out that Mister Sinister had been blackmailing Magneto into secretly working for him, as the X-Men discovered when they found and freed Jean Grey from Sinister's control.

Years later, the X-Men of Earth-616 returned there to discover Weapon X (Earth-295's Logan) leading a new genetic culling of the planet, provoked by the Celestials. They had used a Death Seed to transform him into a new

Apocalypse who called himself Weapon Omega. The arrival of the visiting X-Men brought about a climactic battle that pit Weapon Omega against his wife, Jean Grey of Earth-295. In the aftermath, the Earth-295 versions of Nightcrawler, Iceman and the Blob escaped to Earth-616.

Sometime after that, Nightcrawler-295 and Dark Beast returned home by way of teleporting through a Celestial. This went tragically wrong and broke down the barriers around Earth-295, freeing the Exterminators. (The Celestials had created the Exterminators as a force of darkness to balance the light in the original universe, but they lost control of them and had to imprison them in a separate universe.) To save the rest of the Multiverse, Nightcrawler-295 sacrificed himself to seal the Exterminators on Earth-295, which they presumably destroyed.

Adventure Hooks

Here are some adventure hooks for Earth-295.

- The heroes' twisted counterparts from Earth-295 cross over into their world. From there, they set out to find a time machine and go back to murder Professor X in a bid to destroy the heroes' timeline again. However, some of them would rather stay in this universe and try to conquer it instead.
- Manifold-295 arrives to announce that the seal around Earth-295 is starting to crack. He needs help to rework the seal or—better yet—put an end to the Exterminators once and for all. But is he telling the truth?
- As the new Apocalypse of Earth-295, Jean Grey escapes from her universe. She now wants to find the Phoenix Force in this world, bond with it and take the fight back to the Exterminators—but will the Phoenix Force go with her? Even if it wants to, can it?
- A cult of Apocalypse's former followers is searching for a means of restoring their long-dead leader to life. They have plans to find and use a Life Seed to make this happen. Or are they just using that as an excuse to place themselves in power instead?
- Mikhail Rasputin plans to steal the Phoenix Force from Jean Grey by triggering her transformation into the Dark Phoenix. She might destroy the entire planet, but if not, he stands ready to swipe the power.

MUTANT X: EARTH-1298

Swapped at Death

At a time when Havok was in charge of X-Factor, a number of mutants from a possible future (Earth-1191) joined the team. One of them—Greystone—built a time machine to try to return to his universe, but it exploded, apparently killing both himself and Havok. Instead of dying, though, Havok-616's mind traveled to Earth-1298, where he took over Havok-1298's body.

On Earth-1298, Havok was the leader of a group of mutants known as the Six. In this world, Cyclops had been kidnapped along with their parents, and Havok had grown up alone to become the leader of the X-Men. He later founded X-Factor, which evolved into the Six.

The Six

- Bloodstorm (Ororo Munroe)
- Brute (Hank McCoy)
- The Fallen (Warren Worthington III)
- Havok (Alex Summers)
- Ice-Man (Bob Drake)
- Marvel Woman (Madelyne Pryor)

In this world, Havok married Madelyne Pryor and had a son they named Scott, after Havok's long-lost brother. Pryor became Marvel Woman after cutting a deal with Belasco to save Scott's life, triggering telekinetic powers similar to those of Jean Grey, from whom she had been cloned.

Storm is a vampire named Bloodstorm, who feeds off Forge when necessary. Beast meddled with his powers too much and became Brute, a dumber version able to breathe underwater. When Angel became Archangel, he was able to breathe fire as well, and he never changed back, calling himself the Fallen. Iceman never managed to get his powers under control after Loki messed with them, and he's been stuck in his frozen form ever since, as Ice-Man, who instantly freezes anyone he touches.

Havok eventually gave up trying to convince others that he wasn't the Havok from their Earth, and he led the Six on a series of adventures in this familiar but twisted world. In their first mission, they stopped Nick Fury—who had transformed S.H.I.E.L.D. into an anti-supers terrorist organization—from unleashing a version of the Legacy virus that would harm all super-powered people.

When Marvel Woman transformed into the Goblin Queen, Scott used his telepathic powers to banish the evil influence from his mother. It sank to the center of the Earth where it combined with the Beyonder to become more potent than ever. Once the repowered Beyonder broke free, he went after Havok, who turned out to have absorbed the Nexus of Realities, which the Goblin Queen wanted so she could access and conquer other universes.

With the help of Professor X, Mister Fantastic and Doctor Strange, Havok separated the Goblin Queen from Pryor and absorbed the Goblin Queen into the Nexus of Realities. Doing so sent Havok back to Earth-616, but it saved Earth-1298 and sent Pryor back to be with her son Scott again.

Aftermath

It turned out that Havok-1298 hadn't swapped bodies with Havok-616. Instead, his mind had been submerged in his body while Havok-616 controlled it. When Havok returned to Earth-616, the submerged consciousness came along with him, still buried. It finally emerged when Havok was badly hurt again, allowing Havok-1298 to regain control of his own body.

The Timebroker sent the Exiles to intervene. When Havok-1298 awakened, he was evil and aggressive and he attacked the X-Men and the young mutants in their care. Nocturne (the daughter of Nightcrawler and the Scarlet Witch from Earth-2182) used her possession powers to shove Havok-1298 out of control once again. At that point, the Timebroker gained access to the evil Havok's mind and destroyed it, leaving Havok of Earth-616 in full and permanent control of his body.

Adventure Hooks

Here are some adventure hooks for Earth-1298.

- Scott (the son of Havok and Marvel Woman) telepathically reaches out to Havok. He misses his father and wants him to visit. Or has someone else planted that idea in Scott's head—someone who wants Havok back?
- Havok starts hearing the Goblin Queen's voice in his head. Supposedly she was sealed away in the Nexus of Realities, but since that was inside him, is she reaching him telepathically? Could she take over his body the way Havok-1298 once did? Or is someone trying to mess with his head?
- Man-Spider (Peter Parker but with four extra arms) didn't go back home after the latest Spider-Verse crisis. Instead, he went hunting for Havok to let him know that Earth-1298 fell apart without him. Reed Richards and Professor X enslaved Doctor Strange and tampered with the nature of the world. Parker claims that only Havok can stop them, but is he telling the truth?
- Forge goes missing, and Bloodstorm needs to feed. Are any volunteers willing to risk their souls, or does she have to look for victims for the first time in a very long while? If she does, can anyone stop her? And if she feeds only on villains, does anyone *want* to stop her?
- The Timebroker claimed to have destroyed Havok-1298, but the Timebroker is no more. The original Havok from that world returns and launches a super-villain rampage. Who can stop him? And is it really him or an impostor using his reputation?

HOUSE OF M: EARTH-58163

When the Scarlet Witch realized that her children—Speed and Wiccan—weren't real, she suffered a nervous breakdown and used her reality-warping powers to disassemble the Avengers. After she was stopped, the X-Men, Magneto and the Avengers met to discuss her fate. Believing they would kill her, Quicksilver convinced his vulnerable sister to remake the world so that mutants were in charge and everyone they cared about had their deepest wishes fulfilled.

History

In this universe, Magneto ruled over the nation of Genosha, from which he defeated the United States and brought about a mutant utopia that dominated the entire planet. The Scarlet Witch and Quicksilver were top members of the ruling family. Sebastian Shaw ran S.H.I.E.L.D., which served Magneto and trained mutant operatives to help enforce his rule. Wolverine (Logan) led its elite strike force, known as the Red Squad.

Across the world, mutants reigned supreme, and regular humans were second-class at best. Over half the population was *Homo superior*, and regular *Homo sapiens* were on the way out.

Apocalypse ruled over North Africa. Storm guided the rest of the continent, with the notable exception of Wakanda. Doctor Doom allied with Magneto early on and oversaw much of Europe, barring the UK, which was led by Captain Britain (Brian Braddock).

As part of being granted his deepest wish, Wolverine regained his lost memories, a problem that had plagued him for years. This also allowed him to remember how the world originally was. A young mutant named Layla Miller

Michael Syrett (Order #53194700)

remembered the real world too, and her powers allowed her to give those she touched their memories back.

With the help of Luke Cage and his Human Resistance Movement, the number of people who remembered the original world grew. When they had a large-enough group, they headed for Genosha to confront Magneto, suspecting that he had manipulated the Scarlet Witch into creating a world for him to rule.

During the climactic battle, Magneto learned that Quicksilver had been behind the world's transformation, and he killed his son on the spot. This proved too much for the Scarlet Witch, who brought her brother back to life and then changed everything back to how it had been.

M-Day

When the House of M came to an end, the Scarlet Witch was dismayed at how her family's desires had twisted her so badly, so she made one more change, whispering the words "No more mutants." This event, known as the Decimation, depowered the vast majority of mutants on Earth—including Magneto, Quicksilver and even Professor X, who had been missing the entire time—leaving only a few hundred untouched.

The mutants eventually recovered their powers after the defeat of the Phoenix Force during a major conflict between the Avengers and the X-Men, but that was years later.

No one has returned to Earth-58163 since the moment the Scarlet Witch returned everyone to Earth-616. There are some who theorize that worlds like this are ended by such actions. However, the Monarchy of M appeared on Battleworld, the planet ruled by Doctor Doom in the period between the Seventh and Eighth Cosmos. This implies that Earth-58163 continued on afterward and that it may have been recreated in the Eighth Cosmos as well.

Adventure Hooks

Here are adventure hooks for Earth-58163.

- Princess Lorna Magnus (Polaris) arrives from Earth-58163 and claims that her brother, Prince Pietro Magnus (Quicksilver), has mounted a rebellion against their father, King Erik Magnus (Magneto). Supposedly Prince Pietro plans to destroy all of humanity once the throne is his. She warns everyone against trying to stop him, as he's too dangerous. But who is she actually trying to protect, and why?
- The heroes awaken in Earth-58163 and find themselves transformed as if they have always lived there. Mutants have a place in Magneto's society, but non-mutants are oppressed. The heroes must figure out how to get back home—but maybe they want to know how they got there first. And why do they still remember everything when no one else seems to?
- Beast-58163 shows up and begs the heroes for help. The Decimation happened on his world as well, and he needs to repower the mutants there before humanity hunts them down and wipes them all out, a campaign that's already in full swing. Can the heroes help him? Should they? Or is there another way?
- Inhuman terrorists plan to unleash a Terrigen Mist bomb on Earth-58163, much like the bomb that was detonated on Earth-616. Can they be stopped? And if they succeed with their plans, who might survive?
- The Phoenix Force returns to Earth-58163, and the Scarlet Witch intercepts it before it can reach Jean Grey, who hasn't been seen for years. Is Grey still alive? Can she take the Phoenix Force back, or will the Scarlet Witch reign supreme?

AGE OF X: EARTH-11326

Professor X and Doctor Nemesis tried to work with Legion to help restore his mental health by removing some of his alternate personas. As a protective measure, Legion's mind developed a brand-new personality with the ability to rewrite reality, taking the form of Moira MacTaggert. She immediately set about creating a new world in which Legion was a beleaguered hero protecting all of mutantkind from humanity.

Mutants Against the World

The first thing the MacTaggert personality did was take Earth-616 and put the entire universe in a small box. Then she hid away all telepaths and put them in comas, as she knew they'd be able to discover what she had done. After that, she rewrote history so that mutants were more hated than ever.

In a desperate move, Magneto used his powers to tear up several buildings from Manhattan—including the Chrysler Building and the Empire State Building—and combined them into a massive superstructure. This became the last stronghold for the world's mutants, called Fortress X.

Mutants of all kinds flocked to Fortress X, some of them guided there by Doctor Strange, who posed as the world's most successful bounty hunter of mutants. Instead of disintegrating his quarry, though, Strange teleported them to Fortress X for safety.

Under orders from General Frank Castle (Punisher), a twisted version of the Avengers led an attack on Fortress X, along with the Invisible Woman, who turned in the rest of the Fantastic Four for harboring a mutant she saw as a threat to her son, Franklin Richards. Most of the assault team balked when they realized their orders included killing mutant children. While they battled among themselves, a select team of telekinetic mutants—soon to be known as the Force Warriors—managed to duplicate the Invisible Woman's powers before she was killed by the Hulk.

Or at least that's what everyone remembered.

The Force Warriors

- Hellion (Julian Keller)
- Legion (David Haller)
- Psylocke (Betsy Braddock)
- Revenant (a mental manifestation of Rachel Summers)
- Stand-Off (Carmella Unuscione)

Fortress X

Fortress X became an isolated city packed with mutants and overseen by a supercomputer known as X (who was secretly Legion-Moira). Every night—for a thousand days—the forces of humanity attacked, trying to break down the force-field maintained by the Force Warriors, but they always failed

Michael Syrett (Order - 53194700)

to break through. When Kate Pryde went out to explore the region beyond Fortress X, though, she returned with photos that showed the lands there were blank. Legion-Moira hadn't bothered to finish building out that part of the world.

Confronted about this, Legion-Moira confessed to what she'd done. She tried to destroy the box in which she'd stuffed Earth-616, but Kate Pryde stopped her. When Legion realized what had happened, he absorbed the Moira personality back into himself, along with her powers. Using those powers, he restored the world to the way it had been.

Aftermath

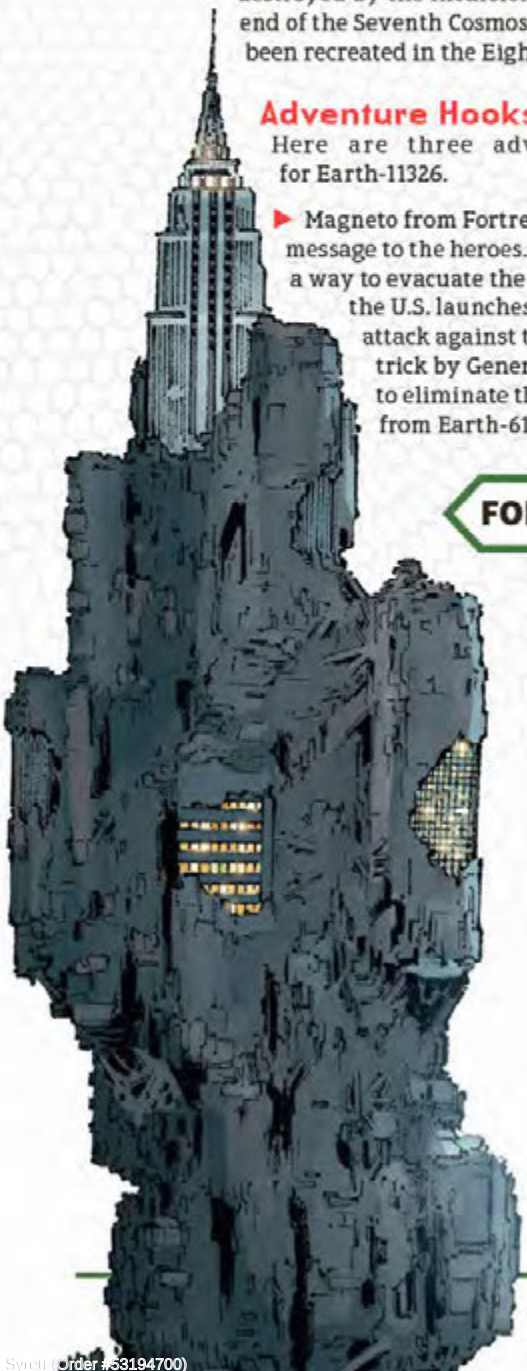
While the people in Fortress X remembered entire lives they had in that other world, only seven days had passed on Earth-616. The revived telepaths offered to remove those memories, and most people went along with that. A few, though, refused, preferring to keep those memories with them.

As with other alternate worlds, some people believed that Earth-11326 was erased when Legion returned things to normal, but it remained in its own universe. It was destroyed by the incursions that led to the end of the Seventh Cosmos, but it may have been recreated in the Eighth.

Adventure Hooks

Here are three adventure hooks for Earth-11326.

- Magneto from Fortress X sends a message to the heroes. He's looking for a way to evacuate the mutants before the U.S. launches a nuclear attack against them. Or is it a trick by General Frank Castle to eliminate the mutants from Earth-616?
- Legion sends the heroes to Earth-11326, worried that he caused this whole mess. The heroes must figure out if there's a way to change things back. Or maybe none of this is Legion's fault, and this is just a world that closely resembles the one his Moira persona built.
- A voice that sounds like that of X starts sending out messages from the ruins of Utopia, encouraging all mutants to flock there to be protected from humanity. Did the Moira persona break out from Legion again, or is someone who remembers the Age of X using it to lure mutants into a trap?



FORTRESS X

ULTIMATE X-MEN: EARTH-1610

Earth-1610—also known as the Ultimate Universe—strongly resembles Earth-616 but with a number of key differences. Unlike the previous universes, it arose naturally on its own, not due to someone rewriting reality. Narrators should feel free to let the players visit or even to set an ongoing series here.

The Shake-Up

In this world, the U.S. government program Weapon X created mutants decades ago, starting with Wolverine (Logan). Professor X and Magneto started out as partners, training recruits for their Brotherhood of Mutants in the Savage Land, but when their philosophical differences proved too great, Professor X fled to the Xavier estate. There he launched the Xavier Institute for Gifted Children, from which he recruited and trained the X-Men.

Jean Grey and Cyclops were the first X-Men. Grey went out to recruit others—Beast, Colossus and Storm—and brought them back for Cyclops to train. After an attack by Magneto's Brotherhood, the U.S. launched the Sentinels program, and the X-Men stepped up their efforts, rescuing Iceman and bringing him into the fold.

Magneto sent his top assassin—Wolverine (Logan)—to infiltrate the X-Men as a new recruit. Eventually, he turned against Magneto and became a loyal member of the X-Men. This culminated in a major battle in which Professor X seemed to kill Magneto.

Ultimatum and Other Endings

It turned out that Professor X had only mindwiped his old friend instead, and he returned. Sometime later, Doctor Doom assassinated the Scarlet Witch. Believing that both of his children had been killed, Magneto moved the planet's magnetic poles, triggering massive damage across the globe, including a tidal wave that drowned countless people in New York. He then murdered Professor X to prevent Xavier from stopping him.

The surviving heroes rallied to take the fight to Magneto and eventually triumphed over him but at an incredible cost. Of the X-Men, only Colossus, Iceman, Jean Grey, Kitty Pryde, Rogue and Storm survived.

Later, after the death of Spider-Man (Peter Parker), Kitty Pryde, Iceman and the Human Torch re-formed the X-Men after most of the team had been captured or killed. When Captain America became president of the United States, he offered the mutants a chance to live on a reservation in southwestern Utah named Utopia, and Kitty Pryde accepted on their behalf. Utopia believed in eventual integration with humanity, which put it in direct conflict with Tian—a floating mutant nation

in southeast Asia ruled by Jean Grey—which had isolated itself from the rest of the world. The two nations went to war, with Utopia winning.

The latest version of the X-Men secretly took up residence in Xavier's mansion. Earth-1610 perished at the end of the Seventh Cosmos, but it was remade at the dawn of the Eighth Cosmos. A few of the mutants from Earth-1610 survived the destruction of their world and resided in Earth-616 instead. For a time, they were brought together by Miss Sinister to act as her agents under the name Marauders. They were unrelated to other teams that have used that name. (See Chapter 7: Marauders for details about those other teams.)

Adventure Hooks

Here are three adventure hooks for Earth-1610.

- The heroes run into Carmen Cruise, a young mutant with the power to open portals between universes. She's lost her memory, and she's no longer sure if she's from this universe or from Earth-1610. She needs the heroes' help to figure out where she really belongs.
- The heroes' other selves from Earth-1610 arrive in the player characters' world, and they don't want to leave. While things might be bad here, they seem much worse back home. Should the heroes try to convince them to return? Can they? And what happens if they don't?
- The Doctor Doom of Earth-1610 has finally broken through to Earth-616, and his first order of business is revenge on the X-Men who blew up his castle. Can the heroes convince him that they had nothing to do with it? What if he doesn't care? And if their conflict with this Doom goes public, how might the Doctor Doom of their world react?

X-MEN NOIR: EARTH-90214

The Noir universe (as Earth-90214 is often called) takes elements from film noir and pulp fiction of the 1930s and 1940s and blends them with the foundations of Earth-616 to come up with a unique and flavorful setting. Games set in this universe should have a distinctly different feel. As Raymond Chandler wrote in his classic essay "The Simple Art of Murder," "But down these mean streets a man must go who is not himself mean, who is neither tarnished nor afraid... He is the hero; he is everything."

The X-Men of the Noir universe aim to be that kind of hero—even if they don't always hit that target.

Black and White

In this world, Charles Xavier (Professor X) ran a school for gifted students in upstate New York, but instead of training mutants, he trained sociopaths he called the X-Men. His friend, Chief of Detectives Eric Magnus (Magneto), tried to force him to get the students to join his corrupt crime syndicate known as the Brotherhood, but Xavier refused. When one of the students—Warren Worthington III (Angel)—jumped off the top of the school and died, Magnus charged Xavier with the crime and imprisoned him in Riker's Island. This sent the rest of the X-Men—Cyclops, Iceman, Beast and Jean Grey—on the run.

Art by Dennis Calero

Michael Syrett (Order - 53194700)

Magnus had plenty going on with his adult children, Wanda (Scarlet Witch) and Peter (Quicksilver). Spoiled Wanda had run up a huge gambling debt at a place in Harlem called the Creole Club, owned by Remy LeBeau (Gambit). Meanwhile, brilliant Peter had followed in his father's footsteps to become a rising-star detective, but being idealistic, he was shaken to his core when he learned of Magnus' corruption.

As powerful as Magnus was, he still had to answer to the real power in the city, Sebastian Shaw of the exclusive Hellfire Club. Shaw's main rival for control of the city was Unus the Untouchable, the crime lord behind the Creole Club.

When Jean Grey turned up dead from claw slashes, suspicion fell on Captain James Logan, a smuggler who favored such weapons. This drew in Thomas Halloway (the original Angel), who posed as a reporter for the *Daily Bugle* but was actually a costumed, cape-wearing hero, sharing his identity with his identical twin brother, Robert. In the end, the Halloways figured out that the body was actually Anna Marie Rankin (Rogue). Grey had killed Rogue and taken her place so that she could escape, but Robert Halloway managed to put an end to both himself and her.

And Red

Later, Xavier was freed from prison and joined by Wanda. Working with a secret government agency called O.N.E., Xavier made his stepbrother Cain Marko (Juggernaut) hire Halloway, Cyclops, Captain Logan and Logan's first mate Eugene Judd (Puck) to steal the Gem of Cyttorak. This embroiled them in a wild chase from Madripoor to the offshore U.S. prison called Genosha Bay, where Halloway was captured and tortured. After a series of back-and-forth betrayals, Halloway revealed that he had been working with the FBI the entire time to put Xavier and his crew away for good.

Playing Noir

Few people display actual super-powers on Earth-90214. The only one of notice is Halloway, who—in his Angel costume—can fly.

Characters in this world should not be higher than Rank 2, and they should have no origin other than Special Training. However, they can have a limited number of super-powers by using the Surprising Power trait.

In addition, people can kill others accidentally in this world. On top of that, the Heroic tag is extremely rare, so most characters don't have any starting Karma.

Despite these limits, adventures in this world can be incredibly tense and entertaining. They tend to revolve around peeling back layers of mystery and corruption and then forcing characters to make hard decisions once they figure out the truth.

Adventure Hooks

Here are some adventure hooks for Earth-90214.

- Cyclops, Beast and Iceman visit Jean Grey's grave and find that someone's dug it up and her body is missing. Did Jean somehow come back from the dead? Did she fake her own death? Or did Professor X decide he needed her brain for research?
- The characters are in their favorite speakeasy when the police raid the place. It turns out they're looking for the characters. One of them (or a good pal of theirs) has been framed for the murder of a corrupt cop. Who really killed the cop? Why did they pin it on the character? Or is this a case of mistaken identity?
- The characters are told that a mole has infiltrated their team, but the informant doesn't know which one of them it is. Was someone replaced by a master of disguise? Or has one of the heroes always been working against the rest? This hook works well if the players don't know which of them is the traitor till the final scene, as the Narrator has been controlling them during moments when no one was watching them.
- The characters somehow wind up in Earth-90214, where few others have any super-powers at all. They discover that they're not the first to journey to this world, and those who came before have already started to take over the planet for themselves. Will the characters stop them or join them?
- The surviving X-Men Noir teammates appear in the characters' world. They live quiet lives there until they have a run-in with the law that causes suspicion to fall on their super-powered variants. Can the characters find them? Do they bring them to justice or simply send them home?

MOJOWORLD: MOJOVERSE

The Mojoverse isn't a different universe but a dimension that stands outside of time and space, ruled by a Spineless One known as Mojo. He claims that he is unique among the universes, but this has not proven to be true. It's just as likely that every universe has its own Mojoverse—or some version of it—that exists alongside it.

Mojo's Shows

The central world of the Mojoverse is called Mojoworld, the home of the Spineless Ones, an advanced alien race that lacks a means of standing upright without artificial support in the form of exoskeletons or motorized platforms. The Spineless Ones received television signals from Earth but could not stop them, and this drove their society mad. They based their entire culture around television broadcasts, eventually creating their own and showing them to other civilizations around the known universe.

Mojo rose to prominence as the greatest of their producers, making him the ruler of their world. To this end, he—and a scientist named Arize, along with Mojo's android helpers Major Domo and Minor Domo—created or enslaved countless creatures to violently battle one another for the delight of his viewers. Eventually, one of his stars—Longshot—rebelled and escaped to Earth-616.

After recapturing Longshot, Mojo sent him back to Earth to join the X-Men and have his adventures recorded by Psylocke, whose eyes Mojo had replaced with cameras. As part of his plot, Mojo de-aged the X-Men to transform them into babies, but the New Mutants saved them.

Longshot overthrew Mojo, but his replacement—a clone called Mojo II—wasn't any better. After Longshot overthrew the second Mojo, the first returned to reclaim his place.

Mojo later tangled with the Exiles, eventually cutting a deal to broadcast their adventures across the Multiverse.

Michael Syrett (Order - 5319-1700)

Twists and Paradoxes

Mojo manipulates time in Mojoworld and often uses time travel to create seeming paradoxes. One of his most stalwart servants was a six-armed sorcerer known as Spiral. She was once Rita Wayword, a friend of Longshot's, but Mojo tortured her for countless years, transforming her into Spiral. He then brought her back to the present day to help him hunt down Longshot.

Similarly, Longshot was created from the DNA of a hero from the future known as Shatterstar. After leaving Mojoworld behind, Longshot married Dazzler and had a baby with her, and that baby was destined to grow up to become Shatterstar. To keep the timeline intact, Shatterstar wiped all memory of the pregnancy from Longshot's and Dazzler's minds and then sent his infant self a hundred years into the future of Mojoworld to be raised the way he remembered.

The X-Babies

When the X-Men went missing, Mojo couldn't risk having a drop in his ratings, so he created the X-Babies to take their place. They escaped to Earth, but he cut a solid contract with them to bring them back permanently. They lived in the Clubhouse for Gifted Youngsters on Mojoworld, and they had many child-friendly adventures.

The X-Babies sometimes squared off against baby versions of other teams from Earth-616. This included the Brotherhood of Mutant Bullies and the Mitey 'Vengers. All of them rebelled against Mojo eventually, but he made incredibly popular shows with them despite this.

The X-Babies

- Charlie X (Professor X)
- Colossusus (Colossus)
- Creepy Crawler (Nightcrawler)
- Cyke (Cyclops)
- Psychilde (Psylocke)
- Shadowkitty (Kate Pryde)
- Shower (Storm)
- Sugah (Rogue)
- Wolvie (Wolverine [Logan])

Adventure Hooks

Here are some adventure hooks connected to Mojoworld.

- Mojo decides to make a show about the heroes, but instead of kidnapping them, he tries to cut a deal with them by offering them their hearts' desires. What do the heroes really want? What happens to them if they get it? And what might they do if they discover that Mojo's promises are backed up with only fakery and special effects?
- One of the characters suddenly turns into Mysterio. They're still themselves, but they look and sound like the villain. Soon after, Mojo kidnaps the character to Mojoworld and puts them to work as his new special-effects genius. The heroes must find a way to break the character free, and they might realize they need the real Mysterio's help to do it.
- The X-Babies appear in the heroes' headquarters, complaining that they were kicked out of their home on Mojoworld after Mojo made baby versions of the heroes. Are they telling the truth? What might the heroes do about their baby versions? Does anyone know a good entertainment attorney?

PLAYING IN OTHER WORLDS

In most cases, the *Marvel Multiverse Role-Playing Game* assumes that your game is set in a universe that's either Earth-616 or as close to it as possible. However, there's nothing keeping you from setting the game permanently in another universe—or at least your variant version of it.

Establishing Expectations

The main issue to deal with when setting a game in another universe is to establish expectations so that all the players know what their characters are in for. Is this a world in which cartoon characters run rampant? Or one where death comes fast and easy?

Before starting a game in a different universe, the Narrator and the players should come to a consensus about its tone. Some Narrators might want to spring surprises on players, and that can be a lot of fun for everyone involved. However, they should take care to make sure that these surprises get the players excited rather than disappointed.

Questions to Consider

In this other universe, think about the following:

- Do people regularly come back from the dead, or is death permanent?
- Are there clear lines between heroes and villains, or are all people out for themselves?
- Do heroes usually triumph in the end, or do villains?
- Are people generally happy or miserable?
- Are people usually kind or cruel?
- What kinds of lines are people regularly willing to cross?
- Do people laugh? Are they grim? Somewhere in between?

Answers to these questions help define how the game feels and what the players might expect their characters to encounter.

VISITING OTHER WORLDS

The X-Men and other mutant teams often travel to different universes. Here's how it can work in your game.

Theme

Other universes often start with a "What if?" What if Professor X was evil and Magneto was good? What if all humans were wiped out by a virus, leaving only mutants behind?

For these alternate universes to resonate, they shouldn't be wildly different from the heroes' regular universe. The major characters in the regular world should have variants in the other world, people who look familiar but have had entirely different experiences. Sometimes these experiences change who they are, and other times they only reinforce the characters' strongest elements.

Style

These alternate worlds are usually worse than the world the heroes call home. Otherwise, why would the heroes fight to get back to their Earth or try to restore things to the way they were?

The changes in these other worlds can vary wildly. Many times, they wind up absolutely apocalyptic. Other times, the changes are relatively benign. The heroes might even want to stay there if it wasn't for the fact that they belong someplace else.

Transportation

Getting from one universe to another can be an issue. Most heroes don't have the power to manage this on their own.

Sometimes, the heroes are drawn to other universes against their will. Other times, they have to hunt for a way to get there. Often these are one-way trips, and getting back to where they came from becomes a struggle.

If the team has a hero with the power to move between universes, this problem becomes a lot more manageable—perhaps too much. Being able to commute back and forth between universes at will makes for a very different story than being trapped in a world that's not your own. The Narrator should be sure to take this into account when planning adventures.

Aftermath

Another thing to consider is what happens when an adventure in another universe ends. Is the universe sealed away forever? Can the heroes move to and from it now at will?

Beyond accessibility, consider the denizens of that other world. Are there people there who might come after the heroes for revenge? Might the authorities there want to arrest them for crimes they committed?

Conversely, might some of those people find a way into the heroes' home universe? If they do, would they be stuck there, or do they have a means of returning? How long might the heroes have to deal with them? Or would they prefer that the visitors become permanent residents?

FUTURES PAST

Most X-Men adventures take place squarely in the present day, with rare trips to the future or past. However, a number of visitors from possible futures have come back to the present to help the X-Men prevent the horrible things that lead to those potential timelines.

Sometimes a simple warning is enough to solve such problems, but those visitors often wind up remaining in the present rather than returning to their own timeline—which they believe they've just eliminated.

Due to the way the Marvel Multiverse works, though, those futures aren't destroyed. They go on as alternate universes all their own. Heroes with the right powers or equipment can visit them, and other natives from those futures can come back to try to preserve their own timelines too.

X-MEN 2099: EARTH-928, EARTH-23291 AND EARTH-2099

All the 2099s

This is a possible future in which many characters analogous to modern-day heroes and villains exist. It started out as Earth-928, but as time has progressed, changes in the present day have made this future unlikely to occur. To ensure that it does, characters from this universe—often Spider-Man 2099 (Miguel O'Hara)—have gone back to the present to reinforce their own existence.

Of course, in doing so, they didn't reestablish their own timeline, which exists in an alternate universe of its own. Instead, they spawned new universes that run parallel to their original timeline.

Earth-928

In the original timeline, war between humans and mutants devastated much of the planet. The ravages of that war, alongside catastrophic natural disasters, rendered much of the United States unlivable. Most people congregated in cities like Nueva York, leaving the vast wastelands between them to the few mutants and outcasts who survived the war.

In the U.S., megacorps like Alchemax, Angel's Breath and Stark-Fujikawa ruled over the cities, often using a private police force known as the Public Eye to protect the interests of wealthy Black Carders. Globally, five superpowers—the European Continental Consolidate, the Federated States of America, the Free Russian Alliance, the People's Republic of China and the USA—divided the world among them.

Xi'an Chi Xan, also known as the Desert Ghost, assembled a new team of X-Men in 2099 to pay homage to the original team. They first assembled in the Nuevo Sol Arcology, an abandoned settlement near Las Vegas. In their early adventures, they clashed with the Chosen, a genetically engineered team of upgraded mutant supremacists led by Master Zhao, the leader of a previous team of X-Men that he had destroyed after he became mentally unstable.

The X-Men 2099 team moved around regularly, eventually ending up in Halo City, a haven for mutants (and other victims of the sadistic Theater of Pain) that Doctor Doom established after becoming president of the United States. They served as law enforcement in Halo City, calling themselves the Protectorate.

X-Men 2099

- Bloodhawk (Lemuel Krug)
- Cerebra (Shakti Haddad)
- Desert Ghost (Xi'an Chi Xan)
- Krystalin (Krys Porter-Ogada)
- Meanstreak (Henri Huang)
- Metalhead (Edward van Beethoven)
- Serpentina (Kimberly Potters)
- Skullfire (Tim Fitzgerald)

The alien Phalanx later invaded and flooded the entire Earth by melting the polar ice caps, and the Atlanteans took advantage of this to invade the deluged cities. During this time, Halo City was destroyed. In the aftermath, the X-Men relocated to the Savage Land to establish a new mutant homeland there. After Halo City was rebuilt, it was renamed Xavier City in honor of Professor X.

The Road to Earth-2099

Like many other universes, that of Earth-928 was destroyed with the end of the Seventh Cosmos. Fragments of that universe became part of God Emperor Doom's Battleworld in a realm known as 2099. After the birth of the Eighth Cosmos, Earth-928 was recreated but with some differences that incorporated the changes that happened on Battleworld.

This future—known as Earth-23291—was supposedly the one Earth-616 was destined to have, given enough time. Changes in the present timeline, however, made that future increasingly unlikely. In an effort to repair the damage done to the timeline (at least from his point of view), Spider-Man 2099 traveled back to the present.

This caused a number of rippling effects that altered the future again and again, creating (or at least visiting) new universes each time. In the end, these timelines coalesced into a new future for Earth-616 known as Earth-2099. And with it, a new X-Men 2099 team was formed.

X-Men 2099 of the Celestial Garden

- Bloodhawk (Lemuel Krug)
- Cable (Nathan Summers)
- Cerebra (Shakti Haddad)
- Cyclops
- Deadpool (Warda Wilson)
- Krystalin (Krys Porter-Ogada)
- Northstar
- Phoenix
- Rogue (Anna Marie)
- Skullfire (Tim Fitzgerald)
- Tulkas

This X-Men team leads a nomadic X-Nation that was driven from the Savage Land by Norman Osborn and his Cabal. Joining with Spider-Man 2099, they were able to defeat Osborn and claim a garden that had formed from the dead body of a Celestial. They built a new X-Oasis and shared their gifts with the world.

Adventure Hooks

Here are some adventure hooks connected to Earth-2099.

- Winter has come to the Savage Land, forcing the X-Men out of their haven there. They need to figure out who is responsible for this drastic climate change and make them reverse it fast. Could it be a mutant controlling the weather? Or a returned god like Thor?
- Alchemax has supposedly developed a "cure" for the X-Gene and is about to deploy it in the water of Nueva York. Is this true or just a means of drawing out mutant resistance? Could the cure actually be a means of infecting the populace of Nueva York with the X-Gene, bringing about a new generation of mutants?
- Someone has been stealing dinosaurs from the Savage Land and introducing them into other environments around the world. Is this a plot by Atlantis to harry the last few settlements on dry land, or has life simply found a way out?

DAYS OF FUTURE PAST: EARTH-811

Mutant Concentration Camps

The X-Men often deal with prejudice against mutants in their time that threatens to lead to the worst kinds of outcomes. In such cases, they fear that mutants could be outlawed, arrested and rounded up into concentration camps, purportedly for the protection of humanity. So far, such horrible events haven't come to pass, but they've often been far too close to happening for anyone's comfort.

In several dark futures, such horrors have come about. The first of these that the X-Men encountered is known as the Days of Future Past, a possible future in which nearly all of the team have been slain or apprehended, along with any other mutants. In this world, Senator Robert Kelly was assassinated in Washington, DC, by the Brotherhood of Evil Mutants in an attack that also killed Professor X and Moira MacTaggert. That sparked an anti-mutant movement that led to the U.S. government launching a new line of A.I.-powered Sentinels to put an end to mutants.

To accomplish this, the Sentinels took over the entire nation and began rounding up anyone with super-powers, mutants and humans alike. Those who resisted were killed, while the rest were imprisoned in concentration camps. This included Colossus, Franklin Richards, Kate Pryde, Magneto, Rachel Summers (daughter of Cyclops and Jean Grey) and Storm, who were imprisoned in the South Bronx Mutant Internment Center. Wolverine (Logan) managed to escape to Canada, where he helped run the resistance.

Warning the Past

A cyborg known as Ahab led a program in which he brainwashed mutants with tracking abilities into serving as his Hounds. These subjugated mutants wore spiked black bodysuits and collars and were branded with slash marks around their faces, and they were forced to hunt and kill other mutants. Rachel Summers was one of these Hounds, but she managed to break free of the brainwashing, after which she was thrown into the internment center with the other captive mutants.

Michael Syrett (Order - 53194700)

There she fell in love with Franklin Richards, and the two of them figured out a way to nullify their power-dampening collars. Summers used her telepathic powers to send Kate Pryde's mind back in time to take control of her teenage self, who had recently joined the X-Men. Young Kitty warned her teammates about the impending assassination of Senator Kelly, giving them the chance to stop it.

Summers later managed to travel back in time physically, with the help of the Phoenix Force, with which she bonded for a while. She became a part of the X-Men and later joined Excalibur. She eventually returned to Earth-811 with Excalibur, and they altered the programming of the Sentinels to make them preservers of life, putting an end to their reign of terror.

Adventure Hooks

Here are some adventure hooks connected to Earth-811.

- One of the Sentinels was dormant when their programming was changed, and it remains dedicated to their original destructive goals. Can the heroes find it among the other Sentinels? Or will it find a means to spread its original programming like a virus, returning all Sentinels to their murderous ways?
- Sentinels from Earth-811 find their way to the heroes' universe, determined to destroy any Sentinels they discover there, no matter the cost. How far are they willing to go? And will the heroes help or hinder them?
- Despite the change in the Sentinels' primary programming, some people are still afraid of mutants. When mutants released from the notorious South Bronx Mutant Internment Center start turning up dead, the heroes must figure out who's committing the murders—before they become the killer's next targets.

CABLE'S FUTURE: EARTH-4935

Future Son

When Nathan Summers was still an infant, Apocalypse infected him with the Techno-Organic virus to kill the child who was supposedly destined to defeat him. Soon after, Sister Askani from Earth-4935—a possible future 2,000 years ahead—arrived and offered to take young Nathan to the future where Clan Askani would save him and raise him.

In this future world—which Apocalypse ruled over—a woman known as Mother Askani raised Nathan. She turned out to be an older version of his sister Rachel Summers, who arrived there from a different point in the past. Because of fears that Nathan would die, a clone of him was made who Apocalypse later captured and raised, calling him Stryfe.

Nathan later helped destroy Apocalypse, as prophesied. A group known as the New Canaanites stepped into the power vacuum created by Apocalypse's death, and Nathan worked to rebel against them as well, fighting against Stryfe and his Mutant Liberation Front.

Nathan took the name Cable and began traveling back to the present day and to other points in time, including that of Earth-2099 and ancient Egypt. Back on Earth-4935, Cable fell in love with Aliya, later known as Jenskot, and she had a baby who grew up to be Tyler Dayspring. Dayspring later became the time-traveling villain Genesis and died at the hands of Wolverine (Logan).

Future Devastation

Despite being advanced over the present day by 2,000 years, Earth-4935 does not feature inconceivably cutting-edge technology. The New Canaanites live well, but the people who resist them—Clan Chosen and other offshoots of Clan Askani—must hide in the wilderness to avoid detection.

Art by Mark Bagley, John Dell & Andy Troy

Michael Syrett (Order - 5319-1700)

Worse yet, the ability for people to travel into the past has destabilized Earth-4935. Such travelers must take care not to allow things to deviate too far from their own history if they wish to ensure that their future actually happens (or so they believe).

Adventure Hooks

Here are some adventure hooks connected to Earth-4935.

- Cable travels to the present day and reveals to the heroes that what they're doing jeopardizes the future from which he comes. Do they care? Can they be sure he's not lying? Or that he's even Cable?
- The New Canaanites launch what they hope is a final assault against the rebel forces. If it succeeds, no one can stop them from ruling over the future with an iron fist.
- Apocalypse reappears in the future. Has the ruler returned from the dead? Is he a visitor from the past? Or is he an impostor hoping to capitalize on the legendary mutant's reputation?

BISHOP'S FUTURE: EARTH-1191

Hope Ends Everything

Hope Summers was the mutant messiah, the first mutant to be born after M-Day, the one who would eventually use the power of the Phoenix Force to overturn the elimination of mutants and allow them to become plentiful once again.

In the possible future known as Earth-1191, Hope killed a million humans, leading to the demonization of all mutants and the activation of Sentinels to round them up or destroy them. This included the destruction of the X-Men and all affiliated teams. Those who survived had an M tattooed over their right eye to warn the world of their status as mutants. The U.S. government even planned to start testing everyone to see if they were capable of becoming or producing a mutant.

During this time, the mutant Layla Miller arrived from the past and helped to foment what became known as the Summers Rebellion, led by Cyclops and his daughter, Ruby Summers, whom he had with Emma Frost. The rebellion liberated all mutants, but at the cost of Cyclops' life.

The X.S.E.

A radical mutant group known as the Exhumes began attacking humans, which risked causing another crackdown on mutants as a group. To stop them and to show that mutants could police themselves, a group called the X.S.E.—the Xavier Security Enforcers—was formed. These elite mutants were trained to use their powers to keep other mutants in line and thus ensure safety for them all.

Young Lucas Bishop joined the X.S.E., where he and his sister, Shard, soon became top officers. Shard died at the hands of her boyfriend, Trevor Fitzroy. When Fitzroy escaped justice and fled to the past, Bishop pursued him through time to Earth-616. Afterward, Bishop remained there more or less permanently, joining the X-Men, who were only legends in the era he came from.

Adventure Hooks

Here are some adventure hooks connected to Earth-1191.

- A new group of X.S.E. officers appears in the present day, claiming to be in hot pursuit of a mutant criminal from their own era. They seem to believe that the person they're after is one of the heroes. Are they right? Or has the fugitive used the hero to throw the officers off their scent?
- The X.S.E. holds a recruiting drive, and one of their captains picks out one of the heroes as a top candidate. The heroes are now under the X.S.E.'s watchful eye, for better or for worse.
- The heroes are accused of breaking the law, and the X.S.E. is sent to bring them in. Have they been falsely accused, or is there some merit to the charges? Either way, how will they avoid being tossed into jail?

OLD MAN LOGAN: EARTH-807128 AND EARTH-21923

Wolverine's Worst Nightmare

In this dystopian future (Earth-807128), the villains united under the guidance of the Red Skull to destroy all the heroes and then divided the United States (now known as Amerika) among themselves. During the initial attacks, Mysterio tricked Wolverine (Old Man Logan) into seeing his X-Men teammates as villains, and he slaughtered them all. After that, Wolverine forswore violence, becoming a pacifist. Years later, he settled down on a farm where he and his wife, Maureen, had two children.

By this time, the Hulk (Bruce Banner) and his descendants had taken over California, a new Kingpin had taken over the West, Doctor Doom ruled over the Midwest and the Red Skull oversaw the East Coast as the president. When a blind Hawkeye (Clint Barton) hired Wolverine to help him cross the country in the Spider-Mobile, it all went bad, and Wolverine ended up killing the Red Skull. When he returned home, he found his wife and children murdered, and he went on a rampage, killing the entire line of Hulks, except for an infant he took into his own care.

The Return of the Wastelands

This world was destroyed along with the Seventh Cosmos, and its remains were used to create a portion of Battleworld known as the Wastelands. After the creation of the Eighth Cosmos, it was remade as Earth-21923. However, Old Man Logan found himself on Earth-616, where he set about trying to prevent his future from happening. He later discovered that the Wolverine of this world was dead, which meant that this universe wasn't actually his own past, and he gave up his plans. He even joined the X-Men and had many adventures with them.

Soon after the younger Wolverine returned from the dead, Old Man Logan returned to his own universe, where it turned out he had been gone for seven years. During that time, Doctor Doom annexed the Red Skull's portion of Amerika, and many factions were out to kill or capture the young Hulk, who had been left in the care of Danielle Cage, the daughter of Luke Cage and Jessica Jones. Their greatest enemy turned out to be Mister Sinister, who cloned an army of Sabretooths to hunt them down.

In the course of their struggles against Sinister, Danielle Cage found and took up the hammer of Thor Odinson, becoming the new Thor. Old Man Logan eventually died and was buried next to his wife and kids.

Adventure Hooks

Here are some adventure hooks connected to Earth-21923.

- Thor (Danielle Cage) thinks she's figured out a way to open the Rainbow Bridge to Asgard, but she doesn't want to go there alone. Both Thor and Loki died in the great battle 50 years ago, and no one's heard anything from Asgard since. Was Asgard destroyed as well? Or did the gods there simply cut off all ties with Earth?
- Old Man Logan's grave was dug up, and his body has disappeared. Is he back from the dead? Did someone steal his corpse to sell all the adamantium lacing his skeleton? Or is something more horrible in the works?
- The Red Skull has recently reappeared, and he seems to be mounting an army to challenge Doctor Doom's supremacy across the eastern half of Amerika. Is it really the Red Skull or perhaps a clone being manipulated by Mister Sinister? Or could it be a Skrull with fascist ambitions?
- Doctor Doom learns of a means to travel to the heroes' universe, which he now realizes is not his world's past but an alternate universe. He hopes to steal everything he needs from their world so that he can rule the entirety of his planet—and then come back for theirs.

RESTARTING TIME

Moira MacTaggert has an unusual power that was recently revealed. Whenever she dies, the entire timeline that she's in restarts from the moment of her birth—or at least this is how it seems to her. She relives her entire life over from the start, with all of her memories of her previous lives intact.

Reborn to Die

MacTaggert believes that every time she dies, the entire timeline she was in restarts with her. Of course, she has no way to confirm this. It's also possible that she is reborn in a new universe and the universe she just died in continues on without her. If so, that means each of her lives was spent in a separate universe that someone with the appropriate powers might be able to visit.

It also means that the people from those universes might be able to find their way to MacTaggert's current universe.

Moira's Ten (or More) Lives

In Earth-616, MacTaggert is on her tenth life. A short recap of each:

1. MacTaggert marries and has three children. She dies of heart failure at 74 years old.
2. MacTaggert has all her memories of her past life, even before her birth. She figures out that she's a mutant, but she dies in a plane crash when flying to meet another mutant: Charles Xavier.
3. MacTaggert devotes herself to finding a "cure" for mutants. The Brotherhood of Evil Mutants finds her

Michael Syrett (Order - 53194700)

and kills her, but not before Destiny—who knows about her power—warns her that she has only ten or eleven lives in total.

4. MacTaggert marries Charles Xavier and works with him to understand and educate mutants. Sentinels kill them.
5. MacTaggert reaches out to Xavier earlier and reveals how poorly humanity treats mutants. They co-found an isolated mutant nation called Faraway. Nearly twenty years later, Sentinels kill her.
6. MacTaggert manages to live a thousand years, but she winds up in a mutant preserve overseen by a post-human called the Librarian. The post-humans planned to join the Phalanx and be absorbed into their hive mind. She lets Wolverine (Logan) kill her before this can happen.
7. MacTaggert decides to destroy the Trask family to keep them from creating the Sentinels, but they get invented anyway. She is killed while investigating a Sentinels factory.
8. MacTaggert reaches out to Magneto this time and tries things his way. When he attempts to nuke Washington, DC, the heroes of the world—mutants and humans alike—unite to stop him, and she is killed along with him.
9. Desperate, MacTaggert—soon after known as Mother Akkaba—awakens Apocalypse early. He forms a group of X-Men and launches a war against humans and A.I.s. When the fight goes badly, the X-Men set out to learn how Nimrod—the ultimate A.I. Sentinel—was created. Once they do, the Horseman known as War (this world's version of Wolverine) kills MacTaggert so she can warn the next universe.
10. MacTaggert is reborn in Earth-616. She reaches out to Charles Xavier while he is studying at Oxford and reveals all she knows. They work together for years, and at a certain point, she fakes her death so she can focus on collaborating with Professor X and Magneto to found the nation of Krakoa. Secretly, though, she was working to eliminate mutants. Later, Mystique removed her powers, and MacTaggert died not long after. However, she returned as a cyborg bent on revenge against all mutants for betraying her.

Each of these lives happened in a timeline that only MacTaggert recalls. Some of them don't vary much from Earth-616 at all, while others lasted for centuries past Earth-616's current day.

Sinister's Many Sins

When Mister Sinister discovered MacTaggert's unique power, he realized he could use it to try different plans for taking over the planet and perhaps even the universe. He made clones of her that he could then kill to reset the timeline, bringing him knowledge of how things had gone so he could improve upon his plans the next time around. He treated this like a save point in a video game, a moment he could always return to if necessary.

Mister Sinister used this as a means of assassinating members of the Quiet Council of Krakoa to eventually become an all-powerful A.I. known as a Dominion. On his tenth attempt, he succeeded. In addition to the murders, he suborned other members of the Quiet Council by meddling with their DNA during the resurrection process, giving him full control. Those who were taken over bore a red diamond on their forehead, much like Mister Sinister, which they often kept hidden till the right moment.

This timeline lasted for a thousand years until MacTaggert managed to kill her clone and reset everything to the save point.

In the course of this timeline:

- Krakoan telepaths begin taking over humans across the planet. The Quiet Council also starts offering resurrection to powerful and influential humans so they can be suborned as well.
- The Quiet Council lobotomizes Krakoa, the living island.
- The Thing kills the Fantastic Four.
- Captain America kills the president of the United States and takes over the country, but the X-Men defeat him and the Avengers, setting themselves up as the world's greatest heroes.
- Storm leaves the Quiet Council and forms an alliance with Mystique and Destiny, making her one of the most wanted people on the planet.
- The Quiet Council cuts Asgard off from Earth and assassinates the Scarlet Witch.
- Mister Sinister devises chimeras, clones that have powers from multiple mutants. He starts out with two sets of powers at a time, but eventually works up to five, as seen with Rasputin IV.

- Mars/Arakko is destroyed.
- Mister Sinister's allies on the Quiet Council turn against him, pushing for interstellar conquest, and Orbis Stellaris (another clone of Nathaniel Essex) steals the MacTaggert clone so he can't reset the timeline.
- Mutants create the most powerful spacefaring empire in the galaxy. They destroy all other threats, including Asgard. They also take over all the realms of Hell.
- Rather than instituting peace, the mutant forces splinter and fight among themselves, creating a perpetual state of conflict.

All of this would have been forgotten but for the fact that MacTaggert sent this knowledge back to the present via the Reliquary Perilous, a device created by Mother Righteous (a clone of Nathaniel Essex's wife). This brought Rasputin IV back with it, making her the only known survivor of this timeline.

Adventure Hooks

Here are some adventure hooks connected to Moira MacTaggert's timelines.

- A diamond appears on the forehead of one or more of the heroes. How did it get there? Did Mister Sinister alter their DNA at some point? Or is it just an illusion to set the heroes against?
- Moira MacTaggert has been brought back from the dead. Does this mean that the timeline she died in restarts again? Or was she not actually dead in the first place?
- Mother Akkaba (MacTaggert from her ninth life) arrives in the heroes' timeline and asks them to help her locate her version in this world. Is this real, or is the anti-mutant group known as Orchis using this as a way to trick the heroes into doing its dirty work?
- Diamonds begin appearing on the foreheads of powerful mutants, with the notable exception of the heroes. Can they figure out Mister Sinister's plot and stop it? Or is one of Nathaniel Essex's other clones behind this?

PLAYING IN OTHER TIMES

Time travel happens now and then. Here's how it can work in your game.

Theme

As with playing in other worlds, the theme behind time travel is often "What if?" In this case, though, the questions can hew much closer to home. They usually spring from the idea that horrible things are about to happen, which the heroes can avoid if they listen to a proper warning from the dark future.

The game can be set in the present and have such warnings sent back to the heroes, or it can take place in that awful future—or at least start there. In such a game, the heroes often begin in that terrible future and then head back to the past to help change things.

Style

Such adventures are often laced with desperation. Something has happened in the future that spurs the heroes to reach back to the past to change things, and they usually feel that they have no other choice. The forces arrayed against them in the future are too powerful for them to triumph against, so they must return to a point at which they can still hope to prevail.

It's possible to turn that around by having those who travel to the past discover a vital bit of information that can help them in their own time. Perhaps they figure out who was really behind all their troubles, or they learn the secret cure to the disease that plagues them all. Then they just have to make good use of that knowledge, although that's often far from a simple task.

Transportation

For the heroes to take part in time-traveling adventures, they need a means of moving through time. If one of them has that sort of power, that's simple enough. Otherwise, the Narrator can help by providing limited means for them to make such trips. This can include physically traveling in time, mentally traveling in time or even having someone reboot the timeline for them from a certain point in the past.

Note that time travel follows the rules described in the *Core Rulebook*. However, the heroes might have other theories about how things work, and their adventures might seem to corroborate such theories.

Aftermath

When adventures through time come to an end, the heroes might need to decide if they want to return to their home era—assuming that's even possible. If a character goes into the past and brings about some sort of change, when they travel forward in time they arrive in a different possible future than the one they left.

To reach their original point of departure, they need to use multiversal-travel powers instead, and when they arrive, they find that nothing much has changed. This might make them wonder why they went back to the past in the first place if it didn't alter things for them and the ones they care about. They can only take solace in the fact that they managed to change things for other versions of themselves and give them better chances to make things right.

NEW RULES

The *Core Rulebook* covered all sorts of details about how to play role-playing games in the Marvel Multiverse, but it couldn't cover every possible aspect of every kind of character in such a wild and amazing setting. This chapter delves a bit further into some character-defining details, like origins, traits and tags, and it even introduces a number of new powers.

Some of these powers expand on existing power sets. Others belong to all-new power sets of their own. In addition, this chapter introduces an entirely new kind of power: narrative powers. These powers can be described and understood but are difficult if not impossible to fit into the existing powers framework. Such powers are restricted to characters controlled by the Narrator.

On top of all that, this chapter has new rules for how to handle mental combats, how to create teams and countless other details that should make your adventure feel more tailored not just to the Marvel Multiverse but to the X-Men and their many affiliated friends and foes.

While these new rules are inspired by and designed to work well with the X-Men and other mutants, unless the text specifically says otherwise, you should feel free to use them in games using characters with any sort of origins.

TEAMS

The X-Men started out as a team of young mutants, and they've gone through countless versions of that group and even more spin-off teams. Much of this book is focused on the various teams that they and other mutants have been a part of over the years since Charles Xavier gathered the first class for Xavier's School for Gifted Youngsters.

Super heroes (and even super villains) commonly form teams. While their members may have strong personalities that clash with one another, as a team, they are far more than the sum of their parts and can accomplish things that no single one of them could manage on their own.

While there are always exceptions—and often wonderful ones—most teams need a few things to work well:

- A reason to work together
- A place to be together
- A way to get where they need to be

If the players are forming a new team, they should keep all of these needs in mind. The better they can satisfy them, the more likely the team can stay together.

A Reason to Be

For many teams, the initial reason to get together is to confront an adversary. This can take the form of a mirror-image team, but it works better if the adversary is more powerful than the team—something they can't hope to quickly defeat. For the X-Men, Magneto and his Brotherhood of Evil Mutants served this role, at least at first.

Other teams share an ideal that provides them with ongoing adversaries. The X-Men, for example, work to make the world a better place for mutants to live in harmony with regular humans. This gives them two major adversaries, both of which deeply disagree with their stated ideal:

- Regular humans who fear mutants
- Other mutants who advocate for separation or supremacy rather than harmony

Michael Syrett (Order #53194700)

For an ongoing series, the biggest benefit of this is that even if the team defeats one group that fights against their ideal, others are often ready to step into their place. Even when the team seems to be triumphant—as with the foundation of the nation of Krakoa as a mutant homeland—there are forces working against them. These forces can be defeated but never fully destroyed.

A Place to Call Home

While a team can spend a lot of time on the road or even on the run, they often need a place to rest, hide, train and plan. A headquarters.

The X-Men have had numerous headquarters over the years, from the Xavier mansion to Krakoa. Most of the time, these places have served as a school, training facilities and home. This helps make the team feel more like an extended family rather than simply a group of people who work with one another.

Living under the same roof increases the interaction among the characters. Otherwise, the team winds up with each of them having their own families and friends they see every day, providing them with individual distractions from the team and its mission.

Mutants fit this kind of situation well, as they are often outcasts in their own communities, and more than a few of them have been kicked or driven out of their homes. They have no other place to go, so they must make a place of their own.

Of course, headquarters usually aren't free. In game terms, it helps if at least one of the characters on the team has the Rich tag. Alternatively, they might have Connections to other people or organizations that have deep pockets. As such, they can provide the necessary finances for the headquarters. Otherwise, the team might find themselves living rough instead.

A Ride to Work

Teams often deal with challenges that aren't just down the street. They need a way to get to where the trouble is.

Some super-hero teams have a member with teleportation powers who can get them anywhere they need. During the Krakoan era, most mutants could use the Krakoan gateways to travel around the world in the blink of an eye. In the years before that, the X-Men relied on mutants like Gateway and Manifold for transport.

When such powers aren't available, a team must turn to other means of travel. Flying on commercial aircraft works, but it can be slow, and in the business of saving the world, minutes matter. Many teams employ private aircraft like the *Blackbird* to get them where they must be as fast as possible.

But such aircraft are exorbitantly expensive, and they often get damaged during missions. Again, it helps if one of the characters on the team has the Rich tag or Connections to someone or something with great resources. It wouldn't hurt if at least one of them has the Piloting trait too so they don't have to risk the lives of a flight crew in addition to their own.

Team Friction

When setting up a team of characters, the players should decide if they want to work like a well-oiled machine, or if they have different agendas and styles that are fated to clash spectacularly. There's no wrong answer. It just depends on the kind of game the players want to have.

Would they rather focus on high-stakes action, or are they more interested in interpersonal drama? It's possible to have both, as the X-Men have proved since their first outing, but the players should consider which direction they would prefer the game to lean before they start.

If there's too much action, the characters might not have enough time to breathe and grow. On the other hand, if the drama gets to be too much, the team might fracture, which could spell the end of the game—at least with that particular team.

Team Changes

Members leave teams all the time. A character might have finished what they personally came to do, even if the team hasn't met its larger goals yet. They might have an emergency elsewhere that demands their attention. They might even get killed.

When a character leaves the team, it's up to the players how they'd like to proceed. They can soldier on without the missing character—reduced in force but not determination—or they can add new ones to the game to replace them.

If a character is gone but the player wants to keep playing, that player should come up with a new character or take on the role of an established character who's a new addition to the team. If the player has departed as well, the remaining players should decide if they want to invite new players in or not. Keep in mind, though, that teams can lose only so many players before the nature of the game changes to solo play or team-ups.

NEW TEAM MANEUVERS

To reflect how each mutant team works just a bit differently than the rest, here are new choices for team maneuvers to use with them. Feel free to incorporate these as options for player-created teams as well.

These maneuvers are available *in addition to* the standard ones. The team needs to choose one before they begin an adventure, just as they usually do, making sure that they meet the level requirements. These new maneuvers simply give them extra choices. When selecting one of these maneuvers, players should list its name in the notes section of their character sheet.

Alpha Flight

Need a Hand, Bub? (Offensive, Level 2)
Wolverine (Logan) makes a surprise appearance and joins the team for the rest of this fight. He's passing through on a separate mission and has to leave immediately afterward. (This maneuver can be used only once per adventure.)

Exiles

Outta Here! (Defensive, Level 2)
If the team has a Tallus, it realizes that the team members are overmatched and spontaneously transports them back to the Crystal Palace.

Marauders

Boarding Action (Offensive, Level 1)
Each team member gets an additional movement action for free this round.

New Mutants

Lessons Learned (Rally, Level 2)
Each team member can check an additional box on the Schooling Advancement Chart (page 133) at the end of this adventure. A character can only benefit from this once until the character gains a rank, after which they can benefit from it again.

X-Factor

Get a Clue (Rally, Level 1)
Each team member has an edge on checks made while looking for clues or asking people questions. This lasts for one hour or until they leave the vicinity.

X-Force

Gloves Off (Offensive, Level 2)
Any damaging attack the team members make this round automatically causes bleeding, no matter what kind of attack it is.

X-Men

This maneuver is meant for use during the Krakoan era, but it can be modified to work in any situation in which the characters have access to resurrection.

Instant Comeback (Rally, Level 3)
A single member of the team who has been killed in this battle is immediately resurrected on Krakoa at the end of this round with full Health and Focus and with all of their memories intact. If they have a means of returning to the team—say, by using a Krakoan gate—they can do so right away.

MUTANT REPUTATION

A core part of many X-Men stories—or any stories that involve mutants—focuses on how the public sees them. This affects the kind of response they get when operating in the open and the reactions they get from people on the street.

Much of the time, the way people respond to mutants is beyond the capability of any one mutant to affect. The best they can do is try to be decent people and hope that others recognize their humanity. Sometimes, though, when the tide is turned against them, it's a struggle to manage that.

Mutant Reputation Effects

This is an optional system that Narrators can use in a game or ignore entirely. It comes into play when a character interacts with someone who does not know them personally, and usually only when the character is identified as a mutant.

There are five levels to how the public feels about mutants, as shown on the Mutant Reputation table.

When a character makes an Ego check to influence or persuade another person, apply the trouble or edges listed.

Example: *Wolverine is sneaking through a back alley, and a woman hanging her laundry above spots him. He gestures for her not to scream. The Narrator asks for a non-combat Ego*

ichael Syrett (Order #53194700)

Mutant Reputation

Reputation	Effect	Ego Check Effect
Beloved	People cheer when the character arrives. They ask for autographs. They say their money is no good here. Mobs of admirers may form.	Double edge
Liked	People smile when the character arrives. They feel safer having them around.	Edge
Neutral	No effect.	No effect
Feared	People cross the street to avoid the character. They try to never be alone with them.	Trouble
Hated	People distrust the character. Given a chance, they might even attack them, if they think they can get away with it. Angry mobs may form.	Double trouble

check vs. the woman's Ego defense, and he tells Wolverine's player that he has trouble because mutants are feared.

*The player rolls and gets 3 **M** 4, plus his Ego of 1, for a total of 14 against the woman's Ego defense of 11. Normally, this would be a Fantastic success, but since Wolverine has trouble, the player has to reroll the M. They get a 2 this time, which gives them a total of 10, a failure. The woman screams for help!*

Reputation applies only if the person to be persuaded knows—or at least strongly suspects—that the character is a mutant. For example, Ms. Marvel learned that she is a mutant as well as an Inhuman. However, the public didn't know about her change in status, so it didn't affect their opinion of her.

When Ms. Marvel decided to announce her status and began wearing a costume that bears a common X-Men symbol, the public learned that she was a mutant. Now the mutant reputation effects apply to her too.

Note that these effects stack with others, and edges from other sources can help cancel out the trouble from being a mutant.

Changing Mutant Reputation

For most of the X-Men's history, mutants have been feared. They had to put up with this prejudice even though they worked hard to improve the reputation of mutants around the world. Often the public's high opinion of the X-Men canceled out their fear of mutants in general, leaving most people neutral toward members of the X-Men.

In the same way, the low opinion of mutants combined with the fear cultivated by the Brotherhood of Evil Mutants to make Magneto and his team one of the most hated mutant groups on the planet. The Brotherhood strove to make humans fear mutants, and they often got their wish.

During the Krakoan period, mutants made a strong push to win the hearts and minds of the public. They gave free medication to the world, extending the average life span by five years. This transformed them from feared to liked, and their strongest representatives—the X-Men—were often beloved.

After the fall of Krakoa, mutants tumbled all the way down to being hated, not through their own actions but due to the machinations of Orchis. Now they work once again to clear their names and get back to something more even.

In the course of a game, it's difficult for the characters to affect the way the public feels about mutants. Even if they do something heroic, the world has to learn about it. This is usually something that happens after an adventure rather than in the middle of it.

After the end of an adventure, the Narrator should consider two things. First, is news of what happened likely to get out? Second, if it does, what is the likely effect of that news?

With that in mind, the Narrator can alter the mutant reputation to suit the moment. For instance, if the heroes save the world in an incident that is broadcast live around the globe, their reputation could increase by two steps, from (for instance) feared to liked.

Remember, though, that reputations are based not on facts but on appearances. If the heroes save the world but circumstances make it appear that they threatened innocent lives, their reputation would plummet instead.

Governmental Effects

The laws in the area the characters are in can have a tremendous impact on their reputation. It's rare for super heroes of any kind to be legally sanctioned—especially mutants—but when they are, it bumps their reputation up by one level. For example, if people are neutral about mutants, the sanctioned ones would be liked. Conversely, if mutants or super-powered people are outlawed in a place, their reputation is lowered by one level instead.

In many situations, the government only sanctions particular heroes or members of certain teams. When X-Force was working for the U.S. government, for instance, the entire team was sanctioned.

In mutant-centric nations, the reputation of mutants bumps up to beloved, at least while the nation is intact. Places like Utopia, Genosha and Krakoa were mutant nations at one point, but they have all since been destroyed.

In many places, laws restricting mutants—or even just super-powered people in general—are often proposed and sometimes even passed. When Wilson Fisk (A.K.A. the Kingpin) became the mayor of New York City, unsanctioned super-powered people were outlawed for a time. Many people, including police officers, turned a blind eye to heroic offenders, but those same people were happy to use the law against mutants the moment the tide turned against them.

GETTING SCHOOLED

Schools have always played a large role in mutant stories, starting with Xavier's School for Gifted Youngsters. Under the tutelage of older and wiser mutants, the students study

Michael Syrett (Order - 5319-1700)

hard to learn how to make the most of their powers. This is often a gradual advancement that represents the benefits of constant training rather than happening in leaps and bounds.

For this reason, we're introducing a new means of advancement between ranks.

If a character has yet to hit their rank cap, they can use this method. While it's designed to work best with young mutants undergoing exhaustive training, the Narrator should feel free to use it with any kind of character.

Rising Through the Ranks

The space between one rank and the next is divided into tenths as shown on the Schooling Advancement Chart. Every time the character undergoes intensive training or has an adventure, they can check off one box of their controller's choice (player or Narrator) and take the bonus that goes with it.

The player can choose powers that have a prerequisite of the rank that the character is moving up to. For example, if the character is Rank 3 and advances on this chart, the player can pick powers for them that have a Rank 4 or lower prerequisite.

SCHOOLING ADVANCEMENT CHART

☐ Ability point	☐ Power
☐ Ability point	☐ Power
☐ Ability point	☐ Power
☐ Ability point	☐ Power
☐ Ability point	☐ Trait

Also, a character can trade a power pick for an ability point or a trait, just as they normally can.

Once the character has marked off all ten boxes, they rise up to the next rank and receive the remaining bonuses for ranking up that they haven't been awarded yet. This includes adding +1 to their damage multipliers and +1 to their Karma.

Art by Alberto Alburquerque & Carlos Lopez

ichael Syrett (Order #53194700)

Recalculating

Every time the character gains an ability point, the player should recalculate any other values that might depend on it. This includes:

- Ability defenses
- Health
- Focus
- Damage bonuses
- Initiative Modifier
- Speeds

Rate of Advancement

How quickly characters can rise through the ranks is up to the Narrator. In general, a character should get to check one box every time they have a major battle or encounter in an adventure in which they use their powers. This should be one in which the outcome is uncertain, usually against foes of equal or higher rank.

A character can also check off a box after undergoing training. The X-Men could get one for training in the Danger Room, for instance. However, once a character checks off a box for training, they cannot do so again until they check off another box for adventuring.

NEW EQUIPMENT

While most mutants rely entirely on their own inherent powers, there are some kinds of equipment that come up regularly in mutant adventures. Here are the most common of these, along with how they work in the game.

Adamantium

Adamantium is an incredibly tough and rare steel alloy that cannot be destroyed by normal means. Once the alloy is made in its liquid form and allowed to cool, it is too tough to be reshaped and too durable to be melted back down. Powers or devices that manipulate items at the molecular level can alter it—essentially by rewriting reality in that space—but little else can.

Adamantium is tougher than vibranium but less versatile. Because it's nearly impossible to rework once it's been forged, it's difficult to weave into mesh to form flexible armor the way that vibranium is used in Black Panther uniforms.

Despite this, mutants seem to have an affinity for adamantium. Several mutants have had it laced through their bodies—reinforcing their bones or forming retractable blades—but that's likely because they have a Healing Factor that can handle the fact that implanted adamantium is poisonous.

Art by Leinil Francis Yu & Dave McCaig

Michael Syrett (Order - 5319-1700)

When a character is created with the Reinforced Skeleton power and the Healing Factor power, assume that their skeleton is reinforced with adamantium unless specified otherwise. If they lose the Healing Factor, they must make a Challenging Resilience check at the end of each week. If they fail it, they lose 1 point of Resilience. If they reach –4 Resilience, they die.

This loss of Resilience cannot be healed by normal means. However, if the Healing Factor is restored, the character regains the lost Resilience immediately.

Attacks made against adamantium weapons cannot destroy them.

Weapons made of adamantium can ignore 1 level of damage reduction. This applies to characters with adamantium Iconic Weapons who appeared in previous books—like Wolverine (Logan) and Wolverine (Laura Kinney)—and it's the standard in this book and future ones.

Example: *Wolverine (Logan) stabs the Hulk (Bruce Banner). Normally Wolverine's Melee damage multiplier is ×5. However, the Hulk has Sturdy 3, which grants him Health Damage Reduction –3. This would reduce Wolverine's damage multiplier to 2, but his Adamantium-laced claws ignore 1 level of damage reduction, so his attack has a damage multiplier of 3 against the Hulk instead.*

Anti-Telepathy Helmet

With the proliferation of strong telepaths, some people have come up with technological means of preventing anyone from reading or taking over their minds. This is usually embedded within a helmet of some kind.

A person wearing an anti-telepathy helmet cannot use any sort of Telepathy or Telekinesis powers. The helmet also blocks the formation of a Telepathic Link, preventing attackers from using Telepathy powers against the wearer.

This protection works only as long as the helmet is being worn. The moment it is removed, the protection ends.

Magneto and Juggernaut both wear such helmets, and this should be added to their profiles from previous books.

Bo Staff

Gambit uses a bo staff in combat. It has the following stats:

New Weapon

Weapon	Range (Spaces)	Damage Multiplier Bonus
Bo staff	Reach + 1	+1

Cerebro

This amazing room-sized device amplifies the user's telepathic powers and has several functions. To use it, the character must sit in a chair in the center of the sphere-shaped room that houses it and don an interface helmet wired to the larger machine.

To get Cerebro to work, the user must have a power from the Telepathy power set or have a Logic of 2 or higher. If they have neither of these, they can use Cerebro's location abilities, but doing so drains them down to 1 Focus.

Cerebro can locate mutants whose powers have manifested and are functioning. This works as if the character has the Detect Supers: Mutants power, but with a much larger range. It has the accuracy of a standard GPS device, which means it's far from perfect. However, the effective range is the entirety of Earth and the moon, although it cannot reach into different dimensions or alternate universes.

While using Cerebro, a telepath has an edge on all action checks using powers from the Telepathy set and is granted the Copy Psyche power if they don't already have it.

The X-Men often have a limited version of Cerebro installed in a chair in the *Blackbird*, and they have used other portable units as well. These don't grant edges to telepathic powers. Instead, they simply allow the user access to the Detect Supers: Mutants power, with the standard range of 25 miles.

In the Krakoan era, Forge created a helmet-sized version of Cerebro that had all of the normal functions of the larger device, with the exception of the telepathic edges, and Professor X wore it much of the time. In addition, Forge fashioned Cerebro Cradles that could store copied psyches, allowing the Five to draw from them to restore deceased mutants to life in freshly made clone bodies. While the Five mostly made use of the main cradle, there were four other backup units scattered around Krakoa and beyond.

Krakoan Flowers

Krakoa can grow six different kinds of flowers that offer incredible powers. They are:

- **Gateways:** These are grown in pairs that create connected teleportation portals that function much like the Teleportal power. Krakoa's consciousness controls who can access them and who cannot. If someone can control Krakoa, they can control the gateways through it.
- **Habitat:** These grow into self-sustaining biomes that are connected to Krakoa's consciousness.
- **Human Drug I:** This is made into a pill that works as a super-antibiotic. A single dose can eradicate all bacterial infections.
- **Human Drug L:** This is made into pills that can extend the natural human life span by an average of five years, if taken daily.
- **Human Drug M:** This is made into a pill that can cure mental illnesses caused by chemical imbalances in the brain.
- **No-Place:** These flowers produce habitats that are disconnected from Krakoa's consciousness. Moira MacTaggert lived in one of these so that few people would know she was secretly on Krakoa. In this way, these habitats are more like tumors than natural parts of Krakoa's body.

During the fall of Krakoa, Orchis revealed that the human drugs had all been tampered with and had secret genetic triggers that could be used to kill people who took them. They publicly blamed the government of Krakoa for this, although the true blame laid with them and their Director of Human/Resources, Doctor Stasis.

Michael Syrett (Order - 53194700)

Tallus

The Tallus is an amulet—usually worn on a wrist strap—that contains a shard of the M'kraan Crystal. It grants the user the Multiversal Portal power. Using the power requires an Ego vs. TN 10 action check. If the check fails, the Tallus works normally but then stops working. It can be repaired with a Difficult Ego check, which can be attempted once per day.

In some cases, the Tallus seems to have a mind of its own. It can transport characters of its own accord and refuse to take them someplace else until the team solves the problem they were sent to fix. It's up to the Narrator if this happens in any particular case.

In addition, the Tallus can be used to communicate with people in the control room of the extradimensional Crystal Palace, which often serves as the home base of the Exiles.

Initially, it seemed there might be only a single Tallus, but others have turned up as well. They function just like the original.

VEHICLES

The X-Men respond to threats all around the world and beyond. In the Krakoan era, they use Krakoan gateways to teleport to many places instantaneously, but that still limits them to places where the gateway flowers have grown. For more precision, they often rely on mutants like Gateway and Manifold to bring them to exactly where they need to be.

Even so, sometimes mutants with long-range group teleportation powers aren't available. In such cases, the X-Men use top-of-the-line vehicles, often outfitted with Shi'ar technology.

Operating a Vehicle

In most cases, vehicles serve solely as transportation. They pick up people in one place and drop them off in another place.

If there's any question about whether a vehicle can manage a particular turn, maneuver or hazard, the vehicle's operator (driver/pilot) makes an Agility check to see if they can maintain control, and they must do so with their movement action on their turn. If they succeed, all goes as planned.

If they fail, the results are up to the Narrator, depending on the situation. In many cases, a failed Agility check translates to a loss of control, and the operator must spend a reaction (right after losing control) or a standard action (at any other point) to make another Agility check to regain control. This continues until the operator makes the check or the vehicle crashes.

Any aircraft that does not have VTOL (vertical takeoff and landing) capacity cannot engage in standard combat. VTOL craft do not require a runway for taking off or landing and are capable of hovering in place. Helicopters automatically have this, but few traditional planes do.

Vehicular Weaponry

If the vehicle has weapons that the operator can control, the operator can fire them during their turn, using their standard action and their own abilities. Some vehicles have mounted weapons that can be controlled by others, and in such cases the characters controlling those weapons fire on their turns, using their abilities, instead.

Sometimes a vehicle's onboard weaponry is listed as an Elemental Control power, which reflects the kind of damage it can do. The character controlling the weapon must pay any Focus costs to use such powers.

In the case of most other vehicle powers, any Focus costs should be paid by the vehicle's operator. Ignore any prerequisites for these powers.

For other vehicle-mounted weapons, the weapons have a listed range and damage multiplier. Use the Agility of the character making a ranged attack with them, but use the weapon's damage multiplier instead of the character's.

Some vehicles have automated weapons systems. In such cases, these have their own Agility, range and damage multiplier. They can each make a single attack per turn, and they fire simultaneously at the end of the turn.

If a gun is listed as facing in a particular direction—as do many on the *Marauder*—it can aim at targets within a 180-degree arc in that direction. Otherwise, it can fire in any viable direction.

Vehicle Profiles

Vehicles have profiles that list their speed, Health and any powers they have.

Speeds listed for vehicles are combat speeds. Such vehicles can often go much faster in flat-out races, but being involved in combat with characters—who are often on foot—requires them to slow down.

The number listed under Passengers tells how many seats the vehicle has, including the operator's. If there is a cargo bay, others can ride there as well, although they may not have proper restraints (seat belts and the like).

Defense and Destruction

Vehicles use their pilot's Melee and Agility defense scores, as the pilot is in charge of keeping the vehicle and its occupants safe. If the vehicle is unpiloted, the target number for such attacks is 10.

When a vehicle's Health goes below half its maximum, its speed is halved. When its Health falls below 1, the vehicle stops working. Given time, parts and a decent repair shop, a broken vehicle can be repaired. If its Health is reduced to a negative value equal in magnitude to its maximum Health, it is destroyed beyond repair.

If a vehicle stops working (but is not destroyed) while it's moving, the effects can be catastrophic. The pilot must immediately make an Agility vs. TN 14 check to maintain control. If they fail, they no longer have any control over the vehicle and may crash if there is something to crash into. If they succeed, they can continue to steer it. On a Fantastic success, the vehicle rises back up to 1 Health.

A ground or waterborne vehicle that stops working loses half its current speed every turn until it falls below a speed of 1, at which point it stops. A vehicle with brakes can stop faster if the pilot likes.

A winged aircraft can glide at half its regular Flight Speed. However, it also loses altitude equal to half its Glide Speed every turn. A helicopter can do the same thing by diving into autorotation, but it can move at only a quarter of its regular Flight Speed, and it loses the same amount of altitude every turn. If the pilot can find a safe place to land, they can do so. Otherwise, the aircraft crashes.

To determine damage to passengers if a ground vehicle crashes, the Narrator rolls d616 and uses the vehicle's current

Michael Syrett (Order - 5319-1700)

speed divided by 3 (rounded up) as the Damage Multiplier. A worn safety harness (like a seat belt) cuts this in half. Either way, the maximum damage multiplier is ×20.

Example: *Wolverine (Logan) is riding a motorcycle at speed 12 when it crashes. The damage multiplier is (12÷3=) ×4. Motorcycles don't have safety harnesses, so he doesn't get any help from one. The damage reduction from his Reinforced Skeleton power, though, reduces the damage multiplier to ×3.*

Seaborne vehicles don't often have something to crash into, but the same principles apply. They also apply to aircraft that crash, as they line up with the falling rules. Characters that can fly—or otherwise move to safety—can save themselves and others by leaving the aircraft before it crashes.

If the vehicle is destroyed, the damage of the final attack that destroyed it applies to all of its occupants. Each character gets to apply any damage reduction or other protection normally. After that, the vehicle crashes, as above. The pilot cannot make an action check to maintain control, as there's nothing left to control.

Basic Vehicles

Here is a short list of basic vehicles for use in the game. Feel free to modify them to suit your own needs.

Speeds are listed for the vehicle's most common movement mode. These are combat speeds and don't represent flat-out racing speeds.

Basic Vehicles

Vehicle	Speed	Health	Size	Powers
Boat	12	80	Huge	Sturdy 1, Speed Swim

- Features onboard Cerebro tech for locating mutants within 25 miles.

WEAPONS

- **Automated laser batteries:** Agility: 2, Range: 40, Damage Multiplier: x3.
- **Missiles:** Use Elemental Control powers.

PROFILE

There have been several versions of the *Blackbird* over the years. The latest editions have been upgraded with Shi'ar technology, giving them VTOL and cloaking abilities.

When the X-Men have multiple such jets in operation, they sometimes give them different paint jobs and names to differentiate them. This includes the *X-Jet*, the *Dove* (which is white) and the *Thunderbird* (silver, named in honor of the X-Man who gave his life for the team years ago).

The *Blackbird* is built primarily for transport, not as an attack craft. Its weapons are meant for defense, and it often relies on the powers of its passengers to supplement its capabilities.

NEW CONDITIONS

There are three new conditions that can affect characters, along with new rules on how conditions affect characters who have damage reduction.

Damage Reduction

Each level of Health damage reduction protects a character from up to 5 points of Health damage per turn from conditions like ablaze. For example, Sturdy 2 protects a character from up to 10 points of Health damage from conditions per turn. Any damage over and above that protection affects the character normally.

Damage from various kinds of conditions does add up, but only from different conditions. If a character is ablaze, for instance, they take 5 points of damage at the end of their turn. They cannot be *more* ablaze, even if they're set on fire by several things at the same time.

However, if the character also suffers from another condition that causes 5 points of damage at the end of their turn—like corroding (see below)—they take a total of 10 points of damage at the end of their turn. If they have Sturdy 1, that protects them from 5 points of damage per turn, but the remaining 5 points get through.

If there is doubt as to what kinds of damage a character might suffer from or be immune to, the Narrator chooses how to allocate such damage.

Corroding

If a character is affected by corrosive chemicals—like burning acids—they are corroding. A corroding character loses 5 Health at the end of each of their turns until they die or the condition ends. Being washed with copious amounts of water can remove the corrosive chemical.

Infected

The character has been infected with a disease of some sort.

To be infected, the target of an airborne infection must be within 3 spaces of the source of the infection and breathe air that the source can affect. If the infection is passed by contact, a close attack that does at least 1 point of damage is required.

Either way, once exposed, the target must immediately make a Resilience check (which does not cost an action) against the infection's target number. Unless otherwise stated, the standard is TN 12, but it can vary with the virulence of the infection. A Fantastic success on resisting an infection gives the target immunity to that disease for a full day. Otherwise, the source may affect the target again on the next turn.

If the target does not breathe (or does not have to breathe), it cannot be infected by an airborne infection. To hold their breath to avoid infection, a character must use a standard action or reaction. At the start of each of their turns thereafter, they must make a Resilience vs. TN 10 check to continue effectively holding their breath.

The effects and the timing of the incubation of the infection vary with the disease, as do any cures and duration. A common cold, for instance, doesn't affect the character until the next day, and then it gives them trouble on all actions. After a good night's rest, the character makes a Resilience vs. TN 12 action check. If they succeed, they are cured. If they fail, subtract 1 from the TN each day thereafter.

While suffering from the disease, the target can infect others in the same way that it was originally infected.

Poisoned

If a character is poisoned, they must make a Resilience vs. TN 18 action check at the start of each of their turns. (This does not cost an action.) If they fail, they lose 1 Health. If they succeed, they are fine that turn. A Fantastic success means the poison has passed from their system and no longer affects them.

Many poisons have an antidote. Others do not, but they may be cured or removed by certain powers.

If the poison was ingested, for instance, swallowing activated charcoal can neutralize it. Most emergency medical facilities have supplies of this on hand. Such places often also have antivenom to help with injected venoms or poisons. Many super-hero teams have stocks of both at their headquarters.

Most characters with the Healing Factor power can effectively ignore poisons, as their power can replace the lost Health point.

If a poison has not killed a character within 24 hours, their system eliminates it.

MENTAL DUELS

While the standard rules using mental powers in combat work well in most circumstances—like in the middle of a standard battle—sometimes two telepaths take each other on in a mental duel. When that happens, use the following rules to make their portion of the battle feel more epic.

These rules are meant for one-on-one fights, but they take place as part of the normal sequence of play during combat. They can be extended to cover wider conflicts if desired.

Requirements

To engage in a mental duel, the combatants must be linked by a telepathic connection of some sort. This can be forged by the Telepathic Link power, the Telepathic Network power or some other means.

The distance between the duelists does not matter. Telepathy transmits at the speed of thought, faster than even that of light.

Initiating the mental duel usually requires the consent of all participants. However, it's possible for a telepath to compel a foe into a mental duel by forcing a link with them, using the normal rules for the Telepathic Link power with a slight modification. The character makes a Logic check against the target's Vigilance defense *with trouble.* On a failure, the character cannot attempt to link with the target in this way for the rest of the day. On a success, the character is linked with the target for one round, during which the duel begins. On a Fantastic success, the target cannot break the telepathic link for the rest of the day.

Commitment

The participants in a mental duel are said to be *committed.* They have set themselves fully to this fight, and they must put everything they have into the battle.

Michael Syrett (Order - 53194700)

This means leaving their bodies behind and entering a private mindscape in the Astral Plane. During the duel, they cannot perceive anything happening around them in the real world, as all of their attention is focused on triumphing—or at least surviving—the mental duel.

For this reason, most mental duelists prefer to enter a duel from a safe location, if possible, a place where they don't have to worry about their physical form. They are extremely vulnerable to physical attacks in such a state and cannot protect themselves.

To that end, some duelists have trusted friends or associates protect them while they take part in a mental duel. Others lock themselves away in their homes or—better yet—a safe room where no one can reach them.

That's not to say that a mental duelist is entirely helpless against a physical attack. They just have to be jarred out of the duel hard enough to return to their regular senses.

If a character engaged in a mental duel takes Health damage at any point, this can break them out of their commitment to the duel. When this happens, they must make a Vigilance check to remain in the duel. The target number for the check is the amount of Health damage done to them.

If the character fails the Vigilance check, they are forcibly disengaged from the mental duel. Any foes who wish to can make one last attack against them as a reaction.

Example: *Jean Grey is in a mental duel with Madelyne Pryor. During this duel, Havok shoots Grey with an energy blast, doing 12 points of damage. To remain in the mental duel, Grey must make a Vigilance check against a target number of 12. If she fails, the duel comes to an end.*

The Battlefield

A mental duel takes place in a mental space automatically constructed by the minds of the participants. This is formed in the Astral Plane as part of the telepathic link that connects them. Each participant can declare what their side of the battlefield looks like, and these mentally constructed areas often reflect the character's personality and history.

This can include a new costume, look or form for each participant. If they see themselves as serving a noble purpose, for instance, they might appear as a knight in shining armor.

Art by Jim Cheung, Mark Morales, Guillermo Ortego, Walden Wong, Richard Isanove & Rain Beredo

Michael Syrett (Order - 5319-1700)

If they are more relaxed and self-assured, they might instead show up in casual clothes on a beach.

However, many participants don't concern themselves with such decorations, or they keep their side disconcertingly abstract. In such cases, the duelists often find themselves standing on an infinite plane of smooth, featureless ground stretching out beneath a starless sky.

As the fight rages on, the nature of the battlefield often changes to represent who has the upper hand at the time. If one combatant is winning, their side of the battlefield seems to loom over the other, threatening to swallow it whole.

When one side wins, that's exactly what happens. The winner's mindscape dominates the battlefield completely, forcing the other's to disappear.

In the case of a telepathic network, there may be more than two combatants. If so, each person taking part forms a proportional part of the battlefield.

Those who do not take part in the battle but simply bear witness do not affect the battlefield at all. If they appear, it is only as ghostly forms, or perhaps as only disembodied heads or eyes.

The Duel

Once the duel has begun, the combatants use their regular telepathic powers to fight each other until one of them either gives up or is demoralized by losing all of their Focus.

Ranges mean nothing in such a space. However, most powers do not function well in a mental duel, as they are meant to work in physical spaces, and the mental battlefield doesn't accommodate them.

The following powers work normally while on the mental battlefield.

- Mental Shelter
- Mind Interrogation
- Mind Reading
- Telepathic Blast
- Uncanny 1–4

Mental Shelter has an effect only if there are allies involved in the battle whom the character wants to protect or affect. Mind Reading and Mind Interrogation have no direct effect on a foe, but it may be that the duel is just an excuse for a character to delve into the mind of another without them being aware of it.

The following telepathic powers do not work at all, as they depend on tricking an observer's mind. Because the mental battlefield takes place inside the combatants' shared telepathic link, such deceptions are impossible.

- Cloak
- Cloak Group
- Fool
- Grand Fool
- Grand Mirage
- Mirage

Mental Punch also does not work, as there is no way to engage in actual close combat in the mental battlefield.

All characters in a mental duel can use the Telepathic Blast power, even if they don't normally have it or meet the prerequisites. Many mental duels come down to the combatants trading Telepathic Blasts—as if in a psychic boxing match—until only one side is left standing.

Disengaging

A combatant in a mental duel might want to leave the battlefield before the duel is over. To disengage, they must use a standard action to make a Vigilance check and compare that against each opponent's Vigilance defense. If they succeed against all of their opponents, they can disengage. Otherwise, they must remain in the duel until at least the next round, when they can try to disengage again.

When a character disengages, any foes who wish to can make one last attack against them as a reaction.

Alternatively, a combatant can ask to concede the duel. If they do, honorable opponents usually let them leave the mental battlefield without any further attacks.

The Aftermath

When a character wins a mental duel, their side of the battlefield grows until it dominates the entire thing. This symbolizes their victory.

If a character is demoralized during a mental duel, they lose. The victors can then allow the demoralized character to concede and exit the duel.

However, a victor could instead take advantage of their foe's vulnerability and use other telepathic powers against them while they are weakened. This can include using the following powers:

- Command
- Domination
- Edit Memory
- Memory Blip
- Orders
- Telepathic Possession

The victor has an edge on any attempt to use such powers against defeated foes.

Defeated characters can attempt to disengage from the mental battlefield at the start of each of their turns, just like normal.

THE DANGER ROOM

The Danger Room is a staple of many X-Men stories. It's a large training room that produces obstacles and challenges for the heroes to overcome, preparing them to face foes in combat, especially as a team.

The original Danger Room featured all sorts of mechanical tricks and traps, but over the years, the X-Men upgraded it with Shi'ar technology that combines holographic illusions with hard-light substrates to make elements in the room look and feel incredibly real. This can transform the room to make it appear as if its occupants are anywhere in an infinitely large space.

The Danger Room has been destroyed several times over the years, but the X-Men always rebuild it. In fact, when they set up a new headquarters, they often install a new Danger Room. Training to function well as a team has always been one of their core values.

Michael Syrett (Order: 53194700)

The Computer

The Danger Room uses a complex computer and Shi'ar technology to create its challenges for the occupants. It takes a lot of computing power to make sure that everything goes smoothly and no one is maimed or even killed in the process.

The Danger Room computer is powerful but is restricted from advancing enough to become artificially intelligent. Even so, at one point a Danger Room computer awakened as an A.I. and created a body for itself, becoming an autonomous android called Danger.

Despite that incident, the X-Men continue to use Shi'ar technology in their Danger Rooms, although with heightened attention to detail. They don't want another such being to accidentally arise from another Danger Room if they can help it.

Using the Danger Room

When using the Danger Room, there are several factors that can be adjusted: danger level, setting and battle mode.

Danger Level: The room can be set at various levels of danger. These correspond directly with the six ranks a character can have: 1 through 6. Level 1 is the easiest, while level 6 is the most dangerous.

Setting: The room can be set to emulate an amazing number of environments and even to replicate situations from some of the X-Men's greatest battles. This option can be turned off so the occupants focus entirely on the direct dangers instead.

Michael Syrett (Order - 5319-1700)

Battle Mode: The room can be used to simulate all sorts of challenges, but there are two main ones for random training exercises. They are known as Victory (the occupants must beat a certain number of challenges or achieve a certain goal) and Endless (the occupants train until they are defeated, looking to set a high score).

Designing Danger

Narrators can, if they like, design entire scenarios to take place inside the Danger Room. The group could literally play a game inside the game.

For instance, the heroes could explore a fantasy dungeon and face off against a dragon in the final battle. Or they could use the Danger Room as a massive flight simulator and take part in starfighter dogfights in outer space.

Alternatively, the Narrator can incorporate the Danger Room into any adventure, making it a key part of the action. Possibilities include:

- **Regular Training:** See the Getting Schooled section on page 132.
- **Real Danger:** The room's computer has been hacked, disabling the restrictions against using lethal challenges.
- **Trapped:** Someone is trapped inside the Danger Room and must be rescued. The heroes can break into the room and help the trapped person face the challenges, or they can coach them through the challenges via telepathic or electronic communication.
- **Keep Busy:** The heroes must get someone inside the Danger Room and keep them busy there until the heroes can escape, find help or formulate another plan to deal with their prisoner.
- **Escape Room:** The characters are slipped into the Danger Room without realizing it (perhaps while they were unconscious) and must figure out what's going on so they can escape.

Most of the time when someone is inside the Danger Room, they know it and willingly go along with the illusions it generates. If a character is unaware of the nature of the room, they can attempt to see through the illusions, similar to how they would with one generated by the Illusion power set. This requires a Logic vs. TN 16 action check. If the check succeeds, the character sees through the illusion. If they communicate this to others, those characters get an edge on any Logic check to see through the illusion as well. On a Fantastic success on any such Logic check, the character can see fully through the illusions, although they end only when the Danger Room—or whoever is controlling it at the time—shuts them off.

Random Danger

The Narrator can use the following tables to randomly generate a series of obstacles for characters in the Danger Room.

The first thing to determine is the danger level. The Danger Room is smart enough to tailor the experience to each individual character in the room. The default is that every obstacle a character faces has a Challenging target number based on their rank.

Challenging TN by Rank

Rank	Challenging TN
1	11
2	12
3	13
4	14
5	15
6	16

Example: *Cyclops is Rank 4. The TN for any obstacle he encounters should be 14.*

The Narrator can adjust the difficulty of the obstacle by using the TN Modifiers by Adjective table.

TN Modifiers by Adjectives

Adjective	TN Modifier
Trivial	–6
Easy	–4
Routine	–2
Challenging	—
Difficult	+2
Ridiculous	+4
Absurd	+6

Example: *Cyclops wants to really test himself today. He asks the Danger Room to give him a Difficult training session. This increases the TN for all obstacles by +2. This means the TNs should be (14+2=) 16.*

Battle Mode

The two main battle modes are Victory and Endless.

Victory: The characters must overcome a set number of dangers. This is usually equal to the number of characters in the training times the rank of the highest-ranked character. For example, if there are four characters and the highest rank among them is 3, they need to overcome a total of twelve dangers. For extended challenges, the victory conditions can be doubled or even tripled.

Endless: In this mode, the characters keep battling against dangers until they are all unconscious or demoralized. Keep track of the number of dangers they overcome, both individually and as a group. The Danger Room maintains a leaderboard for their efforts.

Random Setting

The next thing to determine is the Danger Room's setting. By default, the chamber is simply an empty room that the characters move around in, much like a high-tech gymnasium. However, the participants can request any setting they like. For something random, roll on the following table.

Michael Syrett (Order - 53194700)

Random Danger Room Setting

Roll	Setting
1	The Arena, Krakoa
2	Central Park, New York City
3	Lowtown, Madripoor
4	Circle Perilous, Arakko
5	Utopia
6	Genosha/Necrosha*

* If the TN for this setting is Challenging or below, it happens in Genosha. If the TN is Difficult or above, it happens in Necrosha instead.

Random Threats

Once the Narrator knows the danger level, the battle mode and the setting, they can generate challenges for any occupants on the fly. At the start of the session, roll on the Random Danger Room Threats table once for each character in the room and record the results.

At the start of each round, roll a new danger for each character. Continue this until the training session is over or all of the occupants are defeated. A character is defeated if they become unconscious or demoralized.

For all attacks made by the Danger Room, use the current danger level as the attack's rank and ability score.

Example: *The Danger Room's danger level is 4. When it fires a missile at a character inside it, make an action check and add 4 to the d616 roll, as if that was the Danger Room's Agility score. If the missile hits, it does dM×4 + 4 points of damage.*

Random Danger Room Threats

Roll	Danger
1	Missile attack
2	Hydraulic press
3	Tangling net
4	Close attack
5	Ranged attack
6	Environment change

Missile Attack: A missile fires at the character. They can use an action to dodge the Agility attack. Roll an attack against the character's Agility defense, with trouble if they dodge. Alternatively, they can use the skulk reaction to hide behind someone else.

Hydraulic Press: A steel platform slams out from a wall, floor or ceiling to try to crush the character. They can use an action to dodge the close attack. Roll an attack against the character's Melee defense, with trouble if they dodge.

Alternatively, the character can use a reaction to try to catch the platform and stop it in its tracks with brute force. This requires them to make a non-combat Melee check against a TN of 12 + the current danger level. If they succeed, they take no damage from the attack.

Tangling Net: A net fires out at the character. They can use an action to dodge the Agility attack. Roll an attack against the character's Agility defense, with trouble if they dodge. If the attack is a success, the character is not damaged but is grabbed. If the attack is a Fantastic success, the character is pinned as well.

Close Attack: A holographic minion appears next to the character to make a close combat attack against them. It has a Health of 10 times the current danger level and a Run Speed of 5, and it persists until knocked unconscious.

Ranged Attack: A holographic minion appears 10 spaces away to make a ranged attack against the character. It has a Health of 10 times the current danger level and a Run Speed of 5, and it persists until knocked unconscious.

Environment Change: Roll on the appropriate Random Danger Room Environment table. If this happens for more than one character in a turn, only the last result has an effect.

Random Danger Room Environment (Modern)

Roll	Danger
1	Standard (no effect).
2	***Foggy.*** Blocks sight beyond 10 spaces.
3	***Storming.*** Ranges and speeds cut in half.
4	***Windy.*** Ranged attacks have trouble, and characters cannot fly or swingline.
5	***Kaleidoscopic flashing.*** All Focus costs for powers are doubled.
6	***Lights out.*** Characters are blinded, but the Danger Room is not.

Random Danger Room Environment (Classic)

Roll	Danger
1	Standard (no effect).
2	***Roof lowers.*** Characters cannot fly.
3	***Walls close in.*** Close attacks have trouble in such tight quarters.
4	***Giant fan blows.*** Ranged attacks have trouble.
5	***Sonic disruption.*** All Focus costs for powers are doubled.
6	***Lights out.*** Characters are blinded, but the Danger Room is not.

MUTANT GROWTH HORMONE

Mutant Growth Hormone—often abbreviated as MGH—is a chemical found naturally in all mutants. Once extracted and refined, it can be injected into regular humans to give them superhuman powers. People who already have super-powers can use it to enhance their existing powers instead.

The powers granted by any particular dose of Mutant Growth Hormone seem to depend on which mutant the drug was harvested from, but doses are sometimes blended, making the effects more random.

Although the drug is called *Mutant* Growth Hormone, it can actually be harvested from any super-powered person whose powers arise from genetic alteration of any kind. For example, there is a variant of the drug called Inhuman Growth Hormone, which is derived from Inhumans rather than mutants.

Creation

Mutant Growth Hormone is usually sourced from mutants with active powers, typically taken from their blood. This blood can be donated voluntarily, but it is sometimes taken without the donor's consent.

Scientists have attempted to synthesize MGH, but no one has yet developed a permanent and stable process for creating it. That hasn't kept them from trying, though, often by exploiting mutants for their blood and tissue.

Dosage

Mutant Growth Hormone is available in many forms. It's often sold as a tablet or capsule, but it can be injected as well. It's also been atomized into a gas that can be administered to an entire group of people at once, whether they want it or not.

Each dose of MGH lasts for one day. When it is administered to a character, the character goes up 1 rank. This grants them 5 ability points and four powers, and it bumps them +1 in their damage multipliers. If they have the Heroic tag, they gain +1 Karma.

Instead of picking a new trait, the character gains the Berserker trait. If they already have Berserker, they do not gain a different trait. Instead, they have trouble on any Ego check made for the Berserker trait.

Some forms of Mutant Growth Hormone come with a specific set of powers and ability gains. These usually reflect the powers of the mutant from which the drug was harvested.

In most cases, though, the MGH has been refined and blended to react differently depending on the genetics of the person to whom it's given. Unless the character knows where the drug came from, the Narrator should spend the ability points and power picks for a dose and inform the player what happens to the character. Any further doses from the same source should have an identical effect.

Side Effects

Mutant Growth Hormone causes heightened aggression in those who take it. This is represented by the Berserker trait.

All gains from a dose of MGH disappear after 24 hours. The character simply reverts to their normal state.

However, the drug can become addictive for those who take it regularly. This addiction seems to be more psychological than physical. When a character takes a dose of Mutant Growth Hormone, they must make a Resilience check against a TN of 5 plus the number of consecutive days they've taken it. With a failed check, the character becomes addicted.

Art by Kevin Nowlan

MUTANT GROWTH HORMONE

If a character is addicted and goes more than 24 hours without taking a dose, they enter withdrawal. They have trouble on all actions until they take another dose of MGH or their withdrawal period ends.

Every full day an addicted character goes without the drug, they can make a Resilience check against a TN of 15 minus the number of days they've been without it. When they succeed, their addiction ends.

Legal Issues

Mutant Growth Hormone is illegal in the United States and most other nations. This includes not only the possession and use of the drug but the manufacturing, distribution and sale of it. The penalties vary from place to place, but they are serious and often involve extended time in prison.

ANTI-MUTANT "CURES"

Because of anti-mutant hysteria, several organizations have worked to come up with supposed cures for the X-Gene. In other cases, diseases have spread that can cost mutants their powers or even their lives. On top of that, the Scarlet Witch once depowered nearly all of the world's mutants.

Losing Powers

When a mutant loses their X-Gene–based powers, they lose their Mutant origin and all the tags that came with it. If they have another origin, they can have access to powers permitted by that origin. Otherwise, their origin switches to Special Training instead.

Michael Syrett (Order - 53194700)

If their only origin is Special Training, they lose all powers that aren't from the following power sets:

- Martial Arts
- Melee Weapons
- Ranged Weapons
- Shield Bearer
- Tactics

In addition, they can only have Basic powers that a regular human could reasonably have.

Depowered mutants are sometimes referred to as Pans or Rems. Pans stands for "Pass As Normal." In other words, they appear to be entirely human. Rems, on the other hand, retain remnants of their former powers—horns, tails, wildly colored skin or hair and so on—that mark them as not fully human.

Regaining Powers

While it's hard to lose powers, it can be even more difficult to regain them. Some depowered mutants give up on recovering their original powers and search for a new source of powers instead.

If a character does this, their player should pick a new origin and new powers for them. These can be the same as the original set of powers, but they don't have to be. On top of this, they should come up with a rationale for how the character managed it.

For example, a depowered mutant might pick the High Tech: Battle Suit origin and wind up with a suit of armor that gives them the same powers they had before. The main difference is that those powers now have the Tech Reliance trait.

Other ways mutants have regained their powers include:

- Being thrown into and rescued from the M'kraan Crystal (Professor X)
- Receiving a blood transfusion from Apocalypse (Chamber)
- Using knowledge gained by dissecting the brain of the Dreaming Celestial to power a machine designed with the High Evolutionary (Magneto)
- Having the Scarlet Witch use the Life Force to personally (and painfully) reverse the effect of her own spell for one mutant (Rictor)
- Becoming a Horseman of Apocalypse (Polaris)
- Dying and then being resurrected on Krakoa by the Five

If an ex-mutant regains their Mutant origin, the character returns to how they were before, with all their powers restored to their former status.

Decimation

Years back, the Scarlet Witch had a mental breakdown and altered the world so that her supposed father, Magneto, had triumphed and ruled the planet with a team of mutants. When she realized what had happened, she restored reality to the way it had been before, with one major exception: no more mutants. In practice, mutants remained, but only about 200 of the nearly one million mutants there had been before.

Unless the game takes place during the time of the Decimation, the characters are unlikely to lose their powers in this way, but it's possible that something similar could happen.

After the Decimation, Hope Summers and the Phoenix Force managed to restart mutant births as well as the ability of latent mutants to gain their power for the first time. This didn't restore powers to those who had lost them, though.

Hope Serum

In the aftermath of the Legacy virus plague, Dr. Kavita Rao—who had been working on a cure for the virus—developed the Hope Serum, an injectable cure for mutantism. A single shot of this medication permanently removes any powers granted by the X-Gene.

Another form of the Hope Serum was turned into a pill that must be taken twice daily to maintain its effects. Otherwise, the effects wear off after eighteen hours, allowing the character's powers to return.

Legacy Virus

The Legacy virus was a manufactured virus that Stryfe tricked Mister Sinister into inflicting upon the world. Rather than depowering mutants, it killed them. At the time the original strain was ripping through the population, there was no known cure, and the disease was invariably fatal, although it sometimes took a while to progress to that stage.

In some cases, those who contracted the Legacy virus lost control of their powers as they met their end. Sometimes their unleashed powers killed bystanders as well.

With the help of Mystique, the virus evolved so that it would kill regular humans too. Beast eventually developed a cure, but Colossus had to sacrifice his life to disperse it widely and quickly.

X-Cise

X-Cise is a single-dose pill that doesn't remove the X-Gene from a mutant. Instead, it burns out the part of the brain that allows the mutant to use their powers. Unfortunately, it also causes brain damage.

A character taking X-Cise has their Vigilance reduced to 0, and they lose access to all powers with a duration that isn't permanent. The only exceptions are powers that a character with the Special Training origin can have.

Those who take X-Cise can make a Vigilance vs. TN 12 check at the end of each month. On a success, they regain a lost point of Vigilance. On a Fantastic success, they regain their lost powers too. Once they regain all their lost Vigilance, they can no longer make any such checks.

Those who have the Healing Factor power—which is a latent power that doesn't require conscious activation—recover 1 lost point of Vigilance per day. At the point they are fully recovered, they regain access to all their powers as well.

INFECTIONS AND POSSESSIONS

Throughout the adventures the X-Men and other mutants have had, they are sometimes taken over by powerful forces that they cannot control. Sometimes these forces attack their bodies, but other times, they affect their minds—or both.

Each of these events can be the basis of an entire adventure (or more) and should be handled carefully. This section includes guidelines for each instance.

Brood Implantation

The alien race known as the Brood reproduces by implanting with their embryos in other species. Once an embryo is implanted within a host, it grows until it is ready to mature, at which point it transforms the host's body into that of a Brood. The Brood inherits any mutant powers the host has.

While the embryo is maturing, it can mentally take over the host's body and control it. To do so, it must make a Resilience check against the host's Resilience defense. The embryo's Resilience is 0, so it often waits until the host is asleep to make this attempt, at which time the embryo gains an edge on the check. If the check fails, nothing happens, but if it succeeds, the embryo takes control of the host's body for one hour. The embryo can try to maintain control after that hour with another Resilience check. If it fails, the host awakens wherever they happen to be.

While the embryo is in control, it often works to isolate the host from those who might help them. This can include attacking the host's family and friends, although often in secretive ways so that no one would suspect the host.

The host remembers nothing of what happens when the embryo controls the body, which is another reason it often attempts to take control while the host sleeps. Most people would not be concerned about not remembering things that happened while they were asleep.

The Narrator should give the characters clues as to what is going on. Perhaps the embryo uses the host's powers in ways that give away the host's involvement. Or maybe the embryo doesn't know about cameras or other security measures that might detect, stop or even capture it.

The host might also suspect that something is up when they awaken without feeling rested. They don't recover Health or Focus while the embryo is in control, and this may be a giveaway, especially if they awaken with injuries they didn't have when they went to sleep.

Once a host is implanted with an embryo, there are few known cures for the condition for most people that don't also involve the death of the host. However, characters with the Healing Factor power can eliminate the embryo. A host with that power can attempt this after an embryo fails a Resilience check to take over their body. The host can then make a Resilience check of their own. On a success, the host can have the embryo removed from their body, either by themself or someone else. Have the remover make a close attack vs. TN 10 and apply damage normally. The attack must do at least 1 point of damage for the embryo to be removed.

Art by Pepe Larraz & Marte Gracia

Michael Syrett (Order - 5319-1700)

Strong magic can also eliminate a Brood embryo by use of the Exorcism power, which kills the embryo and removes it from the host's body.

The length of time it takes for an embryo to mature can vary, but it's usually three to seven days. Once the Brood matures, the infected person effectively is killed. In some rare cases, the Brood's body retains the original host's personality and can switch over to it when it wishes.

Brood are a hive species, controlled by the ruler of their hive, often known as a Brood Queen. The Empress Brood rules over all of the queens and, by extension, all of the Brood. Only Brood Queens (including the Empress) can implant an embryo in a host. Embryos are part of the hive from the moment of their implantation. They are connected to the hive by the Brood Queen's Telepathic Network power and can draw on the hive's intelligence when controlling their host's body.

The Horsemen

Over the many centuries of his life, Apocalypse has corrupted and promoted other mutants to become his Horsemen. By tradition, he has four of them, named Death, Famine, Pestilence and War. The First Horsemen were the children of Apocalypse and his wife Genesis, but when they were trapped in Amenth, he took steps to replace them with other mutants.

To convert a character into a Horseman, Apocalypse must first capture them. He then uses a Celestial Seed to try to brainwash them, making an Ego check with trouble against their Ego defense. If he fails, he can try again the next day, continuing each day until he either succeeds or admits defeat.

When a character is made into a Horseman, the following things happen:

- They immediately gain a rank, unless they are already Rank 6. They should pick any new powers from their existing power sets.
- They lose the Heroic tag, if they have it, and gain the Villainous tag.
- They are under the influence of Apocalypse and follow his orders. This may mean that the Narrator needs to take control of the character, but the player can keep playing the character if they go along with the Narrator's directions.

If the character is forced to commit an act that they would consider morally repugnant, they get to make a Challenging Ego check. If they fail, they commit the act. If they succeed, they break free of Apocalypse's influence. Within the next day, they lose the rank they gained and any powers and other benefits that came with it.

There are separate kinds of Celestial Seeds for each type of Horseman. A Death Seed creates a Horseman of Death, and so on. When one is successfully used on a character, it creates an entirely new persona for them, one based on a combination of their original personality and the nature of the seed. If the character manages to throw off Apocalypse's influence, that persona disappears.

Mister Sinister

During the Krakoan era, the resurrection of mutants depended on DNA data supplied by Mister Sinister. He, of course, manipulated that DNA to his own benefit whenever possible. In many cases, he mixed part of his own DNA with those of the resurrected mutants, giving him the ability to mentally control them.

This might have happened to any mutant who was resurrected on Krakoa. At any point, Mister Sinister might be able to exert control over them, forcing them to do things against their will and then perhaps erasing their memories of those actions.

Forge supposedly eliminated this influence over any mutants resurrected on Krakoa. However, Mister Sinister still managed to maintain it over Professor Xavier, as he had first implanted such controls when Xavier was young, long before the advent of Krakoa.

If Mister Sinister has influence over a character, he can exert it by making an Ego check against the character's Ego defense. If he fails, the character might not even know anything happened. If he succeeds, he can get the character to act as he likes for the next hour. He can then use his Memory Blip power to remove any memories of what they did.

If Mister Sinister's influence is detected, a genius with expertise dealing with mutant DNA (like Forge) or someone with the DNA Manipulation power (like Cassandra Nova) should be able to restore the altered DNA to its original state. However, the influenced character would have to trust that the erasure actually happened.

The Phoenix Force

The Phoenix Force is an immortal that came from the Sixth Cosmos—or possibly even earlier—and it represents the primal force of life itself in the universe, in all its amazing glory, with the power to both create and destroy. To experience life as a tangible creature, it bonds with super-powered people—usually telepaths—and boosts their powers to unimaginable levels.

The Phoenix Force is selective about the people it bonds with. It prefers to attach itself to telepaths, like Jean Grey, Madelyne Pryor, Kid Omega and the Stepford Cuckoos. However, it has been known to bond with other kinds of super-powered people when injured and desperate. This has included the mutants Colossus, Cyclops, Magik and Namor, as well as the Inhuman known as Thane. It even once answered Moon Knight's prayers to help him stand against the god Khonshu.

Recently the Phoenix Force held a contest to see who it should bond with next, and Echo won, becoming its host. While it had often chosen powerful telepaths in the past, this time it was impressed with the innovative ways Echo used its powers, tipping the balance in her favor.

Echo later exhausted the immortal's power while helping the Avengers defend the Multiverse in the God Quarry. The Phoenix Force has not been seen since, but there is little doubt it will return, perhaps in the form of a Phoenix Egg.

Once the Phoenix Force establishes a bond—as it did with Jean Grey, for instance—it often returns to such hosts again and again throughout their lifetimes. When a character bonds with the Phoenix Force, the following things happen:

- They gain the Berserker trait for free.
- They immediately become Rank 6, if they are not already.

Michael Syrett (Order - 53194700)

- Any new power picks granted by an upgrade in rank must first go to Flight 2 and Environmental Protection, if they don't already have those powers. After that, their next five power picks must be from the Elemental Control (Fire) power set. Any remaining picks can be from their current power sets as well.
- If the character is already Rank 6, they gain five power picks. These must first go to Flight 2 and Environmental Protection, if they don't already have those powers. Any remaining picks must come from the Elemental Control (Fire) power set.

As long as the character sticks to using the powers this change grants them, they remain stable. However, anytime they wish, they can access the full power of the Phoenix Force and use it to effectively do anything they can imagine, including destroying entire stars and rewriting reality at a basic level.

The moment a character takes advantage of such incredible power—unless their motives are entirely selfless—the Phoenix Force transforms them into the Dark Phoenix. When this happens, they become Rank X, and the Narrator takes control of them. They can enter this transformation willingly or be tricked into doing so, much as Mastermind manipulated Jean Grey into becoming the Black Queen of the Hellfire Club and eventually becoming the Dark Phoenix.

The most common way for a character to rid themselves of the Dark Phoenix power is to die. Anytime the character is compelled to do something that would horrify them, they can make an Ego vs. TN 20 check. If they fail, the Phoenix Force maintains its control of them. If they succeed, they regain control of themselves momentarily and can try to arrange for their death, which frees them from being the host. On a Fantastic success, they regain full control of themselves—at least until they succumb to the temptation to become the Dark Phoenix again. However, the character still has to deal with the ramifications of things they did while they were possessed.

If the character's motives are selfless, the Phoenix Force allows them to consume all of its power to achieve their goals. Once the character's mission is complete, it leaves them and enters a period of rebirth, eventually returning in the form of a Phoenix Egg.

At times, the Phoenix Force has been shattered or has even split itself up intentionally. Those who bond with a substantial fragment of the Phoenix Force can gain its regular powers, although without the option to access Rank X power. If such a character defeats another character bonded with a fragment, they can absorb the defeated character's fragment. Once all fragments are absorbed, the Phoenix Force is made whole, and the character has access to Rank X power as described above.

Alternatively, if a character with a fragment of the Phoenix Force wishes to use its Rank X power for an altruistic act, they can do so, but this consumes the fragment.

Transmode Virus

The alien race known as the Phalanx uses the Transmode virus to infect living tissue and transform it into technological material—nanobots that can morph into any shape—so they can absorb it into their culture. Those who succumb to the virus are brought under the control of the Phalanx's artificial-intelligence group mind.

Creatures infected with the Transmode virus gain the following powers for free:

- Healing Factor
- Shape-Shift (for infected parts)
- Understand Code

Each day a victim is infected with the virus, they must make a Resilience vs. TN 12 action check. If they succeed, the virus lies dormant inside them. If they fail, a limb becomes infected. On their next failed check, the rest of them becomes infected, except for their head. If they fail a third check, the virus takes them over completely.

Transformed parts of the victim's flesh become yellow and black. This progresses until the entire creature is transformed. At that point, the victim is absorbed into the Phalanx, and the Narrator takes control of the character. Alternatively, the player can keep playing the character if they go along with the Narrator's directions.

The Cure-All power does not affect the Transmode virus. Other methods may work, at the Narrator's discretion, although a cure is beyond the scope of standard medical science.

A Technarch can drain the energy of a fully infected Transmode victim, leaving only their lifeless, transformed body behind. This is usually done to creatures or cultures considered unfit to join the Phalanx, keeping such beings from polluting the alien race.

Two well-known mutants have been infected with a particularly nasty variant of the Transmode virus (known as the Techno-Organic virus) and survived: Apocalypse and Cable. Mister Sinister created this variant in an attempt to kill Apocalypse, whom he served at the time.

Apocalypse infected the infant Nathan Summers with the Techno-Organic virus, causing his parents to send him into the future in search of treatment—during which time he became known as Cable. While his infection was not cured, he was trained to use his telekinesis to keep the virus from progressing further than his right arm. Characters of Rank 4 or higher who have the Telekinetic Manipulation power can do the same, although they cannot use this power for any other purpose while it keeps the disease from progressing.

NEW ORIGINS

This section presents several new origins, all of which are subsets of origins in the *Core Rulebook*. They cover three kinds of aliens (the Brood, Marginalians and Technarchs), a strange sort of monster (Mummudrai) and two types of mutants (Artificials and Externals).

If a new origin seems more appropriate for an existing character than the origin they already have, it's all right to change it. Just remember to remove the elements (like traits, tags and so on) from the old origin and replace them with the elements from the new origin.

The standard Mutant origin also gets a slight modification here. It used to come with instant Krakoan citizenship and all the benefits that entailed. Given that adventures may be set in various parts of Marvel history, this isn't always appropriate, so Krakoan is now just a suggested tag. That entry also features another suggestion: Arakkii, which works best for mutants who come from Arakko, whether in the present

Michael Syrett (Order - 5319-1700)

or when Arakko was located in Amenth (a ravaged world in another dimension that can be reached via Otherworld).

Note that powers that are granted by an origin do count against the total number of powers a character is allowed. Unless otherwise restricted, the character can add other powers up to their regular allotment.

Alien: Brood

The character is a member of the Brood, one of the most feared alien species in the galaxy. The Brood are insectoid creatures overseen by Brood Queens who all serve the Empress Brood. The Empress rules the entire Brood population through a hive mind that extends across the universe.

Only Brood Queens (including the Empress) can implant a Brood embryo in creatures from other species, which is how the Brood reproduce. Queens prefer to implant embryos in an unconscious host to prevent the host from knowing about it. They often poison the host with their tail stinger and wait for them to fall before implanting the embryo, which neutralizes the poison.

If a character is fully taken over by a Brood embryo implanted in them, they automatically gain this origin, along with the Extraordinary Origin trait.

Examples: Broo, Brood Drone, Brood Queen, Empress Brood.
Tags: Alien Heritage, Extreme Appearance, Villainous.
Traits: Fearless, Hive Mind, Infector (Brood implantation, Queens only), Venomous.
Suggested Occupation: Military.
Powers: Additional Limbs, Flight 1 (except for Queens), Mighty 1, Sturdy 1.
Minimum Rank: 2.
Limitation: Unless the Brood is a Queen, the character can only pick additional powers as if they had the Special Training origin.

Alien: Marginalian

The character is a Marginal, a species of asexually reproducing hermaphrodites who come from Marginalia, a space between universes. They are legless, shaped like a green potato with arms, and they get around by means of levitation.

Examples: Doop.
Tags: Alien Heritage, Extreme Appearance.
Traits: Weird.
Suggested Occupation: Outsider.
Powers: Dimensional Portal, Dimensional Travel, Dimensional Travel Other, Dimensional Travel Together, Grow 2, Healing Factor, Levitation, Shrink 2, Sturdy 2, Uncanny 2.
Minimum Rank: 3.

Alien: Technarch

The character is a member of the alien species known as the Technarchy. These artificially intelligent techno-organic beings use a Transmode virus to infect other creatures and eventually take over a planet to prepare it to become part of the Phalanx or be devoured.

Examples: Warlock, Magus.
Tags: A.I., Alien Heritage, Extreme Appearance, Powerful.
Traits: Enduring Constitution, Fresh Eyes, Infector (Transmode virus).
Suggested Occupation: Outsider.
Powers: Brain Drain, Disguise, Environmental Protection, Extended Reach 1, Flexible Bones 1, Leech Life, Shape-Shift.
Minimum Rank: 3.

Art by John Cassaday & Laura Martin

Michael Syrett (Order #53194700)

Monstrous: Mummudrai
The character is a monster known as a Mummudrai, an evil twin spirit from the Astral Plane that each fetus must fight and defeat in the womb to be born. Few of them survive, but those who do can become terrifyingly powerful, as they can copy DNA and fashion physical forms for themselves.

Examples: Cassandra Nova.
Traits: Monster.
Powers: DNA Manipulation.

Mutant
The character's powers spring from them being a member of the subspecies *Homo superior*. They have a latent X-Gene that grants them powers, often triggered at adolescence.

Examples: Cyclops, Jean Grey, Namor, Professor X, Storm, Wolverine (Logan).
Tags: Hounded, X-Gene.
Suggested Tags: Arakkii or Krakoan.

Mutant: Artificial
The character's powers spring from DNA manipulation—or a natural, inherent condition—that makes them appear to be a true mutant. They believe themselves to be a mutant, or they did for years. However, they were not born with an X-Gene.

Examples: Deadpool, Mister Sinister, Quicksilver, Scarlet Witch.
Tags: Hounded, Mutant Associate.

Mutant: External
The character is a member of a rare and powerful subspecies of immortal mutants that stretches back thousands of years. Roughly a thousand years ago, the Externals formed a group called the High Lords that continues to influence the world's destiny from behind the scenes. Some of them believe Cannonball to be the latest of their kind, although this is unconfirmed.

Examples: Apocalypse, Selene.
Tags: Externally Immortal, Hounded, X-Gene.
Traits: External Awareness.

NEW TRAITS
This section features new traits that characters in the profiles chapter of this book use. Other characters can use them as well.

If you've already created an original character and you would like to use one of these new traits, speak with your Narrator about it. If it makes sense to do so, you can swap a previously chosen trait for a new one. This could represent a transformation into a new period for the character, or it could be simply a redefinition of who the character has always been.

External Awareness
The character has a telepathic link with all other Externals. This allows them to:

- Know where other Externals are.
- Know when other Externals are first killed.
- Know when an External kills another External.
- Telepathically call for other Externals.

Restriction: For Externals only.

Hive Mind
The character has some independence but is connected to others of their kind by a telepathic network with an unlimited range and an unlimited number of members. When given orders by the leader of that network, the character must make an Ego vs. TN 18 action check or follow those orders. On a Fantastic success, the character can choose to permanently break free from the network.

Restriction: For Brood only.

Infector
The character can infect a target with a disease, which must be chosen along with the trait. Examples include:

- Brood implantation
- Techno-Organic virus
- Transmode virus

See the infected condition (p. 139) for details about how infection works, and the Infections and Possessions section (p. 146) for the effects of the above diseases.

Magic Item Reliance

The character relies on a magically empowered item for some or all of their powers. When they take Health damage that would render them unconscious, they can instead choose to lose all of their magic-item–related powers and remain conscious with 1 point of Health left.

Similarly, if they take Focus damage that would render them demoralized, they can instead choose to lose all of their magic-item–related powers and have 1 point of Focus left.

Magic items are notoriously difficult to destroy. They cannot be harmed by most attacks. However, they can be taken away or lost. Many characters would go to great lengths to recover the magic items that grant them powers.

Unusual Size
The character's regular size is beyond those for small, average or big, as shown on the Resize Effects table (see p. 73 of the *Core Rulebook*). When picking this trait, the player must choose the character's size: microscopic, miniature, tiny, little, huge, gigantic, titanic or gargantuan. Apply the modifiers listed on the Resize Effects table, just as if the character had grown or shrunk to that size, but permanently.

The one exception is a character's Flight Speed. If they are microscopic, miniature, tiny or little, calculate their Flight Speed as if they were small-sized. If they are huge, gigantic, titanic or gargantuan, calculate their Flight Speed as if they were big-sized.

Venomous
When the character uses sharp Melee Weapons powers and gets a Fantastic success, they have the option of causing a target to be poisoned rather than bleeding.

Michael Syrett (Order - 5319-1700)

NEW TAGS

The new origins come with a number of new tags. Other characters can use these new tags as well.

If you've already created an original character and you would like to use some of these new tags, speak with your Narrator about it. If it makes sense to do so, you can add any tags you like from this section. This could represent a transformation into a new period for the character, or it could be simply a redefinition of who the character has always been.

In addition, the Krakoan tag has been updated to account for the fall of the nation of Krakoa.

Arakkii

The character hails from Arakko, which was once part of the same island as Krakoa before it was severed and sent into the dark dimension of Amenth. Arakko has since returned to the regular world and been transplanted onto a terraformed Mars.

Arakkii society emphasizes independence. Arakkii do not accept help from others and often settle disputes by means of formal duels. They refuse to allow the Five to resurrect them.

Restriction: For mutants only.

Early Bloomer

The character is a rare kind of throwback mutant who gained their powers at birth. In most cases, this means their parents hid their powers as long as they could—or that the authorities took charge of them early on, supposedly for everyone's protection.

Art by David Lopez

Externally Immortal

The character is nearly impossible to permanently kill. If they die, they are either revived somehow or reincarnated with their full memories, and then they age quickly till they reach the age of their first death, at which point they stop aging at all.

The only way for an External to permanently die is for another External to kill all the others within a certain period of time and either drain their life energies or eat their hearts, which grants the killer the victim's powers. Otherwise, they come back again.

Restriction: For Externals only.

Krakoan

The character is a citizen of the mutant nation of Krakoa.

Upon the founding of Krakoa as a nation, citizenship was granted automatically to all Earth-born mutants. At the height of that nation's power, if a Krakoan was killed, the Five—a group of powerful mutants—could work together to resurrect that mutant in a cloned body, with most of their memories intact. If killed in Otherworld, the character could still be resurrected, but they would be changed in unpredictable ways. How this might affect the character is up to the Narrator.

In the current status quo, Krakoa has fallen. Mutants no longer automatically have access to the Krakoan gates or resurrection by the Five. Characters who once lived on Krakoa might retain this tag, though, to represent their attachment to the mutant homeland.

Restriction: For mutants only.

Mental Health Conditions

The character has mental health conditions. These might include anxiety, depression, dissociative identity disorder or other conditions.

Mobility Issues

The character has mobility issues. This can range from using a cane to using a wheelchair.

Michael Syrett (Order - 53194700)

Mutant Associate

Much of the public believes—or has believed—the character to be a mutant. While this isn't technically true, the character is lumped in with other mutants in most people's minds.

Restriction: For non-mutants or those with the Mutant: Artificial origin.

Secondary Mutation

In rare cases, a mutant can experience a secondary mutation at some point after their original mutation. A good example is Emma Frost, who started out as a fairly straightforward telepath but later gained a secondary mutation that allowed her to turn into living diamond.

This is not a new origin but a new tag that serves as an extension of the regular Mutant origin. Only characters with the Mutant origin can have a secondary mutation.

If a character has this tag, it means that they once had a lower rank cap and broke through it. For example, they might have been at Rank 3 for years and then gained a secondary mutation that let them eventually rise to Rank 5.

When an existing character gains this tag, they advance to the next rank. Thus, a character can take it only after they've had enough adventures that they would normally be able to rank up but cannot because of their rank cap. Taking this tag means they can add a single rank, and if their new rank cap allows further growth, they can play to gain more ranks as normal.

If the player of an existing character wants to take this tag for their character, they should talk to their Narrator about the rank cap. This should cover:

- The character's current rank cap and the reasons it was chosen.
- The ranks and rank caps of the other characters on the team.
- What the new rank cap should be.

Alternatively, the Narrator can suggest the Secondary Mutation tag to one or more players. If the Narrator wants to expand the horizons for the team's adventures, they might propose this to help ensure that the characters are powerful enough to meet the new challenges the game has in store for them.

Sometimes this is as simple as allowing the character to reach the same ranks as others on the team who are of a higher rank. Initially, the player might have thought it would be fun to play at a lower rank (like Hawkeye on the Avengers) but now wants their character to be on a more equal footing with their teammates.

However, if the player wants their character to reach a higher rank than the rest of the team, that could cause friction. In such cases, it's best to include the entire team in the conversation to make sure that everyone is comfortable with the decision. Otherwise, the characters can find themselves in a race to reach Rank 6. That's fine if that's what everyone wants, but it can change the nature of the game and the challenges the characters face in their adventures.

Restriction: For mutants only.

NEW POWERS

A number of the character profiles in this book feature new powers. Some of these powers belong to entirely new power sets. Others are new additions to current power sets.

The new power sets are:

- Healing
- Luck
- Sixth Sense
- Translation

Each of these new power sets is described in detail below. In addition, there are new powers or clarifications for the following power sets:

- Power Control
- Resize
- Telepathy
- Teleportation

There are also some notes on existing powers and power sets.

Elemental Control

There are two new types of elements that characters can select for their Elemental Control powers: chemicals and toxins. Their special effects are as follows:

- **Chemical:** The target is corroding.
- **Toxin:** The target is poisoned.

Each type of Elemental Control power is considered a distinct power set. This means that similar powers that use different elements are considered different powers too.

Healing

This power set allows the character to heal both physical and mental damage. This ranges from stopping bleeding all the way up to resuscitating someone who is technically dead. Characters like Elixir and Healer often use such powers. While such characters often aren't a direct help in a fight, they can get the bruisers on their team patched up and right back into a brawl. Some of them can reverse their healing powers to cause damage to people instead.

Powers List

- Cure-All
- Healing Hands
- Let's Go
- Never Surrender
- Restore
- Resurrect
- Soothing Touch

Michael Syrett (Order - 5319-1700)

Luck

This power set gives a character the ability to influence probability, both for good and for bad. This can cause the most unlikely of things to happen—although not the impossible. Domino and Longshot are examples of heroes who use such powers to their own advantage. Conversely, Black Cat uses her powers to inflict bad luck on those who cross her path.

Remember that edges due to the same factor do not stack. This means that a character can have only one edge from a Luck power at a time. This is true whether the Luck powers belong to the same character or different characters.

Powers List

- Charmed Life
- Evil Eye
- Jinx You
- Jinx You All
- Lucky Me
- Lucky Us
- Lucky You
- Real Jinx
- Wish You Luck

Power Control

There are two new powers for the Power Control set: Power Slider and Swap Powers. Power Slider boosts or dampens the character's own powers based on things that happen to them, while Swap Powers allows the character to trade powers with a target character.

Powers List

- Power Slider
- Swap Powers

Resize

There are no new powers for the Resize power set, but there are two clarifications.

Flight: Most of a character's speeds are recalculated when the character changes size. However, Flight Speed does not change. The character flies at their regular Flight Speed no matter their size.

Growing Into Spaces: When a character grows into spaces occupied by other things, characters who are little or smaller remain where they are and can occupy the same space as the growing character, just like normal. However, characters who are average size or larger are shoved aside by the growing character. Move them as few spaces as possible, leaving them in a space adjacent to the growing character. If the character or object the growing character pushes up against is normally unmovable, the growing character should move their own center to accommodate this.

Treat any attempt to crush another character in this way as if the growing character is throwing themself at the character they want to crush. This requires an Agility check against the target's Agility defense, and a failure damages the attacker. A success damages both the attacker and the target.

Sixth Sense

This power set covers the knowledge of things that have already happened, are currently happening or will happen at some point in the future. This can range from the content of someone's DNA all the way up to the death of a star on the far side of a galaxy. It also can help you figure out what happened in a particular place or—perhaps more importantly—what's likely to happen in the near future.

If possible, the Narrator and the player should work out a way to communicate such information secretly. This could be as simple as passing notes back and forth or sending private messages electronically. This way the player can decide what to do with the knowledge their power grants them, including if and when to reveal it.

Characters don't have to tell the other members of their team the truth about what's going to happen. After they establish proof of their power, they can use that earned trust however they like.

Tinkering with visions of the future is always fraught with challenges. Any future events that a character sees or knows about are not set in stone. They present only the most likely outcome. Characters can try to prevent these events from coming about, although they might not succeed. In fact, their attempts might unintentionally cause the feared events to happen.

Powers List

- Cosmic Awareness

- Detect Supers
- Intuition
- Microscopic Awareness
- Postcognition 1–4
- Precognition 1–4

Telekinesis

There are no new powers for the Telekinesis set, but there is a new rule for determining how large an object a character can use such powers on.

Use the rules for physically carrying and lifting things found in the *Core Rulebook*. However, when using Telekinesis powers, the character should make Logic checks rather than Melee checks when required. In addition, a character can act as one size bigger for these purposes for each level of Brilliance that they have, much in the way Mighty amplifies doing such things physically.

Art by Dylan Burnett & Jesus Aburtov

Telepathy

There is one new power for the Telepathy power set: Copy Psyche. This allows a character to entirely copy another person's mind and then either share it or move it to another body or specialized storage system.

Powers List

- Copy Psyche

Teleportation

The Teleportation power set gains three new powers, all based around the idea of making two things swap places rather than simply moving one thing to a new place. The prime example of a character with this power is Escapade.

There's a related power called Swap Powers, but that falls under the Power Control set.

Powers List

- Swap Items
- Swap Places
- Swap Status

Translation

With this power set, a character can understand and translate different forms of communication, written, spoken or otherwise. This can include languages of all kinds but also raw data, body language, facial expressions and more. They can also break codes and other sorts of encryption.

This power set might not seem all that important when the character is in the middle of a battle, but when it comes to diplomacy and helping people (even sentient islands like Krakoa) understand each other, it's invaluable. Cypher is the ultimate example of a character with these powers.

If a character fails a translation check, they can attempt it again either after one day or after a full hour of dedicated study.

NEW POWER DESCRIPTIONS

Here are the new powers described in full. Each description follows the same format as in the *Core Rulebook*.

Charmed Life

The character seems like they were born lucky.

Power Set: Luck
Prerequisites: Rank 4
Duration: Permanent
Effect: The character gains an edge on any single action check each round. This does not stack with any other edges.

Copy Psyche

The character can move whole minds around.

Power Set: Telepathy
Prerequisites: Information Upload, Rank 4
Action: Standard
Duration: Instant
Cost: 15 Focus
Effect: The character can copy the mind of a person with whom they have established a telepathic link and store it in their own mind. This power can also be used to transmit a mind—either theirs or a stored copy of someone else's—into the mind of another person with whom they've established a telepathic link. Additionally, it can be used to erase a copy of a mind from a person's brain.

A character can hold up to one extra mind in their head for every rank the character has. The person whose mind was copied suffers no ill effects.

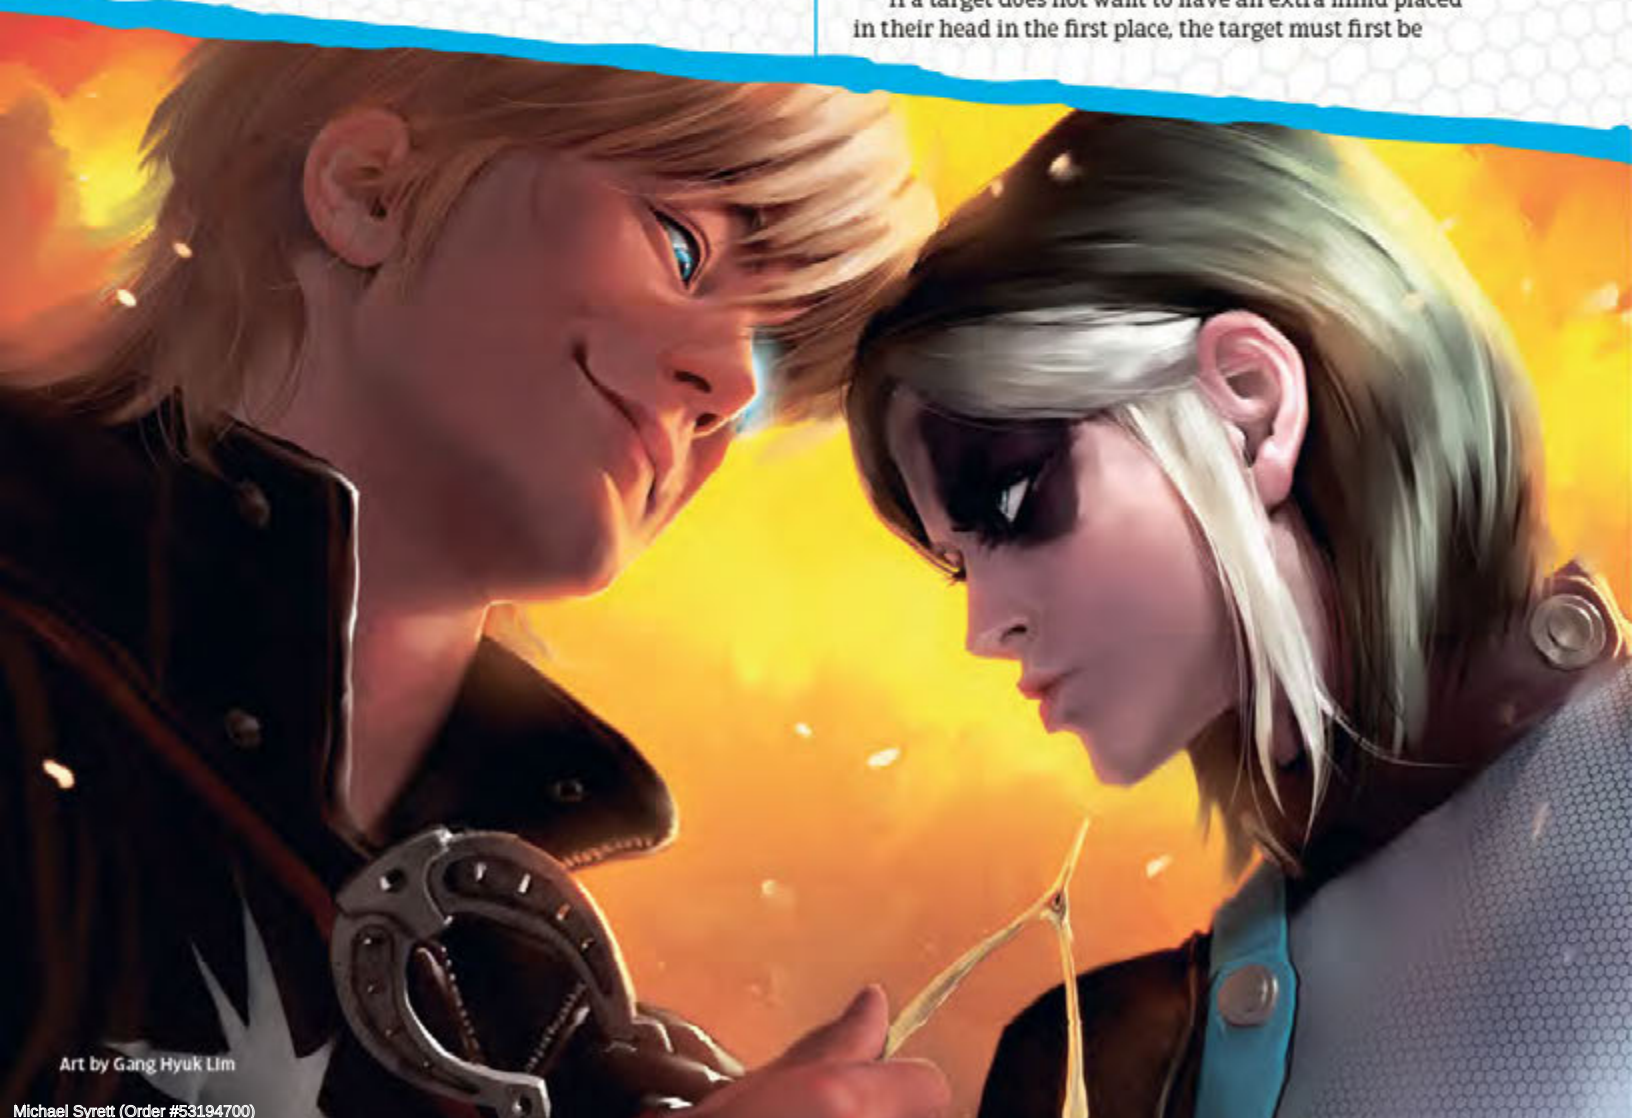
The character can have conversations with the minds stored in their head, and the guest minds can try to influence the character's decisions and actions. If the character wants to know something that's in a guest mind, they can use the Mind Reading power on it. However, they don't have to first establish a telepathic link to do so.

At the end of every day that a character has more than one mind in their head, they must make a Resilience vs. TN 10 action check. If they fail, they lose 5 Focus. This Focus cannot be regained until the character gets rid of any extra minds. It may take a while, but eventually, the character is sure to wind up demoralized until they rid themselves of any extra minds.

If a character with extra minds in their head wants to remove an extra mind, they can make a Logic check against the mind's Logic defense. If they succeed, they permanently delete the copied mind from their brain. If they fail, they lose 5 Focus.

When a character with extra minds in their head is demoralized, any mind inside them can attempt to take over their body. To do so, the mind must make a Logic check against the character's Logic defense. On a success, the mind gains control of the character's body. (If more than one mind tries this at once, the highest result prevails.) On a Fantastic success, the mind takes over the target's body with the body's Focus fully restored.

If a target does not want to have an extra mind placed in their head in the first place, the target must first be



Art by Gang Hyuk Lim

Michael Syrett (Order #53194700)

demoralized before the attempt is made. Then the character using this power must make a Logic check against the target's Logic defense. On a success, the new mind is copied over. On a Fantastic success, the mind takes over the target's body with the body's Focus fully restored.

If a body is taken over in this way, the original mind remains and cannot be removed. It can try to take over its body again if the new controller of the body becomes demoralized.

If a character with extra minds in their head is shattered, all extra minds in it are permanently lost, in addition to the regular effects.

In the case of the Krakoan resurrection protocols, Cerebro is used to copy a character's entire mind. It then stores the mind in a device designed by Forge. Any telepath with this power can copy a stored mind and transmit it into a fresh clone of the body from which it emerged, effectively resurrecting that character.

Cosmic Awareness

The character can detect details about things anywhere in the universe.

Power Set: Sixth Sense
Prerequisites: Microscopic Awareness, Rank 4
Action: Standard
Duration: Concentration
Range: Unlimited
Cost: 15 Focus
Effect: The character can sense selected things at any distance from them, as long as they are in the same universe as what they are attempting to detect. This can include the location, relative velocity and overall emotional and physical status of any item, creature or group known to the character.

Cure-All

The character can cure what ails you—mostly.

Power Set: Healing
Prerequisites: Healing Hands, Rank 4
Action: Standard
Duration: Instant
Range: Reach
Cost: 15 Focus
Effect: With a touch, the character can cure any temporary ailments a target suffers from. The character makes an Ego vs. TN 12 action check. On a success, the effects of the ailment end immediately. On a Fantastic success, treat the result like a recovery check, and the target gains back that much of any Health and Focus lost to the condition.

This can affect conditions including ablaze, bleeding, blinded, corroding, deafened, demoralized, paralyzed, poisoned and unconscious. If the target was demoralized, they now have 1 Focus, and if the target was unconscious, they now have 1 Health. (They can have more if the character got a Fantastic success and recovered more for them.)

Note that this only works on acute conditions and diseases, those the target has contracted recently and that would—under ideal circumstances—resolve soon, leaving them alive. It does not affect chronic or permanent diseases or serious diseases that are likely to be fatal.

For instance, it can cure temporary deafness but not permanent deafness. It can stop an allergy attack but not the allergies themselves. It can cure poison but not cancer. It has no effect against the Techno-Organic virus, the Transmode virus, the Legacy virus or other such diseases.

Danger Sense

The character can feel danger on the way.

Power Set: Sixth Sense
Prerequisites: Precognition 1, Rank 2
Duration: Permanent
Effect: Even if the character doesn't get a Fantastic result on their initiative check, they get a turn during the bonus round of any combat they are in. This works even if no one else in the combat can act in the bonus round.

Detect Lie

The character can tell if you're telling the truth.

Power Set: Translation
Prerequisites: Understand Body Language, Rank 2
Action: Standard or reaction
Trigger: Verbal communication the character can understand
Duration: Instant
Cost: 5 Focus
Effect: When someone communicates in an active form the character can understand—verbally, telepathically, using sign language and so on—the character can make an Ego check against the communicator's Ego defense. On a success, the character knows if the communicator is lying. On a Fantastic success, they also know (if possible) *why* the communicator is lying.

This power does not allow the character to know the truth, although they may be able to figure it out by detecting lies. Also, it only works on communicators who know they are lying. If they believe what they are saying—even if it is wrong—no lie can be detected.

Detect Supers

The character can sense super-powered people.

Power Set: Sixth Sense
Prerequisites: None
Action: Standard
Duration: Concentration
Effect: The character can sense anyone within a certain distance of them who has super-powers. This reveals a count of the number of people who have powers and their rough distance and direction from the character. It doesn't supply any other information, like name, appearance, the type of powers and so on.

Note that powers that can be picked by someone with the Special Training origin are not considered super-powers.

When the character picks this power, they have two options. They can take the power as it is, or they can limit it to detecting powers from a single origin, like Mutant or Alien (including all subtypes). If they take the regular power, its range is 5 miles. If they take a limited power, its range is 25 miles. For example, the character can have Detect Supers with a range of 5 miles or Detect Supers: Mutants with a range of 25 miles.

ichael Syrett (Order - 53194700)

Evil Eye

The character can inflict trouble on those who cross their path.

Power Set: Luck
Prerequisites: Jinx You, Rank 2
Action: Standard
Duration: Concentration
Range: 5 spaces per rank
Cost: 5 Focus per turn
Effect: The character picks a foe in their line of sight. That foe has trouble on all action checks made for the power's duration. There is no limit on the range between the character and the foe once the power is activated.

The character must pay the Focus cost at the start of each of their subsequent turns of concentration to keep the power working.

Healing Hands

The character has a healing touch.

Power Set: Healing
Prerequisites: Let's Go, Rank 3
Action: Standard
Duration: Instant
Range: Reach
Cost: 10 or more Focus
Effect: The character can heal a target creature with a touch. For every point of Focus the character spends, the target regains a point of Health, up to their maximum score. The character must spend at least 10 Focus to use the power. Any Health points that would have been healed beyond the target's maximum Health are lost.

Indecipherable

The character has a language all their own.

Power Set: Translation
Prerequisites: Understand Spoken Language, Understand Unusual Communication, Rank 3
Duration: Permanent
Effect: The character has constructed an internal language that only they can understand. They think in this language entirely, and when they communicate with others, they are translating from that language. This effectively renders them immune to telepathic powers like Mind Reading or Mind Interrogation, as anyone trying to read their mind cannot understand this unique language.

Intuition

The character has a bad feeling about this.

Power Set: Sixth Sense
Prerequisites: Rank 2
Action: Standard
Duration: Instant
Cost: 5 Focus
Effect: When faced with a decision, the character can get a feeling about which choice would be best for them in the long run. When activating this power, the player presents the choice to the Narrator, and the Narrator tells them which choice the intuition is leading the character toward.

Characters should take care when using this power. What is best for them might not be best for the rest of the team or anyone else they care about. Also, what's best in the long run might not be best for the character in the short run. In fact, what's best is often up for interpretation.

Jinx You

The character can hit you with a jinx.

Power Set: Luck
Prerequisites: Rank 2
Action: Standard
Duration: Concentration
Range: Reach
Cost: 5 Focus per turn
Effect: The character makes a Melee check to touch the target. On a success, the power takes effect, and that foe has trouble on all action checks made for the power's duration. On a Fantastic success, the target also takes standard (not doubled) Melee damage.

The character must pay the Focus cost at the start of each of their subsequent turns of concentration to keep the power working.

Jinx You All

The character can jinx a whole group of foes at once.

Power Set: Luck
Prerequisites: Evil Eye, Rank 3
Action: Standard
Duration: Concentration
Range: 5 spaces per rank
Cost: 10 Focus per turn
Effect: The character picks up to one foe per rank in their line of sight. Those foes have trouble on all action checks made for the power's duration. There is no limit on the range from the character to their foes once the power is activated.

The character must pay the Focus cost at the start of each of their subsequent turns of concentration to keep the power working.

Let's Go

The character can get a friend back on their feet.

Power Set: Healing
Prerequisites: Rank 2
Action: Standard or reaction
Trigger: The target is knocked unconscious.
Duration: Concentration
Range: Reach
Cost: 5 Focus
Effect: The character can eliminate the effects of a target losing all of their Health. Rather than falling unconscious, the target remains awake and mobile. They can use movement actions but not reactions or standard actions.

This does not protect a character from death. They can be killed normally, and this power cannot bring back a dead character.

Once the power takes effect, the target does not have to remain within the character's reach. When the effect ends, if the target has 0 Health or less, they become unconscious.

If the target's Health rises above 0 at any point, this power automatically ends.

Michael Syrett (Order - 5319-1700)

Lucky Me

Things are about to go the character's way.

Power Set: Luck
Prerequisites: Rank 2
Action: Standard
Duration: Concentration
Cost: 5 Focus per turn
Effect: The character gains an edge on all action checks made while this power is in effect. The character must pay the Focus cost at the start of each of their subsequent turns of concentration to keep the power working.

Lucky Us

The character can share their good fortune with many friends.

Power Set: Luck
Prerequisites: Wish You Luck, Rank 3
Action: Standard
Duration: Concentration
Range: 5 spaces per rank
Cost: 10 Focus per turn
Effect: The character picks up to one ally in their line of sight per the character's rank. The character and those allies gain an edge on all action checks made while this power is in effect. There is no limit on the range from the character to their allies once the power is activated.

The character must pay the Focus cost at the start of each of their subsequent turns of concentration to keep the power working.

Lucky You

The character can give good fortune to a friend.

Power Set: Luck
Prerequisites: Lucky Me, Rank 2
Action: Standard
Duration: Concentration
Range: Reach
Cost: 5 Focus per turn
Effect: The character touches an ally. That ally gains an edge on all action checks made while this power is in effect.

Microscopic Awareness

The character can detect details about the smallest things.

Power Set: Sixth Sense
Prerequisites: Rank 2
Action: Standard
Duration: Concentration
Range: 1 space per rank
Cost: 5 Focus
Effect: The character can see and identify items that would normally require a microscope to detect, much less comprehend. This includes things like fingerprints, a single strand of hair and even a person's DNA. In the case of DNA, the character can use this to identify a person and link them to close relatives with similar DNA.

Art by David Baldeón, Michael Shelfer & Jim Charalampidis

Michael Syrett (Order - 53194700)

Never Surrender
The character can help a friend rally.

Power Set: Healing
Prerequisites: Rank 2
Action: Standard
Duration: Concentration
Range: Reach
Cost: 5 Focus
Effect: The character can eliminate the effects of a target losing all of their Focus. Rather than becoming demoralized, the target can function normally without having trouble on all their actions due to their lack of Focus. They cannot spend more Focus, though, and they can still be shattered.

Once the power takes effect, the target does not have to remain within the character's reach. When the effect ends, if the target has 0 Focus or less, they become demoralized.

If the target's Focus rises above 0 at any point, this power automatically ends.

Postcognition 1
The character knows what just happened.

Power Set: Sixth Sense
Prerequisites: Rank 2
Action: Standard
Duration: Instant
Cost: 5 Focus
Effect: The character can sense what happened to a particular person, place or item within their reach—including themselves—in the past six hours.

If using the power to analyze a person, they sense the events from the person's point of view, using that person's senses. If the person is unconscious, dead or otherwise senseless at any point during that time, the character cannot sense anything at those points either.

If using the power to analyze a place, the character can sense everything that happened in that place over that period of time, using their own senses. It seems to the character as if they are standing in their current location and position.

If using the power to analyze an item, the character senses how the item was affected or used over that period of time, no matter where it was located or how it moved. They can sense things as if the item had their senses.

The character can fast-forward and rewind through the period of time and stop at interesting parts, allowing them to play out in real time.

Postcognition 2
The character knows what happened in the past day.

Power Set: Sixth Sense
Prerequisites: Postcognition 1, Rank 3
Action: Standard
Duration: Instant
Cost: 10 Focus
Effect: The character can sense what happened to a particular person, place or item within their reach—including themselves—in the past 24 hours. Otherwise, this power works the same as Postcognition 1.

Postcognition 3
The character knows what happened in the past year.

Power Set: Sixth Sense
Prerequisites: Postcognition 2, Rank 4
Action: Standard
Duration: Instant
Cost: 10 Focus
Effect: The character can sense what happened to a particular person, place or item within their reach—including themselves—in any 24-hour period in the past year. Otherwise, this power works the same as Postcognition 1.

Postcognition 4
The character knows what happened in the past century.

Power Set: Sixth Sense
Prerequisites: Postcognition 3, Rank 5
Action: Standard
Duration: Instant
Cost: 20 Focus
Effect: The character can sense what happened to a particular person, place or item within their reach—including themselves—in any week-long period in the past century. Otherwise, this power works the same as Postcognition 1.

Power Slider
The character's power waxes and wanes with what's vital to them.

Power Set: Power Control
Prerequisites: Rank 3
Duration: Permanent
Effect: The character has a single criterion that affects the strength of their powers on a spectrum. The character starts off normal, but they can become boosted or dampened from there.

When things are going well for the character, all of their other powers are boosted. If the powers have ranges or effective areas or durations, these are doubled. If the powers affect damage multipliers, add 1 to the effects. Any effects that normally happen on a Fantastic success automatically happen on any success, not just a Fantastic one. Also, anything that would dampen their powers only brings them back to normal.

When things are going poorly for the character, all of their other powers are dampened. If the powers have ranges or effective areas or durations, these are halved. If the powers affect damage multipliers, subtract 1 from the effects. The power can no longer enjoy Fantastic successes. Also, anything that would boost their powers only brings them back to normal.

These effects last for a single combat or—if they happen outside of combat—a single day.

Here are three criteria to pick from: confidence, faith and media popularity. With the Narrator's consent, players can come up with others.

- **Confidence:** If the character gets a Fantastic success on an important action check, their confidence soars, and their powers are boosted. If the character fails an important action check, their confidence falls, and their powers are dampened.

Michael Syrett (Order - 5319-1700)

- **Faith:** If something the character believes as a core part of their faith is shown to be true, their faith soars and their powers are boosted. If something the character believes as a core part of their faith is shown to be doubtful, their faith falls, and their powers are dampened.
- **Media Popularity:** If the character's media ratings substantially rise (more people watch their shows), their powers are boosted. If the character's media ratings substantially fall (fewer people watch their shows), their powers are dampened.

The criteria in question may go up and down often, seeming to leave the character to the whims of fate, but ignore minor changes. Only something that feels like a special moment should cause a change.

Players may be tempted to set up their characters to constantly succeed. If this happens, Narrators should remember that they can often tip matters in the other direction. The swinging back and forth makes things more fun than keeping them always on an even keel.

Precognition 1

The character can see the near future.

Power Set: Sixth Sense
Prerequisites: Intuition, Rank 2
Action: Standard
Duration: Instant
Cost: 5 Focus
Effect: The character gains a sense of what is going to happen to a particular person, place or item within their reach—including themselves—in the next 24 hours. The further out any particular future is, the harder it is for the character to be certain about elements of that future. However, they can sense broad paths. Especially perilous or likely (or worse, both) possibilities often stand out like beacons in the night.

The player can ask the Narrator a single question about the day ahead and get an honest answer based upon what the Narrator thinks is most likely to happen. The Narrator should give short and direct answers without detailed explanations. It is perfectly fine for the answer to be cryptic and to leave the player with more questions than they started with.

These answers do not dictate what is fated to happen. They only give hints as to possible futures. The choices the players make and the chances they take have a tremendous impact upon these outcomes.

Art by Giuseppe Camuncoli & Jesus Aburtov

Michael Syrett (Order - 53194700)

Terribly unlikely things happen all the time, which means that the character's sense of the future is not infallible. However, they are rarely outright wrong.

This is a great power for a character the Narrator controls. They can use it to lead the players around, give them guidance, and perhaps even set them up for a horrible betrayal. The characters, of course, don't have to believe what a precognitive character tells them and might even openly defy their advice.

However, this can be an incredibly challenging power to handle as a player. The Narrator shouldn't spoon-feed details to the player. They should answer the player's questions in generalities when possible and not offer extra details. If the player isn't concerned enough about something to ask about it, then it doesn't occur to the character to consider that particular aspect of the future either.

If appropriate, the Narrator can state that the future is too uncertain to be determined at any particular moment. This often happens at climactic moments when there are too many possible futures to consider, or when the ones available are equally likely to happen. The Narrator should use this option judiciously, though. If the character can't ever effectively use their power, that's a sure road to frustration.

The Narrator can also present the character with visions that the character didn't ask for. These often happen when something vitally important is destined (or at least likely) to occur that can negatively affect the character or people they care about. This could be a personal crisis or a disaster that's bound to catch the character up in it. Such visions still cost Focus. They drain the character, even if they were not requested.

Precognition 2

The character can see the week ahead.

Power Set: Sixth Sense
Prerequisites: Precognition 1, Rank 3
Action: Standard
Duration: Instant
Cost: 10 Focus
Effect: The character gains a sense of what is going to happen to a particular person, place or item within their reach—including themselves—in the next week. Otherwise, this power works the same as Precognition 1.

Alternatively, the character can consider the fate of something within a mile of their location (rather than within their reach) over the next 24 hours. The character simply closes their eyes and thinks about the thing in question, which must be something they already know about.

Precognition 3

The character can see the month ahead.

Power Set: Sixth Sense
Prerequisites: Precognition 2, Rank 4
Action: Standard
Duration: Instant
Cost: 15 Focus
Effect: The character gains a sense of what is going to happen to a particular person, place or item within their reach—including themselves—in the next month. Otherwise, this power works the same as Precognition 1.

Alternatively, the character can consider the fate of something within a mile of their location (rather than within their reach) over the next week, or something within 100 miles of their location over the next 24 hours. The character simply closes their eyes and thinks about the thing in question, which must be something they already know about.

Precognition 4

The character can see a whole year ahead.

Power Set: Sixth Sense
Prerequisites: Precognition 3, Rank 5
Action: Standard
Duration: Instant
Cost: 20 Focus
Effect: The character gains a sense of what is going to happen to a particular person, place or item within their reach—including themselves—in the next year. Otherwise, this power works the same as Precognition 1.

Alternatively, the character can consider the fate of something within a mile of their location (rather than within their reach) over the next month, or something within 100 miles of their location over the next week, or something within 1,000 miles of their location over the next 24 hours. The character simply closes their eyes and thinks about the thing in question, which must be something they already know about.

Real Jinx

The character is bad luck—for their foes.

Power Set: Luck
Prerequisites: Rank 4
Duration: Permanent
Effect: All characters who attempt to harm the character by direct action have trouble on their action checks. This does not stack with any other trouble.

Restore

The character can heal a shattered mind.

Power Set: Healing
Prerequisites: Soothing Touch, Rank 5
Action: Standard
Duration: Instant
Range: Reach
Cost: 20 Focus
Effect: The character can bring a target back from being shattered. To attempt this, the character makes an Ego vs. TN 20 action check. On a success, the target is restored to 1 Focus. On a Fantastic success, the target is restored to full Focus.

With any kind of success, the character using this power is then reduced to 1 Focus. On a failure, they only have to pay the minimum cost of 20 Focus..

Resurrect

The character can help someone defy death.

Power Set: Healing
Prerequisites: Healing Hands, Rank 5
Action: Standard
Duration: Instant
Range: Reach

Michael Syrett (Order - 5319-1700)

Cost: 20 or more Focus
Effect: The character can try to bring a target back from the dead if they do so soon after the target's death. To attempt this, they must be able to touch the dead target's body, and that body must be relatively intact—at least enough so that if the person came back to life they wouldn't instantly die again.

The character makes an Ego check against a TN equal to 10 plus 1 for every hour the target has been dead. For example, if the target has been dead for four hours, the TN is 14.

On a success, the target is restored to 1 Health. On a Fantastic success, the target is restored to full Health.

With any kind of success, the character using this power is then reduced to 1 Focus. On a failure, they only have to pay the minimum cost of 20 Focus.

Soothing Touch

The character can help get a friend's head back in the game.

Power Set: Healing
Prerequisites: Never Surrender, Rank 3
Action: Standard
Duration: Instant
Range: Reach
Cost: 10 or more Focus
Effect: The character can restore a target creature's Focus with a touch. For every point of Focus the character spends, the target regains a point of Focus, up to their maximum score.

The character must spend at least 10 Focus to use the power. Any Focus points that would have been restored beyond the target's maximum Focus are lost.

Swap Items

The character swaps objects with someone else.

Power Set: Teleportation
Prerequisites: Swap Places
Action: Standard or reaction
Trigger: The character is attacked.
Duration: Concentration
Effect: The character swaps items they possess with the items of another person they can see within 2 spaces per the character's rank. These items can include weapons, clothing or anything else that is on the other person but not attached to them. When the effect ends, the swapped items return to the people who had them originally.

The character can swap all of their possessions, or they can be as selective as they like. The items must generally be swapped on an equal basis, but it is possible to swap something for nothing. For instance, the character could swap what's in their hands for what's in the target's hands. If they are holding nothing and the target has a pistol, they can swap the pistol for nothing.

If the person being swapped with is unwilling, the character must make an Ego check against that person's Vigilance defense to succeed.

Art by Pepe Larraz & Marte Gracia

ichael Syrett (Order - 53194700)

Swap Places

The character swaps places with someone else.

Power Set: Teleportation
Prerequisites: None
Action: Standard or reaction
Trigger: The character is attacked.
Duration: Concentration
Effect: The character swaps places with another person they can see within 2 spaces per the character's rank. When the effect ends, the character and the other person swap places again.

If the person being swapped with is unwilling, the character must make an Ego check against that person's Vigilance defense to succeed.

Swap Powers

The character swaps their powers for a target's powers.

Power Set: Power Control
Prerequisites: Rank 3
Action: Standard or reaction
Trigger: The character is attacked.
Duration: Concentration
Cost: 10 or more Focus
Effect: The character makes an Ego attack against a target they can see within 2 spaces per the character's rank. If the target's powers have costs, the character must pay the highest of them, or a minimum of 10 Focus. On a success, they swap all of their non-Swap powers with the target's powers. Both characters can now use their new powers as if they had always had them. When either character uses a swapped power, they must pay any cost for it normally as well.

Swap Status

The character swaps status with someone else.

Power Set: Teleportation
Prerequisites: Swap Items, Rank 2
Action: Standard or reaction
Trigger: The character is attacked.
Duration: Concentration
Cost: 5 Focus
Effect: The character swaps status with a target they can see within 2 spaces per the character's rank. The character can swap their entire status with the target, or they can be selective about it. Statuses they can swap include:

- Lost Health
- Lost Focus
- Any condition
- Occupation
- Traits
- Tags

When swapping lost Health or Focus, the character and the target each take their maximum Health or Focus and subtract from it anything that the other person has lost at that moment. The same thing happens when the effect ends. This could potentially kill or shatter someone, so the character should be careful when doing this.

Example: *Escapade has taken 50 points of Health damage, and she swaps her lost Health status with an A.I.M. agent who is unharmed. This brings Escapade's Health back up to full, but the A.I.M. agent only has 10 Health to start with. Taking on her lost 50 Health would kill him. However, Escapade is Heroic, so the Holding Back rules on p. 34 of the* Core Rulebook *would leave the A.I.M. agent with –9 Health instead, 1 point away from dying.*

When swapping occupations, the character gains the target's position, including their authority and their responsibilities. For instance, if the character swaps occupations with the ruler of a nation, others recognize them as being the ruler for as long as the effect continues.

When the effect ends, any alterations that have happened to either character swap back to the other. For instance, if one of the characters is killed while the other lives, that would swap when the effect ends. For this reason alone, characters should take extreme care with this power.

Understand Body Language

The character can read how a person holds themself.

Power Set: Translation
Prerequisites: None
Action: Standard
Duration: Instant
Effect: When the character encounters a culture for the first time, they can make a Logic vs. TN 13 action check to puzzle out its body language. If they already know any other version of the culture's language, they have an edge. On a success, they understand and can emulate the body language. On a Fantastic success, they permanently understand and can use it and never need to make a check for it again.

This covers not only any potential full-body language used by an alien species but also the body language of species that use other forms of communication. With such species, understanding their body language allows the character to understand more than the target's words might communicate, such as whether a person is aggressive, shy, anxious, reckless and so on.

Understand Code

The character can figure out any kind of code.

Power Set: Translation
Prerequisites: Understand Written Language
Action: Standard
Duration: Instant
Effect: When the character encounters an unknown code for the first time, they can make a Logic vs. TN 13 action check to puzzle it out. If they already know any other version of the language the code is based on, they have an edge. On a success, they understand and can communicate in the code. On a Fantastic success, they permanently understand and can use it and never need to make a check for it again.

Digital data communication is considered a form of code, and the character can use this power to understand such data too.

Michael Syrett (Order - 5319-1700)

Understand Sign Language

The character can get what someone is signing.

Power Set: Translation
Prerequisites: None
Action: Standard
Duration: Instant
Effect: When the character encounters an unknown sign language for the first time, they can make a Logic vs. TN 13 action check to puzzle it out. If they already know any other version of the language, they have an edge. On a success, they understand and can sign in the language. On a Fantastic success, they permanently understand and can use it and never need to make a check for it again.

Understand Spoken Language

The character can get what someone is saying.

Power Set: Translation
Prerequisites: None
Action: Standard
Duration: Instant
Effect: When the character encounters an unknown spoken language for the first time, they can make a Logic vs. TN 13 action check to puzzle it out. If they already know any other version of the language, they have an edge. On a success, they understand and can speak the language. On a Fantastic success, they permanently understand and can speak it and never need to make a check for it again.

Understand Unusual Communication

The character can understand any other form of communication.

Power Set: Translation
Prerequisites: Understand Body Language
Action: Standard
Duration: Instant
Effect: When the character encounters an unknown form of communication for the first time—one that doesn't depend on hearing, vision or code—they can make a Logic vs. TN 13 action check to puzzle it out. If they already know any other version of the communication, they have an edge. On a success, they understand and can use that form of communication. On a Fantastic success, they permanently understand and can use it and never need to make a check for it again.

This works with forms of communication that include other senses, like scent, touch, taste and so on.

Understand Written Language

The character can figure out what someone has written.

Power Set: Translation
Prerequisites: None
Action: Standard
Duration: Instant
Effect: When the character encounters an unknown written language for the first time, they can make a Logic vs. TN 13 action check to puzzle it out. If they already know any other version of the language, they have an edge. On a success, they can read and write the language. On a Fantastic success, they can permanently read and write it and never need to make a check for it again.

Wish You Luck

The character can make a friend lucky, even from across the room.

Power Set: Luck
Prerequisites: Lucky You, Rank 2
Action: Standard
Duration: Concentration
Range: 5 spaces per rank
Cost: 5 Focus per turn
Effect: The character picks an ally in line of sight. That ally gains an edge on all action checks made while this power is in effect. There is no limit on the range between the character and the ally once the power is activated.

The character must pay the Focus cost at the start of each of their subsequent turns of concentration to keep the power working.

NARRATIVE POWERS

In addition to the new regular powers, there is an entirely new kind of power: narrative powers. These powers don't fit within the regular framework for powers. They break the standard rules, and because of that they don't have rules in the same sense that standard powers do.

Narrative powers are ones that work in stories—like the kind you read in Marvel Comics—but are hard or impossible to pin down tightly with the regular rules. They can also throw off the balance of the game easily, so they're for use only by characters controlled by the Narrator.

Narrative powers are like Rank X characters (such as Galactus) or incredible items like the Infinity Gauntlet or the Cosmic Cube. They're so powerful that they can disrupt the entire game if not handled with the utmost care.

A prime example of a character with a narrative power is Isca the Unbeatable. Her power can be summed up in a single short sentence: "I cannot lose." As you might imagine, a character with a power like this can throw things off. In any sort of straight-up fight, she literally cannot be beaten. On the other hand, remaining unbeaten doesn't mean that she wins every conflict. It only means that she—or any side she chooses to take—cannot lose.

This can be interpreted and manipulated in all sorts of ways, and it requires careful attention from the Narrator. Otherwise, it can ruin the sense of fairness that goes into a role-playing game and reduce the game to a series of arguments about how such powers work and what they mean in any particular context.

The way a narrative power works often affects not only the character in question but the world—perhaps the entire universe—around them. When a character has such a power, this is sometimes their *only* power, as they don't need any others.

Using Narrative Powers

Narrative powers work exactly as described. Of course, there are all sorts of ways to interpret the descriptions, and such interpretations often depend on the unique circumstances the character finds themself in.

When there's any question about how a power works in a particular situation, the players and the Narrator should take a moment to reason out what they think should happen. If that occurs in the middle of a game, the Narrator might make a quick ruling to keep things moving, but the players and the Narrator can have a longer discussion about the power later.

In the end, the Narrator has the final say about how the power works in the game.

Conflicting Narrative Powers

Sometimes narrative powers conflict with one another directly, and it's up to the Narrator to sort out how they work.

Example: *Isca the Unbeaten faces another version of herself from another universe. They both have the power "I cannot lose." Who will win?*

The Narrator decides that not losing isn't quite the same as winning, so it's possible that the two Iscas simply reach a stalemate in which neither of them wins. How they reach that point is up to the Narrator, with the help of the rest of the players.

For instance, the two unbeatable characters might wind up in a battle. Throughout the battle, they act normally, attacking others, being attacked and so on. As the battle comes to a conclusion, the Narrator sees that only the two Iscas are likely to remain standing. When that happens, the Narrator declares a stalemate. Neither side has lost, so both Iscas have satisfied the requirements of their narrative power.

However, if the battle was more lopsided and it became clear that one side was certain to triumph, the Narrator could declare that the Isca on the losing side betrays her compatriots and allies with the winning side. Although this may not be what she would prefer, it keeps her from being on a losing side, again satisfying the requirements of her power.

Narrative Power Descriptions

Each of the following entries describes how a narrative power works in the game—or at least how the character using it understands that it works. The use of a narrative power can sometimes be expanded by interpreting it a new way. In many cases, the character with the power doesn't know every aspect of it. They only know what's worked for them so far, and they may discover new uses for it along the way.

A narrative power takes up a single power pick. However, many characters with narrative powers don't use all of their power picks, mostly because they don't need them.

Cannot Lose

The character cannot lose any challenge or contest in which they participate. This is not the same as winning, so if there is a possibility that they neither win nor lose, that satisfies the conditions of not losing.

The character must be careful about picking sides in any conflict. Their influence means the side they pick is the one most likely to prevail. However, their power may also compel them to switch sides so they don't lose, even if that's not how they would prefer events to transpire. This prevents the character from simply choosing a winner in any conflict.

The character cannot shut off this power, so it can sometimes feel more like a curse than a blessing.

Example: Isca the Unbeaten

DNA Manipulation

The character is able to identify, copy and manipulate DNA in themselves and others. They can use this to create a body from scratch that they can then occupy by using the Copy Psyche power.

In addition, the character can cause latent mutant powers to manifest upon command, both in their own body and in that of others.

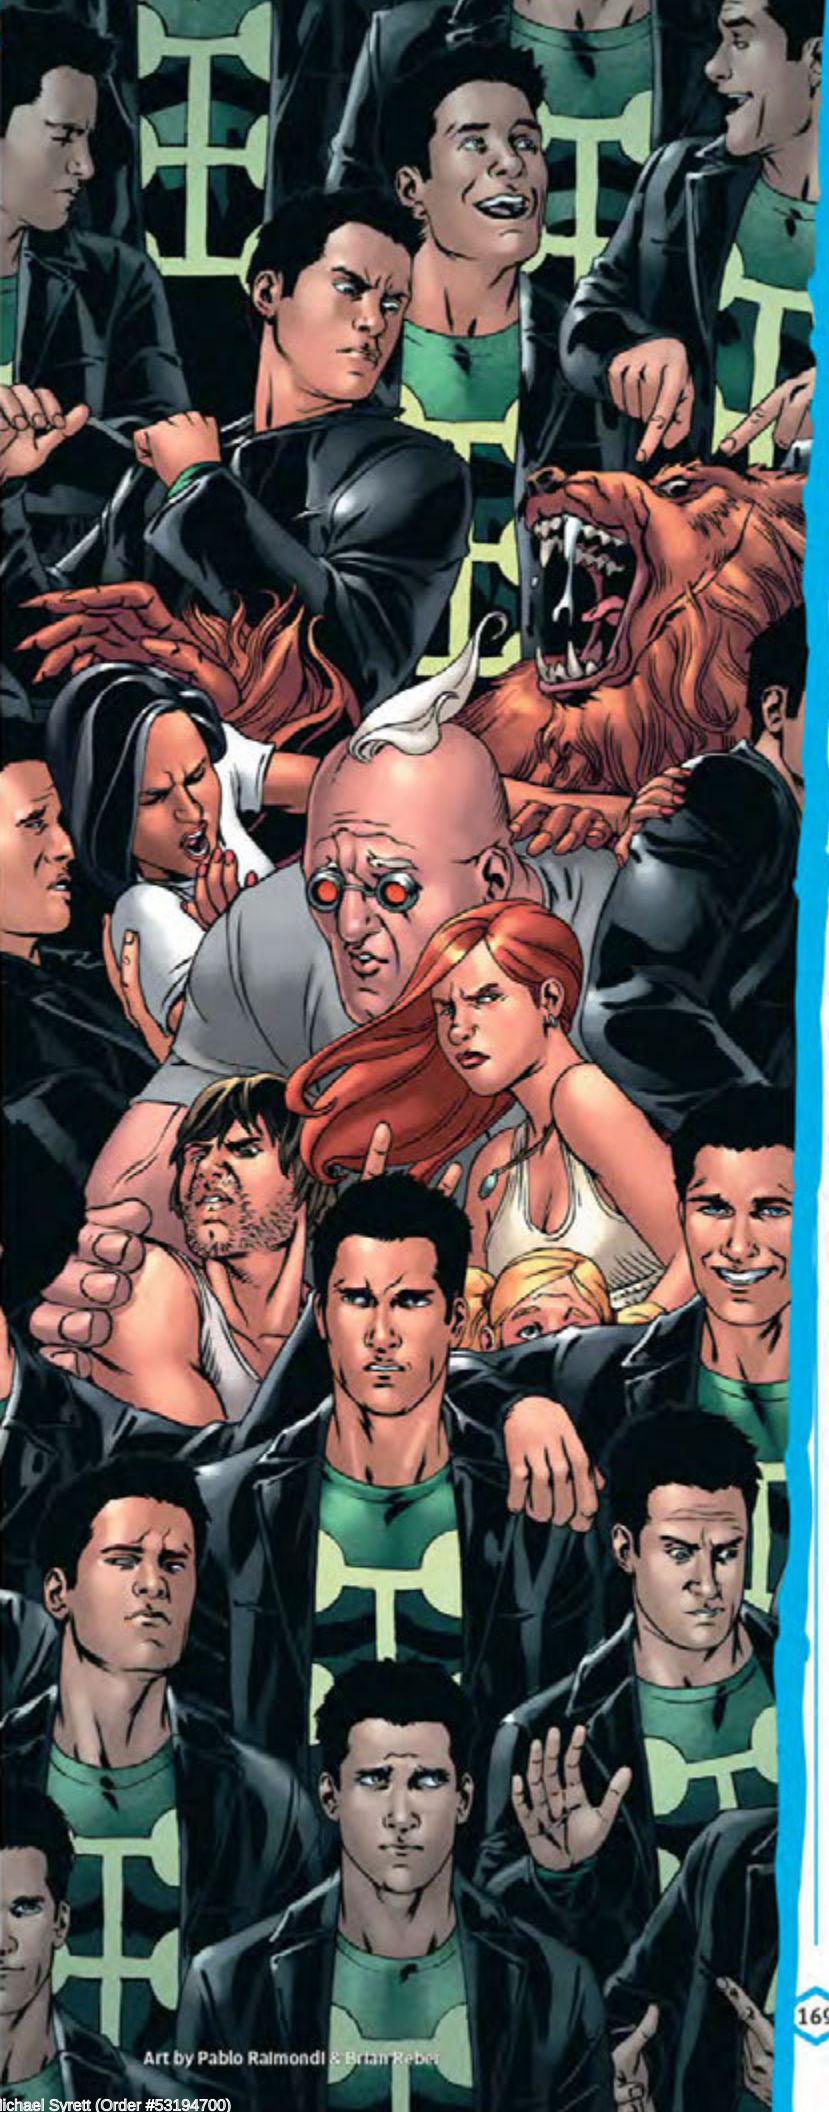
They can also copy DNA from other people and insert it into their body to fool security systems into thinking that they are members of a particular genetic group or family line.

Example: Cassandra Nova

Duplicate Self

With this power the character can make copies of themself. The duplicates are full-fledged, identical copies of the original person, including all of their current clothing. They are indistinguishable from the original, right down to the genetic level.

Michael Syrett (Order - 5319-1700)



Art by Pablo Raimondi & Brian Reber

The number of duplicates a character can have is theoretically unlimited. As a practical matter, though, characters with this power prefer to keep track of their duplicates and don't go to outrageous lengths with their numbers.

While duplicates generally take orders from the character, they are independent people who may balk at doing things they would find painful or distasteful. Often, a duplicate highlights an aspect of the character's personality, for good or bad, so they may act differently than the original would.

There is no limit to the amount of time a duplicate can exist. They can operate entirely independently and can even have their own adventures throughout the Multiverse.

The character has no direct control over their duplicates. They can generally trust them to work together, help the character and execute the character's plans, but there can be exceptions. The character and the duplicates always know who the original character is, although others may have a hard time telling them apart.

The character can absorb their duplicates back into their body. If the character or the duplicate has lost Health or Focus points, the original winds up with the average of their numbers when they absorb the duplicate. Absorbing injured duplicates can harm the character, but the converse is also true. Absorbing healthy duplicates can heal the character.

When the character absorbs a duplicate, they gain all of the duplicate's memories. This includes any tags the duplicate may have gained on their own. In the case of conflicting tags, the character's tags normally take precedence over the duplicate's, although it's up to the Narrator to determine exactly how. On top of that, the character might have to deal with the consequences of their duplicate's actions, for good or ill.

The character cannot absorb the memories of a dead duplicate. Attempting to do so only traumatizes the character, knocking them down to 1 Focus.

The duplicates can also make duplicates, but only the original character can absorb any of the duplicates, no matter their source. Duplicates usually don't mind being absorbed, but some rare ones may refuse to go quietly and may even harbor deep resentment against the character and wish to harm them.

Characters with this power have a trigger that activates it. When the trigger happens—and only when the trigger happens—the power automatically activates, whether they wish it to or not.

Similarly, they must define their trigger to absorb duplicates. When this trigger happens, they must absorb the affected duplicate, whether they wish to or not.

Example: *The trigger for Multiple Man's Duplicate Self power is taking Health damage from being struck. This can be as little as 1 point of damage, and he can inflict it on himself by doing something like banging his hand on a table or wall. He sometimes wears a padded suit to keep this from happening when he does not intend it.*

The trigger for Multiple Man to absorb his duplicates is making skin-to-skin contact with a duplicate. He sometimes wears gloves to keep this from happening when he does not intend it.

Example: Multiple Man

Instant Evolution

The character instantly adapts to any threats against them. They develop new powers or abilities that can protect them from the threat. However, they don't have direct control over how this happens.

For instance, if trapped in a dark room, they develop the ability to see in the dark. If being shot at, their power might give them bulletproof skin, allow them to turn intangible or perhaps break the gun. It's up to the Narrator how the power works in any specific situation.

The power always serves to save the character, but it doesn't care about other people nearby, whether innocent bystanders or the character's best friends. If a bomb is about to go off in a room, for example, this power might make the character bomb-proof or perhaps able to stop the bomb, or it might simply teleport them a safe distance away, leaving everyone else in danger.

Once the specific danger to the character is over, the extra abilities disappear, as they are no longer needed. They never linger, no matter how much the character might want them to.

Example: Darwin

Restart

When the character dies, the entire timeline restarts from the moment of their first consciousness, and they retain the memories from their previous lives. This gives them the chance to start over multiple times, although they have to live through those years in real time.

There may be a limit to the number of times the character can restart, but they might not know it. A character with precognition might be able to tell how many lives are ahead of them—or perhaps just give a range—but there's no way to know for sure. It could be that they'll restart their lives indefinitely, or their present life could be their last one.

There's only so much that one person can do when facing the grand sweep of history, but even one life's knowledge can give a character a huge advantage for improving their personal situation. It's easy to build wealth when you know what the future brings.

This power should be used rarely, if at all. If the players go through an entire adventure only to have the timeline get reset out of the blue, they might feel like they've been cheated. On the other hand, if the point of an adventure is to reset a timeline to prevent a horrible thing from happening, that could transform it from a rug-pull into a moment of triumph.

The Restart power supposedly demolishes the timeline that the previous life took place in. However, that doesn't mean the old timelines no longer exist in the Multiverse. Every time a character with this power dies and restarts, there's a universe out there somewhere in which the character didn't have the power—or one in which the power finally failed—and such places can be reached by those traveling the Multiverse.

Example: Moira MacTaggert

RANDOM ENCOUNTERS

Sometimes heroes go looking for trouble, but just as often, trouble finds them. If they are wandering around, traveling or otherwise out and about, there's a chance that someone or something might complicate their day. That's where random encounters come in.

When to Check

The Narrator decides when to check for a random encounter. When the heroes are traveling safely across the United States by highway, it might be once a day. While they're skulking through the darkest sewers of Manhattan on Halloween, it might be once an hour. Usually it's somewhere in between, like once during the day and once during the night.

In general, the Narrator should check for random encounters only when the action in the game is at a lull. This often happens when the heroes are traveling from one place to another, resting for a period of time or just seeing the sights.

The Narrator doesn't have to make a random encounter check in the moment. If you know the heroes might have some downtime soon, it's fine to make the checks ahead of time and get things ready beforehand. Most of the time, though, such checks are made on the spur of the moment to fill in downtime or to heighten the tension.

For instance, if the heroes are hiding out somewhere, waiting to recover or for something important to happen, that's a good time to make a random encounter check. The Narrator announcing that they're going to make the check puts the players on notice that things can happen to complicate the game at any time, so they'd better get moving.

How to Check

When checking for a random encounter, the Narrator makes a d616 roll against a target number that reflects the likelihood of an encounter happening. The base TN is 13, but the Narrator can set that lower or higher depending on the circumstances.

The lower the target number, the more likely something happens. If the heroes are walking the streets of Manhattan at noon while in their secret identities, for instance, the target number might be 15. If they're skulking through the back alleys of Madripoor at night, it might be 9 instead.

If the Narrator gets a success on the random encounter check, look at the Marvel die and find that result on the appropriate random encounter table.

Example: *The X-Men are wandering Krakoa at night, and the Narrator makes a random encounter check. Because it's dark, they set the target number at 11. The Narrator's roll is 3* ***3*** *6, a total of 12. That's enough for a random encounter! The Narrator consults the Krakoa Encounters table (see below) and sees that a 3 means a mysterious new Krakoan gate has appeared. It's time to get started!*

The Narrator should feel free to create their own custom random encounter tables—or rework the ones here—and tailor them to the game's team to make sure they fit like spandex.

The Tables

The Random Encounter tables are separated by locations where the characters are likely to find themselves. The Narrator should feel free to modify them as needed to best fit their game.

Krakoa Encounters

Marvel Die Roll	Result
Marvel	A squad of Sentinels attack Krakoa to test the nation's defenses. There's one for each character on the team. They fly in from the coast and start blasting away.
2	A group of former villain mutants are drunk down at the Green Lagoon again. There's one of them for each character on the team. They look at Krakoan resurrection protocols as a license to let loose with fatal attacks.
3	A Krakoan gateway the team has never seen before appears, and the field inside the frame flickers as if to beckon the heroes. Does Krakoa want the heroes to go someplace to help someone, or is this a trap planted here by someone else (likely Mister Sinister)?
4	An Arakkii mutant approaches one of the heroes and challenges them to a duel over a matter of honor that they refuse to explain. If the hero does not rise to the challenge, the angry mutant calls them a coward and attacks.
5	A group of wealthy thrill-seekers parachute onto Krakoa, depending on the law against killing humans to protect them. Use the Hydra Agent profile from the *Core Rulebook* for them. They broadcast the entire incident live via social media. The heroes must find and capture them and then escort them off the island in an emphatic but kind way.
6	A mutant the X-Men didn't accept on to the team accosts one of the heroes and tries to beat them in a fair fight, hoping that this can finally prove that they would have been the better choice for the team.

New York City Encounters

Marvel Die Roll	Result
Marvel	A group of super villains decide that taking down a team of mutants would establish them as people to be feared. During a quiet moment, they charge at the heroes and attack. There's one of them at an equal rank for each character on the team.
2	A self-proclaimed citizen journalist spots the team and begins recording them with a phone. They loudly judge the team's every move, and at the slightest provocation they call 9-1-1 and claim that they are being attacked by evil mutants.
3	A young mutant shows up at the team's headquarters, looking for sanctuary, but a group of anti-mutant protesters grab the teenager, claiming that they are going to take the mutant to a doctor for a cure.
4	A group of disaffected Hellfire Club guards (use the Hydra Agent profile) attack the team. There's one for every hero. Perhaps they're still working for Sebastian Shaw, but they claim they're just angry about being kept off Krakoa.
5	Cerebro has detected a new mutant somewhere in New York City. It's up to the heroes to track them down and offer them safe haven. Unfortunately, the mutant's powers have attracted a lot of unwanted attention already.
6	A building is on fire, and there are people trapped on the upper floors. This is a chance for the X-Men to save the day and show the world how helpful mutants can be.

Mutant School Encounters

Marvel Die Roll	Result
Marvel	A Sentinel comes crashing into the school, right through the roof. It was after someone on the faculty, but now that it's found the school, it is content with attacking any other mutants it finds, no matter their age.
2	A group of bullies spy the students and decide to give them a hard time. If this is at the school, they can be fellow students or visitors. Outside the school, they're regular bullies looking for someone strange to pick on.
3	Surprise attack! One of the faculty members leaps out of nowhere and attacks the students. They should always be prepared for such things, and this is (probably) only a test.
4	Outsider alert! Someone from outside the school is here to visit, and all students have to be on their best behavior so the visitor doesn't realize that there's something odd about this place.
5	A young new student arrives at the school and starts lashing out with their powers right away. Create a random Rank 1 mutant and have them begin causing trouble.
6	Training time! The students get thrown into a training session—even the Danger Room, if it's accessible—and must see which of them can last the longest.

CHARACTERS

The X-Men and the rest of the mutants of the Marvel Multiverse have a long and expansive history that goes back more than sixty years. The profiles selected for this book cover a broad range of characters from many different eras spanning that history. They include classic legends and brand-new heroes. If you're an X-Men fan, this chapter features many of your favorites and hopefully introduces you to some new mutants you will come to love too.

MUTANTS, MUTANTS EVERYWHERE

If you can't find your favorite mutant here, look to the *Core Rulebook* next. Many of the most important of Marvel's mutants are featured there.

You can also find a number of mutants in *The Cataclysm of Kang*, including the Fenris Twins (Andrea and Andreas Von Strucker), Gorgon (Tomi Shishido) and Jean Grey.

If looking everywhere else comes up short, make up your own versions of the characters you want. The rules in this book give you all sorts of new options for building profiles for just about any mutant you can think of.

In addition, you can take existing profiles and modify them to represent characters at different points in their histories. For example, Professor Xavier's original class of X-Men were brought forward in time and stuck in the present for a long while at one point. If you want profiles for them, you can take the current profiles for their characters and rebuild them at lower ranks.

RELIANCES

In the *Core Rulebook*, there is a trait called Tech Reliance that covers how powers work when they rely on technology to operate. This book introduces a new trait called Magic Item Reliance.

When a character has a reliance trait, it often affects only some of their powers rather than all of them. The player should make it clear which powers are affected by the trait and which are not.

Published profiles now feature a symbol next to each affected power or power set. The one for Tech Reliance looks like this:

The one for Magic Item Reliance looks like this:

When one of these symbols appears next to a power in a character's profile, it affects that particular power. When shown next to a power set in a profile, it affects all of the character's powers in that set.

Eyes: Blue **Hair:** Blond **Size:** Average
Distinguishing Features: Feathery wings
Occupation: Tycoon
Origin: Mutant
Teams: X-Factor, X-Men, X-Corp

History

From birth, Warren Worthington III wanted for nothing. His natural talents carried him through most of life's troubles, and his parents' wealth dealt with everything else.

Late in Worthington's senior year of high school, his mutant powers kicked in, and two full-size wings spontaneously sprouted from his back. Under the codename of the Angel, Worthington decided to take a crack at emulating the super heroes he admired as a kid and waged a private one-man war on crime.

Angel's solo exploits drew the attention of the fledgling X-Men, who invited him to become a founding member of their organization. He accepted, and he's been in their orbit ever since.

During one of his regular adventures with the X-Men, Angel had his wings ripped from his back. Apocalypse kidnapped the injured Angel and attempted to turn him into a villainous Archangel of Death by brainwashing him and implanting stronger techno-organic wings into his body.

Angel eventually escaped Apocalypse's control and found a way to return to his original form, but the incident left him forever scarred. He can become the blue-skinned Archangel when necessary, but he rarely wishes to do so. These days, Angel spends most of his time far from the field of battle, running Krakoa's X-Corp.

Personality

Angel's natural charisma and stunning looks inspire admiration in some and jealousy in others. When he's not working or adventuring, he lives the life of a wealthy playboy, hanging out with supermodels and relaxing by the pool in his private mansion. However, Angel has no compunctions about using his wealth to help his friends—or the nation of Krakoa itself.

Eyes: Blue **Hair:** Black **Size:** Average
Distinguishing Features: None
Occupation: Adventurer

History

Reed Fox was one of the queer and transgender mutants who answered the call to join the Super Trans support group at the Matt Baker Community Center in Queens.

During the group's first meeting, the center was attacked by a group of super villains seeking to create chaos across the city. Thankfully, with the help of the other members of the support group, Fox managed to send these villains packing before they could do any significant damage.

Having discovered that they enjoyed fighting together, Fox and the other mutants decided to form a more permanent team. Calling themselves the Next Mutants, they now spend their afternoons fighting to keep the streets of New York City safe for people everywhere.

To onlookers, it may appear that Fox simply has the power to freeze things, but this is not exactly the case. Fox can, at will, open a portal to a cold and largely empty universe that exists within their own body. They freeze things somewhat indirectly, by sucking heat out of the environment and into this other universe.

Personality

Fox is the closest thing the Next Mutants have to a team leader. They are, by far, the most eloquent and quick-witted of the group. Whenever the Next Mutants need to send someone forward to negotiate—or to lead them in a call to battle—Fox is the one who steps up

Real Name: En Sabah Nur

Height: 7' **Weight:** 300 lbs. **Gender:** Male

Eyes: Blue **Hair:** None **Size:** Big

Distinguishing Features: Gray-blue skin covered in dark blue markings

Occupation: Adventurer

Origin: Mutant: External

Teams: Externals, Horsemen of Apocalypse, Quiet Council

Base: Mobile

History

One of the first of the modern era's mutants, En Sabah Nur was born in Egypt thousands of years ago. Rejected by his parents as an infant, Nur was taken in by a brutal clan of mercenaries. Life among this clan taught him a single twisted lesson: Might makes right.

As a young man, Nur renamed himself Apocalypse and set out to make himself the most fearsome warrior in the universe. Some years later, he married a female warrior named Genesis and had four children with her. These children each became powerful fighters in their own right, waging war as Apocalypse's Four Horsemen.

Apocalypse's family life came to an unexpected end when his wife and children were sucked through a dimensional portal to a demonic hellscape called Amenth. As a tribute to his lost family, he spent the next several millennia capturing rival super-beings and forcibly transforming the best of them into his new Horsemen.

Not long ago, Apocalypse managed to build a portal to Otherworld—and, by means of that, to Amenth—on the island-nation of Krakoa. The demons of Amenth attempted to invade Krakoa, but the island's defenders pushed them back into their dimension, along with Apocalypse and his family. They recently reappeared when Genesis launched an invasion of Arakko (Mars) from Amenth, with Apocalypse standing against them.

Personality

Despite having a large and studied vocabulary, Apocalypse typically speaks in short, commanding sentences. He cares for little outside of war and family, and in that way, his new life in Amenth seemed an ideal one. He had his kin by his side and unending waves of demonic foes to vanquish as he pleased.

Real Name: Rachel "Ray" Anne Summers
Height: 5'7" **Weight:** 125 lbs. **Gender:** Female
Eyes: Green **Hair:** Red **Size:** Average
Distinguishing Features: Various tattoos
Occupation: Adventurer
Origin: Mutant
Teams: Excalibur, X-Factor, X-Men
Base: Krakoa

History

Rachel Summers was born to Marvel Girl and Cyclops on Earth-811, a dystopian possible future in which most mutants have been herded into camps or outright slaughtered. She was spared from the horrors of the death camps only to face a fate perhaps even worse. Her oppressors made her into a "Hound," a brainwashed government tracker tasked with hunting down members of the mutant resistance.

As a Hound, Summers participated in the capture and execution of dozens of mutants. She eventually broke free of her brainwashing and escaped to Earth-616, but the guilt has stuck with her to this day.

As soon as she arrived on Earth-616, Summers joined the X-Men and worked with them to help ensure that their universe would not go down the same dark path as her own. Although she later managed to return to her home universe and liberate its mutants, Summers still prefers life on Earth-616. These days, she spends most of her time as part of Krakoa's Excalibur team, alongside her girlfriend and longtime teammate, Betsy Braddock.

Personality

Although they are not—strictly speaking—her birth family, Rachel Summers is close with the Earth-616 versions of her mother (Jean Grey), father (Cyclops) and brother (Cable). She lives with them in the Summer House in the Blue Area of the Moon.

Rachel is more like her mother than she would ever like to admit. They are both gifted telepaths and favored hosts for the Phoenix Force. Their personal traumas spring from very different sources, but both Rachel and her mother have fiery and occasionally erratic personalities.

BIOGRAPHY

Real Name: Jeanne-Marie Beaubier
Height: 5'11" **Weight:** 140 lbs. **Gender:** Female
Eyes: Blue **Hair:** Black **Size:** Average
Distinguishing Features: Unusually pointy ears
Occupation: Adventurer
Origin: Mutant
Teams: Alpha Flight, Marauders
Base: Krakoa

History

Jeanne-Marie Beaubier and her brother, Jean-Paul, were just infants when their parents died in a car accident. In the chaos of the aftermath, the twins were sent to different orphanages. Jean-Paul grew up bouncing around the foster system, while Jeanne-Marie spent her childhood in a Catholic boarding school.

The twins had no knowledge of each other's existence until they were well into their adult years after being recruited into Canada's Department H. The moment they grasped hands, their mutant powers activated, and a powerful and blinding light emerged from their bodies, blasting them backward.

The twins decided to use their powers for the betterment of humanity. They joined the Canadian super-team Alpha Flight and spent most of the next decade adventuring together, making up for lost time.

The twins began living separate lives again after the founding of Krakoa drew them away from their Alpha Flight colleagues. These days, Jean-Paul runs Krakoa's X-Factor Investigations team, while Jeanne-Marie serves as a member of the secretive Marauders.

Personality

The sadistic nuns who ran the boarding school where Jeanne-Marie grew up taught her to be demure and obedient the only way they knew how: by beating it into her.

To survive, Jeanne-Marie increasingly had to compartmentalize the freewheeling aspects of her personality. This eventually led to her manifesting a form of dissociative identity disorder, in which she had one uninhibited personality and one well-behaved, repressed personality.

Only recently did she manage to integrate these disparate aspects of herself into a single core personality. The current Jeanne-Marie is both levelheaded and fun-loving.

BIOGRAPHY

Real Name: Sean Cassidy
Height: 6' **Weight:** 170 lbs. **Gender:** Male
Eyes: Green **Hair:** Blond **Size:** Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Mutant
Teams: Generation X, X-Corps, X-Men
Base: Krakoa

History

After serving as an officer for Interpol, Sean Cassidy fell in with a group of nefarious blackmailers who forced him to use his powers publicly for the first time in his life. Luckily for Cassidy, the X-Men managed to free him from these villainous handlers. The X-Men offered Cassidy a position within their ranks, and he eventually took the deal, joining them as a member of their second lineup.

Sadly, Cassidy's time with the X-Men did not last. Weighed down by injuries sustained on the field of battle, he left the organization less than a year into his tenure to focus on spending more time with his daughter, Theresa, who eventually became the hero known as Siryn.

Once his daughter was older, Cassidy returned to the X-Men and ended up dying in action.

The next several years of Cassidy's life—or death, as it may be—were hell. He was resurrected on several occasions, each time by a villain who wanted to use him for their own purposes—and each time being killed again.

He was recently resurrected on Krakoa, to a much happier life.

Personality

In his youth, Cassidy was the stereotypical picture of a romantic, fun-loving, hard-drinking Irishman. He still has some of that spirit in him, but with the traumas he's sustained over the last decade, that part of his personality has become muted.

Cassidy's new world-weary outlook does have a silver lining. He had a long-standing rivalry with his cousin, Black Tom Cassidy, but now that they've gotten older and become a lot more like one another, they've mostly managed to bury the hatchet.

Real Name: Barnell "Barry" Bohusk
Height: 5'9" **Weight:** 140 lbs. **Gender:** Male
Eyes: Black **Hair:** White **Size:** Average
Distinguishing Features: Birdlike physique and appearance, with a beak, talons and feathers
Occupation: None
Origin: Mutant
Teams: New Warriors, X-Men
Base: Krakoa

History
Barnell Bohusk was once an ordinary teenager. Then his mutant powers kicked in.

Practically overnight, his entire appearance changed. His hands and feet curled into talons, and feathers began to sprout all over his body. His skin took on a more wrinkled and pinkish tone, and his bones shrank and hollowed.

Unable to continue a normal life in human society, Beak fled from home and into the welcoming arms of Charles Xavier's school for mutants. It was at this school that he met Angel Salvadore (codename: Tempest), a girl with insectoid powers mirroring his own. They began a whirlwind romance of the highest order. Within a year, they had married and had five kids.

Beak and Tempest have both acted as super heroes from time to time, more out of necessity than a desire to change the world. Neither of them has a particular desire to be part of a battle team, preferring to concentrate on raising their children instead.

Personality
Although he has, on occasion, been manipulated or threatened into committing evil deeds, Beak doesn't have a mean bone in his body. He cares deeply for others, especially those he considers family. After the formation of the nation of Krakoa, he delayed his move there for months so he could take care of his ailing father.

Despite appearances, Beak is actually quite timid and easily embarrassed. Thankfully, his wife is as assertive as Beak is shy. They balance each other nicely.

BIOGRAPHY

Real Name: Lucas Bishop
Height: 6'6" **Weight:** 275 lbs. **Gender:** Male
Eyes: Brown **Hair:** Black **Size:** Average
Distinguishing Features: Tattoo over right eye in the shape of the letter "M"
Occupation: Adventurer, Investigator
Origin: Mutant
Teams: Great Captains of Krakoa, X-Men, X.S.E.
Base: Krakoa

History

Lucas Bishop grew up in a dark possible future (Earth-1191) driven by anti-mutant sentiments. He spent most of his childhood in a mutant concentration camp, watching a combination of poverty and disease slowly consume the lives of his loved ones.

In Bishop's preteen years, a bloody rebellion allowed him to escape the camp. He spent the next several years lying low, and by the time he was an adult, the law had loosened up enough to allow mutants to live freely, albeit in squalor.

Desperate for money, Bishop joined up with the X.S.E., a police squad of mutants charged with arresting powerful mutant criminals. During the pursuit of one such criminal, he stepped through a wormhole and became trapped on Earth-616.

In the hope of preventing his dark future from coming about, Bishop joined up with Earth-616's X-Men. He's been with them ever since.

On Krakoa, Bishop was made the Captain Commander, the person in charge of Krakoa's Great Captains and for overseeing the island-nation's military efforts.

Personality

Bishop enjoys fighting and giving orders but not much else. While he has a reputation as a loner, he has a close and complicated relationship with at least one person: Hope Summers.

Bishop used to believe that Hope Summers was the legendary villain responsible for making his home reality so awful. He spent ages trying to kill both her and her caretaker, Cable (Nathan Summers). Although Bishop has since seen the error of his ways and tried to make amends, his relationships with Hope and Cable remain strained.

Eyes: Variable **Hair:** Black **Size:** Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Magic: Sorcery, Mutant: External
Teams: Externals, Hellfire Club, Quiet Council
Base: Krakoa

History
Selene Gallio is one of the Externals, a group of naturally immortal mutants who share a mysterious psychic connection. She is a psychic vampire who sustains herself on the psionic energy of others. Any human can suffice, but telepaths taste the best.

Few details about Gallio's early life have been confirmed, but her presence in the historical record goes back over 15,000 years. Her first appearance in the modern era dates back to when she turned up in Brazil, posing as a priestess to manipulate the people of Nova Roma—a long-lost Roman colony—into acting as her servants.

The New Mutants uncovered Gallio's plot and drove her out of Brazil, leading her to develop a lasting grudge against them and the X-Men. In the years since, she's spent most of her time working with various villainous organizations to bring the mutant heroes down.

Gallio did declare a temporary truce with her old enemies to obtain a place on Krakoa, but after being denied a spot on the ruling Quiet Council, she called the whole thing off and summoned a giant monster onto the island-nation. Thankfully, the Krakoans put a quick stop to her efforts. Later, she did manage to join the Quiet Council, replacing Mister Sinister.

Personality
If Gallio ever had a heart, it was buried long ago beneath centuries of ruthless murder. The modern Gallio is a creature of pure ego who cares only about herself and advancing her own position in the world. She sees other sentient beings as little more than food, but sometimes she enjoys toying with them before devouring them.

Real Name: Thomas "Tom" Samuel Eamon Cassidy

Eyes: Blue **Hair:** Black **Size:** Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Mutant
Teams: Brotherhood of Evil Mutants, Hellfire Club, X-Force
Base: Krakoa

History

Tom Cassidy and his cousin Sean Cassidy grew up together in the Irish countryside. As boys, the two were inseparable, but as they entered their teen years, they began growing apart. They fought over women, money and anything else they could think of. Eventually, they split for good and set off on two very different paths in life.

Under the codename of Banshee, Sean became a member of the X-Men. Tom, conversely, joined the Brotherhood of Evil Mutants as Black Tom Cassidy.

Black Tom and Banshee spent the next several years floating around within their respective social spheres, only ever meeting up to butt heads. It wasn't until the day of Krakoa's founding as a nation that the pair finally agreed to set their differences aside and work together again.

Black Tom's powers grant him a special affinity with plant life and thus with the island of Krakoa itself. As the head of Krakoan security, he spends most of his time mentally and physically merged with Krakoa, helping the island detect intruders.

Personality

Black Tom used to be the complete opposite of his cousin. Where Banshee was cool and collected, Black Tom was manic and chaotic. Where Banshee was responsible and kind, Black Tom was reckless and cruel.

However, time and distance have slowly brought the two closer in line with each other. Weighed down by years of adventuring, Banshee became less of an active hero, while Black Tom became less of an active villain. The modern Black Tom is a mostly reasonable guy, content with his position on Krakoa.

Distinguishing Features: Pointed ears, bright pinkish-purple skin and hair, several prominent facial markings
Occupation: Adventurer
Origin: Mutant
Teams: Exiles, X-Men

History

Clarice Ferguson grew up in a mutant slave camp in the grim alternate future of Earth-295, a timeline known as the Age of Apocalypse. Sometime in her teenage years, her camp was liberated by her timeline's X-Men, who allowed her to join their ranks.

As Blink, Ferguson spent some time working with those X-Men, but just as their Age of Apocalypse was coming to an end, she was sucked through a freak wormhole into a desolate place between universes. There, an emissary of a mysterious multiversal group called the Timebreakers offered to guide her and several other displaced heroes back to their home universes, but in exchange, he wanted help repairing a number of timelines the Timebreakers had inadvertently ruined.

Blink and the others agreed, forming the Exiles. She enjoyed their adventures together so much that she endeavored to keep the team going even after they were released from the Timebreakers' service. The roster of the Exiles has changed a lot over the years, but to this day, Blink has consistently been their main leader.

Personality

Although Blink was a bit shy in her youth, she long ago grew into her own as a team leader. Today, she is capable and charismatic, both on and off the battlefield. She is a fearless commander, fully willing to confront even gods in the name of justice.

Unlike some team leaders, Blink is far from cold or unemotional. She considers her teammates in the Exiles to be her best friends in the world, and they do the same.

Real Name: Frederick J. "Fred" Dukes

Eyes: Brown **Hair:** Brown **Size:** Big
Distinguishing Features: Unusually large and heavy
Occupation: Entertainer
Origin: Mutant
Teams: Brotherhood of Evil Mutants, Freedom Force
Base: Krakoa

History

As with most mutants, Frederick Dukes' powers began to manifest when he was in his early teens. Almost overnight, he grew from a spry young boy into a hulking mass of flesh and muscle. Shortly thereafter, he fled from home and joined the circus.

Under the pseudonym of "the Blob," Dukes gained worldwide renown as a circus performer. His strange physique drew the attention of the newly formed X-Men, who correctly deduced that he was a mutant.

The X-Men approached Dukes and offered him membership in their organization, but uninterested in a life of heroism, he refused. To preserve their anonymity, the X-Men attacked Dukes and erased his memories of their existence.

This memory wipe did not last long. With the help of the Brotherhood of Evil Mutants, Dukes tried and failed to take his revenge on the heroes who messed with his mind.

Utterly defeated, Dukes returned to the circus. He spent the next several years bouncing between various jobs—and occasionally butting heads with the X-Men—before settling down in a quiet life on Krakoa.

Dukes currently works as the head bartender at the Green Lagoon on Krakoa. He has, for the most part, let go of his resentments toward the X-Men.

Personality

In his youth, Dukes was as much of a diva as a circus performer can be. He was arrogant and gruff, with a short vocabulary and an even shorter temper.

It took years of tribulation for Dukes to mature to where he is today. The modern Dukes is a thoughtful man and a great bartender, always willing to lend an ear or a helping hand. Many of those who live on Krakoa consider him a friend.

Gender: Female
Eyes: Yellow **Hair:** None **Size:** Big
Distinguishing Features: Big, locustlike brown alien with many teeth and tentacles
Occupation: Military
Origin: Alien: Brood
Teams: The Living Armada (Brood fleet)
Base: Mobile

History

The first known Brood came to Earth-616 millennia ago, slipping in through a wormhole created by the death of another universe. The Kree Empire captured them and attempted to turn the insectoid creatures into living weapons for their fight against the rival Shi'ar Empire. The fleet did immense damage to the Shi'ar, but they refused to follow Kree orders. The innumerable Shi'ar ships and outposts the Brood captured spawned a new problem: the Brood Empire.

The Brood Empire's endless quest for power ultimately led them to Earth and its mutant heroes, the X-Men. In an attempt to create super-powered mutant Brood, a Brood Queen captured several of the X-Men and implanted embryos inside them. Although the X-Men eventually defeated the Queen and removed her embryos, the Brood armada as a whole remained a threat.

In the years since, the Brood have made countless attempts to capture Earth and its heroes. Intervention by the new Brood king—Broo—led to a temporary armistice between the Brood and Earth, but no one knows how long this state of affairs can last.

Personality

Brood embryos absorb the thoughts and memories of the people in whose bodies they spawn. Young Brood are driven almost entirely by instinct, while older and more experienced Brood often have minds on par with, if not greater than, humans.

Two desires unite all Brood: to feed, and to obey their biologically designated leader. Broodlings always obey their leader, even if it costs them their lives.

BIOGRAPHY

Real Name: Nathan Christopher Charles Summers
Height: 6'8" **Weight:** 350 lbs. **Gender:** Male
Eyes: Naturally blue, but left eye glows yellow when using powers
Hair: Gray **Size:** Average
Distinguishing Features: Scar over right eye, glowing left eye, Techno-Organic left arm
Occupation: Adventurer
Origin: High Tech: Cybernetics, Mutant
Teams: X-Force, X-Men
Base: Mobile

History
As an infant, Nathan Summers was kidnapped by Apocalypse and infected with the deadly Techno-Organic virus. To save his life, Summers was sent to the dystopian future of Earth-4935, where Apocalypse ruled supreme.

The people of this alternate Earth spent years tutoring Summers in the use of his mutant psychic powers, teaching him to telekinetically halt the advance of the Techno-Organic virus. His training went spectacularly well, allowing him to defeat Apocalypse early in his teenage years.

As a young man, Summers returned to Earth-616 shortly before the Krakoan era to discover that an older version of himself arrived well ahead of him. Summers killed his future self, but helped the Five revive the older version on Krakoa before returning to Earth-4935.

Summers spent the next few decades fighting on Earth-4935, dealing with the aftermath of Apocalypse's reign and slowly becoming that older version of himself. Battle-hardened, he returned to Earth-616 at a point in the timeline near when he had been kidnapped as a baby. During that era, he founded X-Force and participated in countless world-saving adventures—before being killed and revived by a younger version of himself.

Personality
After decades of battle on Earth-4935, Cable became a gruff veteran with a penchant for three things: battling, shouting one-liners and shouting one-liners in battle.

Cable has few close friends or attachments, but he does share a bond with his father (Cyclops), his adoptive mother (Jean Grey) and his adopted daughter (Hope Summers).

Real Name: Unknown
Height: 5'9" **Weight:** 130 lbs. **Gender:** Female
Eyes: Blue **Hair:** Black **Size:** Average
Distinguishing Features: Eyepatch
Occupation: Adventurer
Origin: Mutant
Teams: Hellfire Trading Company, Morlocks
Base: Krakoa

History
As a young mutant, Callisto was attacked by mutant-hating humans, who scarred her and blinded her in one eye. Shortly thereafter, she gave up on trying to live alongside normal humans and took to a life of seclusion in the sewers beneath Manhattan.

Underground, Callisto met with a number of other mutants who had similarly abandoned human society. With Callisto as their leader, these exiles banded together and formed their own society, becoming the Morlocks.

Although initially wary of the X-Men, these Morlocks nonetheless came to assist the mutant heroes on many of their adventures. One of the X-Men—Storm—eventually came to replace Callisto as the de facto leader of the Morlocks.

However, not long after Storm's takeover, the Morlocks were driven from their underground home by a band of evil mutants and slaughtered by the dozens. Callisto was one of the few survivors.

Callisto and the remaining Morlocks spent the next several years drifting around the world until the founders of Krakoa provided them with a new place to settle down. Many of the Morlocks occupy critical positions within the new Krakoan government, with Callisto herself serving as the White Knight of the Hellfire Trading Company.

Personality
Callisto is a proud woman and a born leader. Equally charismatic and stubborn, she has a strong sense of justice and a correspondingly strong distaste for most normal humans.

Although she puts up a tough front, Callisto has a soft spot for the Morlocks and the X-Men, particularly Storm. Callisto and Storm have long been rivals of a sort, but within that rivalry, they share a strong and mutual respect.

BIOGRAPHY

Real Name: Samuel Zachery Guthrie
Height: 6' **Weight:** 181 lbs. **Gender:** Male
Eyes: Blue **Hair:** Blond **Size:** Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Mutant
Teams: New Mutants, X-Force, X-Terminators
Base: Krakoa

History
To make ends meet for his family, young Sam Guthrie had to take a job working in the same rural coal mine that killed his father. On Guthrie's very first day on the job, the mine collapsed, trapping him inside.

Guthrie and every other worker in the mine that day should have died, but the panic of the collapse triggered something deep inside the boy's genes. He grabbed hold of his friends and blasted his way out of the mine.

This act of heroism drew the attention of Professor Charles Xavier, who correctly deduced that Guthrie was a mutant. At Xavier's request, Guthrie became a founding member of the New Mutants, a super-team consisting entirely of teenage mutants.

Guthrie eventually aged out of the New Mutants, at which point he became a founding member of X-Force. Since then, he has continually bounced back and forth between working with X-Force and helping to tutor the newest incarnations of the New Mutants.

When he's not adventuring, Guthrie spends most of his time with his wife, Izzy (A.K.A. the Smasher) and their son, Josiah. Much of that time is spent on Chandilar, throneworld of the Shi'ar Empire.

Personality
Guthrie has seen more action than most super heroes could ever hope to. He has fought in intergalactic wars, traversed alternate dimensions and acted as the leader or co-leader of several important super-teams, but he hasn't let any of it faze him.

Deep down, Guthrie is still a goofy teenager from Kentucky. He likes drinking beer, grilling burgers and chilling with his teammates. Of all his old colleagues, Guthrie is particularly close with Sunspot. They regularly get together on the weekends just to catch up.

BIOGRAPHY

Real Name: Elizabeth "Betsy" Braddock
Height: 5'11" **Weight:** 155 lbs. **Gender:** Female
Eyes: Violet **Hair:** Blond, currently dyed purple
Size: Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Magic: Sorcery, Mutant
Teams: Captain Britain Corps, Excalibur, Knights of X
Base: Krakoa

History

Not long after her twin brother, Brian, first took up the mantle of Captain Britain, Betsy Braddock began to manifest powers of her own. Her psychic abilities and excellent reflexes made Betsy an ideal stand-in for her brother and, soon enough, there were two Captain Britains protecting the United Kingdom.

Tragically, this state of affairs did not last. Betsy was kidnapped by the otherworldly villain Mojo and brainwashed into becoming the treacherous psychic assassin Psylocke. To complicate matters further, soon after Betsy escaped Mojo's programming, she was forced into a body-swap with an actual professional assassin named Kwannon.

Her mind having partially merged with Kwannon's, Betsy spent most of the next decade in a spiritual and mental confusion, unsure of her purpose in life. As Psylocke, she was both an ally and an enemy to all around her.

Only recently did Betsy manage to regain control of her original body and resume her place as Captain Britain. With Brian having become the super hero Captain Avalon, Betsy is the sole holder of the Captain Britain title. She has taken on a vital leadership role in the defense of both Krakoa and Otherworld.

Personality

Betsy Braddock is as much of a serious and stoic warrior as her brother, if not more so. She's a focused commander with no patience for small talk or joking around on the battlefield.

Outside of battle, Betsy can be charismatic and thoughtful. She's had whirlwind romances with other heroes over the years, having most recently started a relationship with Askani (Rachel Summers).

Real Name: Cassandra Nova Xavier
Height: 5'4" **Weight:** 115 lbs. **Gender:** Female
Eyes: Blue **Hair:** None **Size:** Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Mutant; Monstrous: Mummudrai
Teams: Marauders
Base: Krakoa

History

Cassandra Nova Xavier—or Cassandra Nova, as she is often called—is Professor Charles Xavier's long-lost evil twin. She formed alongside him in the womb, and Charles—sensing her terrible nature—attempted to strangle her. A few of her still-living cells escaped the womb and fell into a nearby sewer. They spent the next several decades festering on a dirty wall, growing a full body.

Nova finished re-forming on a bright summer morning. By that afternoon, she had destroyed the nation of Genosha and killed an estimated sixteen million mutants.

The X-Men put an end to her genocide as quickly as they could, but the damage had been done. Nova spent much of the next several years imprisoned by the X-Men. In exchange for promises of reform, she was allowed to go free, though she remains under strict surveillance. Only now, with the activation of Krakoa's resurrection protocols, has mutant society finally begun to recover from the damage she caused.

Just about everyone on Krakoa distrusts or outright hates Nova. She has been allowed to claim Krakoan citizenship and even join the Marauders, but no one likes having her around. She was eventually abandoned billions of years in the past on a mission with the Marauders.

Personality

Although Nova and Professor X operate along different moral lines, Nova speaks in a similar manner to her brother. She is eloquent, straightforward and even polite. It's just that she hates everyone.

Xavier has dedicated his life to preserving mutantkind, while Nova has dedicated her life to annihilating it. That's the key difference.

Real Name: Jonothon "Jono" Evan Starsmore
Height: 5'9" **Weight:** 140 lbs. **Gender:** Male
Eyes: Brown **Hair:** Brown **Size:** Average
Distinguishing Features: Chest and lower face composed of a mysterious psionic energy
Occupation: Adventurer
Origin: Mutant
Teams: Generation X, Legionnaires, Morlocks, New Mutants, New Warriors, X-Men
Base: Krakoa

History

Jonothon Starsmore's X-Gene activated shortly after his eighteenth birthday. On that day, a fiery ball of pure psionic energy formed within his chest and grew until it had nowhere else to go but out. The resulting explosion annihilated most of Starsmore's body and permanently disabled his girlfriend. He should've died that day, but the psionic energy refused to let him go. It became his new body, filling in the spaces it had destroyed.

Permanently disfigured and unable to face the guilt of having hurt his girlfriend, Starsmore left home. He accepted an invitation to Charles Xavier's School for Gifted Youngsters and subsequently became a founding member of the super-hero team Generation X.

Generation X eventually disbanded as its members aged out of Xavier's school, but Starsmore never stopped being an active super hero. Over the ensuing years, he has served as a member of the Morlocks, the New Warriors and even the X-Men themselves.

On Krakoa, Starsmore split his time between acting as a member of Nightcrawler's Legionnaires group and helping his old Generation X teammate Jubilee raise her adopted son, Shogo.

Personality

Chamber could be an exceptionally powerful hero, but the guilt he feels over his past keeps him from using his powers to their fullest extent. The explosive psionic energy within his chest fluctuates with his emotions, and outside of the battlefield, he tries to maintain a relatively calm and simple lifestyle. He has a big and loving heart, but for obvious reasons, romantic entanglements are difficult for him.

Real Name: Douglas Aaron "Doug" Ramsey
Height: 5'9" **Weight:** 150 lbs. **Gender:** Male
Eyes: Blue **Hair:** Blond **Size:** Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Mutant
Teams: New Mutants, Quiet Council
Base: Krakoa

History

Shadowcat (Kate Pryde) had long suspected that her childhood friend Doug Ramsey—with his uncanny knack for codes and languages—was some kind of mutant. However, for the sake of his safety, she rarely involved him in mutant business. Then the alien mutant Warlock crash-landed near Xavier's School for Gifted Youngsters and fought the original New Mutants. To communicate with the rampaging Warlock, Pryde was forced to enlist Ramsey's assistance.

Ramsey and Warlock became fast friends and decided, almost simultaneously, to become members of the New Mutants, with Ramsey taking the codename Cypher. As Cypher, Ramsey proved a capable member of the team, but his time with the New Mutants was cut short when he was killed in battle, taking a bullet meant for Wolfsbane.

Years later, the Black Priestess (Selene Gallio) resurrected Ramsey. He rejoined the New Mutants for a while, but his heart was no longer with the team. Eventually, he retreated to the edges of mutant society, only returning to the spotlight after being persuaded to assist in the foundation of Krakoa. Cypher served as the Quiet Council's liaison with the island of Krakoa itself, until instability within the nation led the island to swallow him up, supposedly for his own protection.

Personality

Cypher may not have flashy energy blasts, but he is more intelligent, more courageous and more empathic than more aggressive super heroes. His omni-linguistic abilities allow him to stop many fights before they even start.

Though he has dozens of friends, Cypher is particularly close with Warlock. At times, they have merged to form a single powerful being called Douglock.

Biography

Real Name: Armando Muñoz

Height: 6'4" **Weight:** 150 lbs. **Gender:** Male

Eyes: No irises **Hair:** None **Size:** Average

Distinguishing Features: None

Occupation: Adventurer

Origin: Mutant

Teams: X-Factor, X-Men

Base: Krakoa

History

Unable to cope with their mutant son's strange appearance, Armando Muñoz's mother sent him off to boarding school, and his father left the family altogether. Muñoz was bullied relentlessly by his fellow students, and the adults in his life treated him little better. They endlessly studied his strange abilities and eventually began to publish papers on his powers.

These papers brought Muñoz to the attention of Moira MacTaggert, who invited him to the Xavier Institute, where he could learn to use his powers alongside other young mutants. Muñoz was among the ill-fated first group of mutants sent to retrieve the original X-Men from Krakoa. The mission was a disaster, with most of the untested team killed and the rest blasted into orbit. Muñoz only survived by merging himself with his teammate Vulcan.

It took years for Muñoz and Vulcan to return to Earth and separate. The experience drove Vulcan half insane, but Muñoz coped better. He rejoined the X-Men and later accepted a position with X-Factor Investigations.

Early in the Krakoan era, Muñoz and a handful of other X-Men were trapped inside a time bubble called the Vault. Muñoz seemingly died during this incident, and a replica of him was resurrected on Krakoa. However, a later investigation revealed that his mind had survived by merging with the Vault's computers.

Personality

Darwin can adapt to handle just about anything, but that doesn't mean he always enjoys every situation. He's a soft-spoken guy who would generally prefer a simple night at home to an adventure across the cosmos.

In that way, merging with the Vault was good for him. As a digital construct, he has endless time to relax and experiment. His newer version lives on in his stead.

BIOGRAPHY

Real Name: Alison "Ali" Blaire
Height: 5'8" **Weight:** 115 lbs. **Gender:** Female
Eyes: Blue **Hair:** Blond **Size:** Average
Distinguishing Features: None
Occupation: Entertainer
Origin: Mutant
Teams: Excalibur, S.H.I.E.L.D, X-Men
Base: Krakoa

History

During a performance at a high-school talent contest, Ali Blaire's body began to emit dazzling lights. These lights helped Blaire not only wow her classmates but also drive off a group of rowdy bikers who attacked her school later that same night.

The incident left such an impact on Blaire that she rededicated herself to achieving her childhood dream of becoming a successful singer. She left home and got a regular gig performing at a club under the stage name of Dazzler.

Blaire's fantastic, superhuman performances quickly drew the attention of mutant groups, both good and evil, who tried to recruit her into their ranks. Although she was initially uninterested in a life of adventure, her innate sense of justice and her impeccable knack for getting into tricky situations inevitably drew her into a life of super-heroics.

Over the years, Blaire has been a valued member of both the X-Men and S.H.I.E.L.D. She's currently put most of her regular heroics aside to focus on her music, but she still finds the time to lend a helping hand now and again. Her son, Shatterstar, and her one-time husband, Longshot, are important mutant heroes in their own rights.

Personality

Frequently hailed as the world's greatest mutant performer, Blaire's presence on stage is positively electric. It would be easier to count the mutants on Earth who haven't, in some way, been charmed by her.

However, like a lot of stars, her life offstage is often a wreck. She considers herself lucky if she can get through a night with friends without getting caught up in one adventure or another.

BIOGRAPHY

Real Name: Irene Adler
Height: 5'7" **Weight:** 110 lbs. **Gender:** Female
Eyes: Gray-white irises due to blindness
Hair: Brown **Size:** Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Mutant
Teams: Brotherhood of Evil Mutants, Quiet Council
Base: Krakoa

History

Born into a noble family during the late Victorian era, Irene Adler enjoyed a quiet and privileged upbringing. Then, at the age of 13, her precognitive powers suddenly activated. She spent the next thirteen months in a delirious haze, transcribing the details of every possible future she could see. The effort eventually drove her blind.

Years later, Adler hired a detective named Raven Darkhölme (Mystique) to help make sense of her scribbled predictions. The pair hit it off and quickly became partners, first in the detective business and then, later on, in love.

They had a child, Nightcrawler (Kurt Wagner), who tragically disappeared shortly after his birth. Decades later, they adopted a young Rogue (Anna Marie LeBeau) as their surrogate daughter.

Determined to fight for the rights of mutantkind, Destiny, Mystique and Rogue helped found major incarnations of both the Brotherhood of Evil Mutants and Freedom Force. However, toward the end of Freedom Force's tenure, Destiny died in battle.

Recently, and in spite of a secret ban on the resurrection of precogs on Krakoa, Mystique tricked the Five into reviving Destiny in a younger body. She and Mystique have spent most of the period since working closely together, making up for lost time.

Personality

Destiny's ability to predict the future grants her the confidence to tackle just about any situation—confidence that is, more often than not, justified. She has a mind for planning ahead, which makes the greatest human tacticians in the world look like children playing checkers.

If she has a flaw, it is a penchant for being overly protective of her family. She wouldn't hesitate to trade the lives of every last human on Earth if it increased the chances of Rogue and Mystique living a few extra years.

BIOGRAPHY

Real Name: Neena Thurman
Height: 5'8" **Weight:** 120 lbs. **Gender:** Female
Eyes: Blue **Hair:** Black with white streak
Size: Average
Distinguishing Features: Unnaturally pale skin with a black "domino" tattoo over left eye
Occupation: Adventurer
Origin: Mutant
Teams: X-Force
Base: Krakoa

History
Tossed out of a twisted Super-Soldier program for being insufficiently powerful, Neena Thurman grew up in a stifling church orphanage without any knowledge of her background or her mutant status. A delinquent at heart, she ran away in her teenage years to make a name for herself as a mercenary.

She spent some time working for the National Security Agency, where her uncanny ability to tip the odds in her team's favor earned her the codename Domino. After bouncing between a few other organizations, she found true companionship for the first time as a part of the Wild Pack, a mutant mercenary group run by Cable. Domino and Cable struck up a brief romance, and though it ended poorly, she eventually agreed to join Cable in his next venture, X-Force.

Since then, Domino has consistently been a key member of X-Force. Although she has occasionally left the team to engage in independent mercenary work, she always finds a way back. Of the original X-Force lineup, Domino was the only one still on the team in the Krakoan era. Few mutants can credibly claim to have seen as much field combat as her.

Personality
Personality

Above all else, Domino is a thrill seeker, and her mutant luck means that she can comfortably seek thrills that would certainly kill anyone else. Her comfort zone lies somewhere between dodging bullets and jumping from an airplane without a parachute.

Despite the insanity of her life, Domino is not a jaded and hardened mercenary like Cable. She's lively, sociable and an ideal party guest.

BIOGRAPHY

Real Name: Unknown
Height: Varies, usually 3'
Weight: Varies **Gender:** Male
Eyes: Red **Hair:** None **Size:** Small
Distinguishing Features: Legless green creature resembling a large, fat pickle with arms
Occupation: Outsider
Origin: Alien: Marginalian
Teams: X-Statix
Base: Mobile

History

No one knows for sure where Doop came from, not even Doop. He grew up in the mysterious dimension of Marginalia, a place that exists outside of space and time, metaphorically in the margins of comic-book pages themselves.

Some say that Doop was the result of top-secret experiments performed by the U.S. military in the eighties. Others claim Doop spawned entirely from the imagination of an anonymous hospital orderly who scribbled the first known image of the creature in the margins of a screenplay written by film director Ingmar Bergman.

Whatever the truth may be, Doop spent his formative years believing that Ingmar Bergman was his creator. Out of respect for the director, Doop began practicing the art of filmmaking. Eventually, he lucked into a videography job with the private, for-profit X-Statix super-hero team.

Doop is the only member of the original X-Statix lineup still with the team. All the others either died or abandoned the group long ago, but Doop remains steadfast, always watching from the background, recording every movement.

When not with X-Statix, Doop mingles with mutants of all kinds. He once even served as a receptionist at the Jean Grey School for Higher Learning.

Personality

Doop has powers beyond comprehension, but he rarely uses them to their fullest extent. He does not want to make himself the subject of his own movies, preferring instead to let his teammates in X-Statix speak for themselves.

Although he can speak English, Doop usually talks in an unintelligible tongue unique to him. Doop typically identifies as male, but his species lacks most human conceptions of gender and sex. They reproduce asexually, like amoeba.

BIOGRAPHY

Real Name: Sooraya Qadir
Height: 5'6" **Weight:** 136 lbs. **Gender:** Female
Eyes: Brown **Hair:** Brown **Size:** Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Mutant
Teams: Champions, X-Men
Base: Mobile

History

When she was just a teenager, Sooraya Qadir was taken from her home in Afghanistan and sold to a group of mercenary slavers. Thankfully, she would not have to suffer in their clutches for long.

One night, before bed, Qadir made a wish upon a star. She prayed to be turned into a cloud so that she might float away from her life in captivity. She awoke to find that her wish had been granted and that the winds had already carried her halfway to the Afghan/Pakistani border. The mutant hero Wolverine (Logan) spotted Qadir trying to cross the border and, correctly deducing that she was a mutant, offered to take her to Charles Xavier's School for Gifted Youngsters in America. Qadir took the deal and spent the next few years studying at Xavier's facility, making friends and learning how to utilize her powers.

After graduation, Qadir joined up with the teen super-hero group known as the Champions. These days, she splits her time between acting as a backup member of the Champions and helping out her old friends on Krakoa.

Personality

Qadir is a focused combatant and a capable commander, both on and off the field of battle. She speaks clearly and loudly, drawing her teammates toward the positions where they would be the most useful. She isn't the type to goof off or joke around.

In accordance with Islamic tradition, Qadir wears an abaya dress with a niqab veil at almost all times. However, she observes this tradition less out of a sense of religious devotion and more out of a sense of fashion. She thinks the dress makes her look humble and distinguished.

Real Name: Joshua "Josh" Foley
Height: 5'9" **Weight:** 157 lbs. **Gender:** Male
Eyes: Blue **Hair:** Blond **Size:** Average
Distinguishing Features: Skin shifts from peach to gold to pitch black depending on power usage
Occupation: Adventurer
Origin: Mutant
Teams: The Five, New Mutants, Reavers
Base: Krakoa

History

Josh Foley was once a dedicated member of an anti-mutant militia called the Reavers. Then one day, in the midst of a battle with the X-Men, he suddenly gained mutant healing powers. Although Foley's new powers allowed him to save the lives of many of his fellow Reavers, his friends, his handlers and even his parents all abandoned him when they realized he was a mutant.

Left with no other options, Foley fled into the hands of his former enemies. He enrolled in Xavier's School for Gifted Youngsters and, despite some initial discomfort, quickly earned a respected place within the student body. Under the codename Elixir, Foley joined the New Mutants, where a near-death experience led him to develop a secondary mutation. Whenever Elixir uses his powers to heal, his skin turns gold, but when he uses them to harm others, his skin turns black.

Elixir's ability to heal others at a moment's notice made him a critical figure in many of the X-Men's darkest chapters. He was a frontline medic in the chaos that ensued after M-Day, and at times, he has served as medical backup for both X-Force and the X-Men proper. As a member of the Five, Elixir helped to resurrect dead mutants on Krakoa.

Personality

Elixir was an awkward, strongheaded and occasionally broody teenager. As a former anti-mutant bigot, it took him a while to acclimatize to life in mutant society.

The modern Elixir is much more soft-spoken and even-tempered. His work with mutant teams taught him the importance of relying on others—and of being there when others need to rely on him.

BIOGRAPHY

Real Name: Shela Sexton
Height: 5'9" **Weight:** 175 lbs. **Gender:** Female
Eyes: Green **Hair:** Red, with dyed blue tips
Size: Average
Distinguishing Features: None
Occupation: Adventurer
Origin: High Tech, Mutant
Teams: New Mutants
Base: Krakoa

History

Shela Sexton discovered her powers, as most mutants do, in her teenage years. With concentrated effort, she could instantly swap positions, clothes, abilities and even appearances with other people. For a few hours a day, she could become anyone, even her high-school principal, with nobody else the wiser.

Sexton eventually revealed her mutant status to her parents, a status they readily accepted. They were much less accepting of her status as a transgender woman.

Sexton's parents kicked her to the curb, forcing her to move in with her longtime best friend, Morgan Red. Then, with the help of some of Morgan's high-tech gadgets, she set out to become a hero of the people, using her powers to target the rich and powerful.

After the founding of Krakoa, Sexton reluctantly agreed to move to the island and become part of the New Mutants. She's made friends among the team, but as an avowed anti-nationalist, she remains skeptical of the whole Krakoa project. She's done her best to direct the New Mutants toward her mission of taking down the world's oligarchs.

Personality

Sexton is typically a funny and upbeat person, with a healthy suspicion of authority. Few things can really shake her, but the ones that do shake her hard. It's extremely difficult for her to confront situations where she feels her loved ones, particularly Morgan Red, may be in danger.

The move to Krakoa has put new strains on Sexton and Red's friendship, but they still remain the most important people in each other's lives. Red accompanies the New Mutants on many of their adventures.

Real Name: Bennet du Paris
Height: 5'10" **Weight:** 165 lbs. **Gender:** Male
Eyes: White **Hair:** Black **Size:** Average
Distinguishing Features: No pupils, unnaturally bright red skin
Occupation: Outsider
Origin: Mutant
Teams: Acolytes, Brotherhood of Evil Mutants, Quiet Council
Base: Krakoa

History
Knight Templar Bennet du Paris and his best friend, Eobar Garrington, entered the Sahara Desert on a quest to find the mythical Egyptian Tower of Power. They eventually found the tower, only to be taken captive by its sole inhabitant: Apocalypse.

Apocalypse unlocked du Paris' latent mutant powers, transforming him into Exodus. He then promised Exodus further power—beyond his wildest dreams—but first, he had to prove his loyalty by killing his friend, Garrington.

Exodus refused, and as punishment, Apocalypse entombed him within the Tower of Power. He spent the next one thousand years there in a state of living death, until Magneto happened upon Exodus and freed him.

Out of gratitude, Exodus joined Magneto's then-current terrorist group: the Acolytes. Exodus and the Acolytes worshiped Magneto as a living messiah until he was eventually defeated.

Exodus spent the next several years wandering from group to group, sometimes acting as a hero, sometimes as a villain, always on the lookout for a new purpose. The founding of Krakoa gave him everything he ever dreamed of.

As a member of the Quiet Council, Exodus became Krakoa's biggest advocate. He believes the island is paradise on Earth and that Hope Summers, the leader of the Five, is the mutant messiah he was always waiting for.

Personality
Although Exodus has spent most of his time as a villain, he does not have a vicious nature. He is an extremely pious individual, one who sees violence as a regrettable means toward righteous ends, not an end in itself. Ideologically, he has more in common with Magneto than Mister Sinister.

History
After World War II, Wolverine (Logan) moved to a small village in the Japanese countryside, where he met and married a local villager named Itsu. She was on the verge of giving birth to their child when the mutant warlord Romulus ordered her assassination, which was carried out by the then-brainwashed Winter Soldier.

Unaware that his child had survived, Wolverine left Japan, and the infant was taken in by a local couple who named him Akihiro. The couple was rich but cold, and they treated his burgeoning powers with disdain. The local kids treated him no better, bullying him with calls of "Daken," the Japanese word for mongrel.

In a fit of teenage rage, Akihiro killed his adoptive mother. He took on the codename Daken and fled into the custody of Romulus to begin training as an assassin. Unaware that his mentor had ordered his mother's murder, Akihiro spent years working as a hit man for Romulus. These missions eventually brought him into contact with Wolverine, who showed his long-lost son the truth.

Together, Akihiro and Wolverine defeated Romulus. Although Akihiro returned to assassination work for a while, Wolverine's heroic spirit slowly rubbed off on him. He eventually took on a new codename—Fang—and joined Krakoa's Marauders in their efforts to save mutant refugees.

Personality
Much like his father, Fang is prone to going berserk. He fights with a combination of rage and raw instinct. In his youth, he spent nearly every moment on the edge of a murderous frenzy. As he's gotten older, he has developed a soft spot for a select few people—in particular, the other members of the Wolverine family.

History

In an attempt to speed up normal evolutionary processes, scientists working for the secretive Weapon Plus program created the World: a captive community of ordinary people sealed inside an accelerated-time bubble. The theory was that, with enough time, the inhabitants of the World would naturally produce a powerful mutant, one whom the program's shady government financiers could weaponize.

The World did indeed produce a powerful mutant—just not one Weapon Plus could control. One day, out of the blue, a man calling himself Fantomex broke free of the World. He immediately outwitted his captors and escaped, fleeing into the custody of the X-Men.

Fantomex spent the next several years working alongside the X-Men to utterly dismantle the Weapon Plus program. He battled leagues of evil mutants, boatloads of hideous monstrosities and even clones of himself, all on his way to destroy the program once and for all.

Then, just as suddenly as he arrived, Fantomex was gone. Shortly after the founding of Krakoa, he re-entered the World on a quest to defend the people he had left behind. No one on the outside has seen him since.

Personality

Fantomex prides himself on his ability to fade into the background, to create new identities for himself and to be as stealthy as he is deadly. He spends most of his time inside a full-body suit that conceals everything except his eyes.

Fantomex is generally a rather gruff and hyper-focused individual. He does, however, have a soft spot for E.V.A.—a flying, intelligent, Techno-Organic ship spawned from his own nervous system. Whatever she feels, he feels too.

BIOGRAPHY

Real Name: Remy Étienne LeBeau
Height: 6'2" **Weight:** 179 lbs. **Gender:** Male
Eyes: Red **Hair:** Brown **Size:** Average
Distinguishing Features: Black eyes with red irises
Occupation: Adventurer, Criminal
Origin: Mutant
Teams: Excalibur, Thieves' Guild, X-Men
Base: Mobile

History

After being rejected by his biological parents, infant Remy LeBeau was adopted by members of the international criminal organization known as the Thieves' Guild. LeBeau quickly took up the profession of his caretakers, and by the time he was a young man, he had become one of the greatest thieves on the planet.

In the midst of one heist, LeBeau encountered the mutant hero Storm in a vulnerable position, having been de-aged into a child by agents of the Shadow King. Having once been a vulnerable child himself, LeBeau helped Storm defeat the Shadow King, and she, in return, invited him to join the X-Men.

Although he was not as invested in mutant politics as his colleagues, LeBeau found life among the X-Men thrilling and rewarding. As Gambit, he spent years adventuring alongside the mutant heroes, all the while romancing his teammate Rogue.

Shortly before the foundation of Krakoa, Gambit and Rogue finally got married. Although they acted as backup members of Krakoa's Excalibur team, Rogue and Gambit have spent most of their time since their marriage focusing on each other and adventuring together across the globe.

Personality

In his younger years, Gambit was known as a smooth-talking ladies' man. As a married man, he's not as much of a flirt as he used to be, but he's still a notoriously persuasive and charming individual. He speaks in a thick New Orleans accent and often peppers bits of Cajun French into his regular English speech.

Real Name: John Greycrow
Height: 6'6" **Weight:** 175 lbs. **Gender:** Male
Eyes: Gray **Hair:** Black **Size:** Average
Distinguishing Features: Various cybernetic attachments
Occupation: Assassin
Origin: High Tech: Cybernetics, Mutant
Teams: Hellions, Marauders
Base: Krakoa

History

Despite being an experienced combat veteran, John Greycrow was nearly unknown in the mutant community until he joined the mercenary squadron known as the Marauders. There, Greycrow forged the fledgling team into a lethal force capable of rivaling a small military and set them to work.

On orders from Mister Sinister, Greycrow and his band tracked down the Morlocks, a society of mutant rejects living in the sewers beneath New York City. In an event known as the Mutant Massacre, Greycrow's Marauders slaughtered nearly every Morlock.

The X-Men tracked Greycrow down and executed him, but the damage had been done. In the coming years, his name became synonymous with the term "mass murderer."

Greycrow was eventually resurrected by the Krakoan government, but only so they could make him part of the new Hellions: a secret strike team of former villains. Ironically, being forced to work as a hero finally led Greycrow to regret his life as a villain.

Greycrow knows he can never atone for his past, but now that his sentence with the Hellions has been served, he hopes to live out the rest of his days in relative peace.

Personality

Although he might appear to be nothing more than another serious, hard-talking, cigar-smoking merc, Greycrow has some deep insecurities hidden within his psyche. He became a killer not out of a love of violence, but because he believed that it was the only thing a person as worthless as him could be any good at.

BIOGRAPHY

Real Name: James MacDonald Hudson
Height: 6'2" **Weight:** 225 lbs. **Gender:** Male
Eyes: Brown **Hair:** Black **Size:** Average
Distinguishing Features: None
Occupation: Adventurer
Origin: High Tech: Cybernetics
Teams: Alpha Flight, Omega Flight, RCMP
Base: Ottawa

History

Canadian patriot James Hudson got sucked into the world of super heroes while working for a multinational oil conglomerate. Hudson developed an exosuit that would allow workers to safely and easily search for oil underground. Rather than using this suit for its intended purpose, Hudson's employers attempted to steal his designs and sell them to the American military.

As quickly as he could, Hudson blew the whistle on his bosses and fled into the custody of the Canadian government. The government offered Hudson their complete protection, on the condition that he use his suit in the defense of Canada.

Under the codename Guardian, Hudson worked with the government to form a super-team capable of defending Canada against any threat. He called this team Alpha Flight.

Almost continuously since then, Hudson has been the leader of Alpha Flight. He's had to install a number of cybernetic implants in himself over the years to keep up with the times, but his commitment to Alpha Flight—and to Canada—has never been in question.

Personality

Guardian represents the ideals of Canada in the same way that Captain America represents the ideals of the United States. He's soft-spoken, strong, and, above all, kind to those around him.

Hudson's unflinching loyalty to the Canadian government has, on occasion, led him astray, but in the end, his commitment to justice always puts him back on the right track.

Although he is not a mutant, many of Hudson's teammates are, and he often gets mixed up in the world of mutant politics. The mutant hero Wolverine (Logan) was among the earliest members of Alpha Flight.

BIOGRAPHY

Real Name: Alexander "Alex" Summers
Height: 6' **Weight:** 175 lbs. **Gender:** Male
Eyes: Blue **Hair:** Blond **Size:** Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Mutant
Teams: Avengers Unity Division, Hellions, X-Men
Base: Krakoa

History

As a young boy, Alex Summers and his brother Scott were on their family's small plane when it was attacked by an alien spacecraft. Alex got away largely uninjured, but Scott spent the next several years in a coma. The brothers were not reunited until they were well into their adult years. By that point, Alex had become a budding geophysicist, while Scott had become Cyclops, the leader of the X-Men.

Despite his desire to live a normal life, Alex increasingly was drawn further from his studies and closer to the mutant society his brother inhabited. Soon enough, Alex displayed powers of his own—powers that mirrored those of his brother.

Alex spent the next several years, on and off, as backup for Scott and the other X-Men. He's fully capable of taking Scott's place as team leader, but he prefers to spend most of his time in the background and let his brother handle the more serious threats.

Following the founding of Krakoa, Alex agreed to take on a supervisory role with the Hellions, a group composed largely of former super villains.

Personality

Unlike his brother, Alex has never felt he was meant for super-heroics. He would like nothing more than to live a quiet life in the countryside with his loved ones, but his obligations to the world—and to his brother—have kept him from achieving that dream.

At this point, Alex has come to accept that adventuring will be a permanent aspect of his life, but he's not always happy about it. He's currently in a long-term relationship with Madelyne Pryor (A.K.A. the Goblin Queen).

Eyes: Green **Hair:** Red **Size:** Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Mutant
Teams: The Five, X-Force, X-Men
Base: Krakoa

History

As the first mutant to be born after M-Day, Hope Summers had a target on her back from the moment she opened her eyes. Her parents were killed just days after her birth, a fate from which only the intervention of Cable spared her. Cable and Hope spent the next several years on the run, avoiding potential assassins by hiding out in different points in the timestream. By the time the pair returned to the present, Hope had grown into a mature and combat-ready teenager.

After taking on the power of the Phoenix, Hope gave it up to help repower the planet's mutants. Later, as part of the Five, she helped establish Krakoa's resurrection protocols, causing Earth's mutant population to explode.

As the head of the Five, Hope was responsible for imbuing the spark of life into every resurrected mutant. From her seat on Krakoa's governing Quiet Council, she represented the interests of the Five as a whole.

Hope's legendary status as a life-giving mutant has led many mutants to treat her with reverence. The most fanatical of her admirers believe her to be the "Mutant Messiah," a prophesied savior of all mutantkind.

Personality

Hope may be more mature and capable than normal human teenagers, but she is still just a teenager. She is energetic, instinctively rebellious and occasionally a bit rude. She dislikes being held up to other people's standards and finds the religious cult that has formed around her to be more annoying than flattering.

Biography

Real Name: Isca

Height: 5'9" **Weight:** 151 lbs. **Gender:** Female

Eyes: Varies, typically white

Hair: Varies, typically black

Size: Average

Distinguishing Features: Skin, eye and hair colors vary with her allegiance; skin is often covered in black geometric markings

Occupation: Adventurer

Origin: Mutant

Teams: Great Ring of Arakko

Base: Arakko

History

Isca grew up on the sentient island of Okkara some hundreds of years ago in a settlement of other powerful mutants. Her X-Gene activated in her early childhood, and from that moment on, she could never lose. Ironically, this power served to alienate her from the other people of Okkara, none of whom could stand to compete with her. Only her older sister, Genesis, remained faithful.

Some years later, the island of Okkara was split into the twin islands of Krakoa and Arakko. While Krakoa remained on Earth, Isca, Genesis and Arakko were sucked through a portal to the demonic dimension of Amenth. Genesis did her best to organize the mutants of Arakko into a fighting force capable of holding back the demonic hordes, but Isca—seeing the overwhelming odds arrayed against them—switched sides and joined the demons, who quickly took over Arakko and possessed Genesis.

The tide of this battle would not turn again until many years later, when the demons of Amenth attempted to invade Earth through a portal to Krakoa. Isca, working with the people of Krakoa, finally managed to defeat the demons and rejoin her sister. Subsequently, Isca took on a position in the governing Great Ring of Arakko.

Personality

Isca's outward confidence masks a tragic emotional interior. Her powers ensure that she is always on the winning team, but they don't always allow her to pick which team wins. If her preferred side is doomed to fail, her powers cannot make them succeed. Instead, they compel her to switch sides. This has forced her into a duplicitous lifestyle she quietly despises

Eyes: Brown **Hair:** Black **Size:** Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Mutant
Teams: Excalibur, Generation X, X-Men
Base: Krakoa

History

Jubilation Lee's parents were killed when she was just a teenager. Unwilling to spend the rest of her childhood in an orphanage, she took to living in the back rooms of a shopping mall. It was around this time that Lee's mutant powers began to manifest. She used her newfound control over light energy to become a busker, living on donations from local shoppers.

Soon enough, an anti-mutant militia caught wind of Lee's superhuman performances and attempted to run her out of the mall. Thankfully, a group of X-Men managed to rescue her from the bigots.

Lee's rescuers offered her a position within their ranks. She accepted, and for a time, she was an active member of the main team. However, as a younger person, Lee never felt fully accepted by her older teammates. She eventually left the X-Men to form Generation X, a team consisting entirely of mutant teenagers.

Lee and the other Generation X members eventually got older and went their separate ways, but they still remain close. With the help of her former teammate Jono Starsmore (A.K.A. Chamber), Lee adopted and is currently raising a young boy she named Shogo.

Personality

Lee has been a hero long enough now to consider herself a seasoned adventurer. That said, she still emanates a certain kind of endearing dorkiness. Her favorite activities include going to the arcade and LARPing with her friends.

Despite the hardships she's been through, Lee is as enduringly upbeat as her first name would imply. She is also a caring mother, always putting Shogo's safety first, something that's often proved a real challenge.

Real Name: Xuân Cao Mạnh
Height: 5'4" **Weight:** 119 lbs. **Gender:** Female
Eyes: Brown **Hair:** Black **Size:** Average
Distinguishing Features: Bionic leg
Occupation: Adventurer
Origin: Mutant
Teams: New Mutants, X-Men
Base: Krakoa

History

When Xuân Cao Mạnh was just a little girl, her parents were murdered by pirates, leaving her and her three siblings in the custody of their uncle, General Nguyen Coy.

Xuân and her twin brother, Trân, were both born with the power to psychically possess other people—a power their uncle sought to exploit for his own nefarious purposes. Xuân feared her powers and refused to go along with her uncle's plans, but Trân—a sadist at heart—readily agreed.

To put a stop to Trân's crime spree, Xuân had to absorb her brother's entire psyche. He became a permanent part of her—a dark and proactive counterpart to her own shy and patient nature.

She took the codename Karma, and having already proven herself a hero, she was invited by Professor Charles Xavier to join his junior superhero squad, the New Mutants. In the years since, Karma has done her best to act as a member of—and later on, advisor to—the New Mutants, but her obligations as a caretaker for her two younger siblings have kept her from being as active a member of the team as many of her cohorts.

Personality

From the moment she absorbed Trân, Xuân was doomed to have a somewhat unstable personality. Depending on the emotional states of the people she possessed, she could be perfectly fine one moment and irrationally angry the next.

The founding of Krakoa changed everything for Xuân. For the first time in years, Trân has a body of his own, and Xuân has a mind all her own. She's been trying to make the best of her newfound freedom by focusing on herself and her relationships, particularly that with her girlfriend, Galura.

Real Name: Quintavius Quirinius "Quentin" Quire
Height: 5'8" **Weight:** 129 lbs. **Gender:** Male
Eyes: Brown **Hair:** Brown, currently dyed pink
Size: Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Mutant
Teams: West Coast Avengers, X-Force
Base: Krakoa

History

Quentin Quire is an ambitious and talented young telepath. He joined Professor Xavier's School for Gifted Youngsters during its first year of fully public operations as a school for mutants, and he rapidly distinguished himself as a leader within the mutant student body. Almost overnight, a cultlike following formed around him.

Quire was not emotionally prepared for this level of success. The fame went to his head, and soon enough, he started thinking he would be a better headmaster for the school than Professor X. He and his most loyal followers attacked the Professor, declaring themselves the true masters of the institute.

The other teachers at the school managed to put Quire's rebellion down without much effort, but the reputation of "troublemaker" stuck with him, driving him toward further misbehavior, even years afterward. Only recently has he managed to put aside his old ways and learn a bit of humility.

As a member of Krakoa's X-Force, Quire played a critical role in the protection of the island-nation. The older mutants on Krakoa still regard him with suspicion, but many of the island's younger residents consider him a figure worthy of respect and even admiration.

Personality

Despite his incredible talents, Quentin Quire is a deeply insecure person. He believes himself to be mostly worthless, and he lives in constant fear that his peers and superiors might come to see him the same way he sees himself. That's why he's so eager to take on leadership roles. As long as he's in charge, people have to respect him.

Quire has slowly learned to deal with his insecurities in healthier ways, but the feelings have never entirely left him. He's still recovering from his breakup with Phoebe Cuckoo, of the Stepford Cuckoos.

BIOGRAPHY

Real Name: Yuriko Oyama
Height: 5'9" **Weight:** 128 lbs. **Gender:** Female
Eyes: Brown **Hair:** Black **Size:** Average
Distinguishing Features: Retractable adamantium nails
Occupation: Assassin
Origin: High Tech: Cybernetics
Teams: Reavers, Sisterhood of Mutants, Weapon X-Force
Base: Mobile

History

In an attempt to make money on the black market, mad scientist and Japanese nationalist Kenji Oyama developed a process for safely lacing human bones with adamantium. This process was invasive, requiring the installation of cybernetic implants, but it worked, and weapons dealers from around the world took note.

Kenji implemented his process only a few times before the super heroes of the world took him down. In his absence, his daughter Yuriko took up the cause of protecting her father's legacy. She had her own body implanted with adamantium and set out to become a mercenary under the codename Lady Deathstrike.

More than anyone, Yuriko hates Wolverine (Logan). She believes his adamantium implants were possible only because of research stolen from her father, and that Wolverine's very existence spits in the face of her late father's work.

Yuriko's longtime rivalry with the nigh-unkillable mutant has, at times, drawn her into conflict with the larger world of mutants. Because of that, it is not unknown for her to ally herself with mutant-hating bigots like William Stryker.

Personality

Lady Deathstrike is a grim and merciless combatant with an unflinching sense of duty. She pursues her targets relentlessly and without fail. Wolverine is one of the few people in existence to have bested her in direct combat.

She would hardly ever admit it, but Lady Deathstrike long ago lost track of her real reasons for hating Wolverine. She continues to fight him for the same reason that she continues her work as an assassin. It's all she knows.

Eyes: Yellow **Hair:** None **Size:** Little
Distinguishing Features: Looks like a tiny purple dragon
Occupation: Outsider
Origin: Alien
Teams: Excalibur, Marauders, S.W.O.R.D., X-Men
Base: Krakoa

History

Lockheed was born into the Flock: an interstellar society of dragon-like aliens. His childhood was as normal as any childhood can be for an alien dragon. He grew up healthy and strong, and he made a name for himself among his people as a warrior in their eternal battle against the alien Brood.

It was a good life, but not one that Lockheed wanted. The day before he was bound to be wed, Lockheed ran into a group of captive X-Men trapped inside a Brood settlement. He helped to free them, and they allowed him to accompany them back to Earth. He has been with them ever since.

Lockheed likes all of the X-Men, but he has a particular affinity for Kate Pryde. They accompany each other on many of their adventures, and Lockheed often is seen perching atop her shoulders or neck. Kate treats Lockheed like the greatest pet she could have, and that's just the way he likes it.

Personality

Lockheed can understand and speak English to a limited degree, but he prefers to spend most of his time silent. He's protective of the X-Men, particularly Kate Pryde, but his tiny body makes it hard for him to be of much use to them in combat. He tends to skirt around the edges of battles, scorching off-guard villains and goons from afar.

Real Name: Longshot
Height: 6'2" **Weight:** 80 lbs. **Gender:** Male
Eyes: Blue **Hair:** Blond **Size:** Average
Distinguishing Features: Left eye glows when using powers; born with only eight fingers
Occupation: Adventurer
Origin: Weird Science
Teams: Exiles, X-Factor, X-Men
Base: Mobile

History

As the supreme leader of Mojoworld, the monstrous Mojo rules over a race of genetically engineered slaves that he abuses for his own amusement, forcing them into dire, life-or-death situations and filming the results for use in a series of sick and twisted TV shows. One of these slaves—a stuntman named Longshot—attempted to overthrow Mojo. As the result of a bizarre genetic experiment, Longshot had been born extremely lucky, and he came within a hair's breadth of defeating Mojo once and for all before being mindwiped by Mojo's lackeys.

The amnesiac Longshot fled to Earth-616, where he joined forces with the X-Men. He began a relationship with his teammate Dazzler and even had a son with her—who would become known as Shatterstar—before once again being captured and mindwiped by Mojo's forces.

Eventually, the Exiles freed Longshot and invited him into their crew. After regaining most of his lost memories, he left the Exiles to join X-Factor Investigations and spend more time with Dazzler. Following the dissolution of X-Factor Investigations, Longshot all but disappeared.

Although a close mutant associate, Longshot is not a mutant himself, and he has been minimally involved in the Krakoan era. He is, presumably, still scouring the Multiverse for a way to defeat Mojo.

Personality

Because his mind is in shambles more often than not, Longshot operates almost entirely on sheer instinct. He trusts that his uncanny luck can lead him to where he needs to be and allow him to endure any troubles that may arise along the way.

BIOGRAPHY

Real Name: Monet St. Croix
Height: 5'7"/5'5" **Weight:** 125 lbs./180 lbs.
Gender: Female **Eyes:** Brown/Blue
Hair: Black/Red **Size:** Average
Distinguishing Features: Red, spiny Penance form
Occupation: Tycoon **Origin:** Mutant
Teams: Avengers Unity Division, Generation X, X-Factor, X-Force, X-Men
Base: Krakoa

History
As a young girl, Monet St. Croix was trapped in the form of a mute and prickly red creature by Marius St. Croix, her evil older brother. Marius intended to keep Monet in such chains for the rest of her life, using the marrow in her bones to quell his insatiable hunger for mutant genetic material. But with the help of the mysterious mutant hero Gateway, Monet eventually managed to escape.

Gateway left Monet in the care of a team of young mutant super heroes known as Generation X. She became a successful member of the team, and they, in turn, helped free her from her alternate form (known as Penance). Finally back in her own body, Monet adopted the codename of M.

M went on to become a vital member of many important mutant teams, such as X-Force, X-Factor Investigations and the X-Men themselves. She later took up residence on Krakoa, not far from her rambunctious younger sisters Claudette and Nicole, who have frequently used their own powers to disguise themselves as Monet.

As the co-head of Krakoa's X-Corp, M played a critical role in the maintenance of the island-nation's finances. She has recently displayed the ability to voluntarily take on her old Penance form, though precisely how she managed this feat remains unknown.

Personality
The traumas M suffered in her early life led her to adopt the personality of a stuck-up snob. Afraid of letting anyone get too close, she spent much of her life purposefully pushing her friends away, treating them like her lessers.

M has mellowed out in her later years, but she is still a rather cold and ruthless person—which makes her a perfect fit for X-Corp.

Alternate Form
M's Penance form slightly changes the way her powers work. As Penance, M gains the Mighty 2 and Sturdy 1 powers. Her attacks become Sharp, and she loses her Brilliance 1 power. In her M form, she retains Mighty 1 and gains Brilliance 1 but loses Sturdy 1.

Numbers before a slash are for her regular human form, and numbers after a slash are for her Penance form.

Eyes: Green **Hair:** Red **Size:** Average
Distinguishing Features: Eyes sometimes glow red
Occupation: Adventurer
Origin: Magic: Sorcery, Mutant
Teams: Hellfire Club, Sisterhood of Mutants, X-Men
Base: Krakoa

History

Mister Sinister created a clone of Marvel Girl (Jean Grey) and implanted a false identity in her, causing her to believe she was a pilot named Madelyne Pryor. Working from the shadows, he ensured she would meet and fall in love with Cyclops and, eventually, have a child with him, one he hoped might become a world-ending weapon he could turn to his advantage.

Sinister did succeed in bringing Pryor and Cyclops together, but his plans spiraled outward from there. The child Pryor and Cyclops had was powerful—eventually becoming the time-traveling hero Cable—but he was not Sinister's ultimate weapon. Sinister attempted to cover up his scheme by killing Pryor, only to end up accidentally activating her psychic powers.

Driven mad by her newfound power, Pryor turned on both Sinister and the X-Men, attacking them as the Goblin Queen. Although she eventually regained her sanity, Pryor retained her resentments toward Sinister and Cyclops for years afterward. Despite that, she struck up a long-term relationship with Cyclops' brother Havok.

Pryor died but was later resurrected on Krakoa, after which Magik helped her become the new ruler of Limbo.

Personality

Madelyne Pryor is, in many ways, a photographic negative of Jean Grey. They may look identical, but Pryor has embraced the darker side of her psyche in a way that Grey usually refuses.

Grey does her best to be an upstanding, shining example for others, even under the direst of circumstances. Pryor cares only about getting the job done, often regardless of morals or optics.

Eyes: Blue **Hair:** Blond **Size:** Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Magic: Sorcery, Mutant
Teams: New Mutants, Strange Academy, X-Men
Base: Krakoa

History

As the younger sister of Colossus, Illyana Rasputina was doomed never to live a normal life. At the age of 6, she was kidnapped by the evil sorcerer Belasco and dragged into the demonic dimension of Limbo.

Belasco kept her captive in Limbo for seven years, forcing her to act as his servant and apprentice. He was a cruel and abusive caretaker, but he taught Rasputina how to fight, and how to access Limbo's sorcerous magics.

Colossus and the X-Men eventually managed to free Rasputina from Belasco's clutches, but the damage had been done. She returned to Earth just moments after she had been taken, but seven years older and with a lifetime of trauma behind her.

Forever changed, Rasputina decided to use her new skills for the betterment of mutantkind. Following in her older brother's footsteps, she took on the codename of Magik and joined the New Mutants.

In the years since her return from Limbo, Magik has proven herself to be at least as important and vital a mutant hero as her brother. As one of the Great Captains of Krakoa, she oversaw all operations taken on by younger mutant squadrons, including the New Mutants.

Personality

As a team leader and educator, Magik is strict, serious and focused. Doctor Strange himself would find it a challenge to beat her in a contest of magical prowess.

That said, Magik is still young. When she's not fighting for her life or leading a team through enemy territory, she can be casual, snarky and even outright goofy. The elder leaders of Krakoa consider her to be something of a mischief maker.

BIOGRAPHY

Real Name: Amara Juliana Olivians Aquilla
Height: 5'6" **Weight:** 131 lbs. **Gender:** Female
Eyes: Blue **Hair:** Blond **Size:** Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Mutant
Teams: Hellions, New Mutants, X-Men
Base: Krakoa

History

Amara Aquilla was born into an important political family within the city of Nova Roma, a long-lost Roman colony hidden deep within the jungles of Brazil. She had minimal contact with the outside world until her teen years, when the sinister Black Priestess (Selene Gallio) launched a soft coup against the city's leaders. Fearing for her life, Aquilla fled into the surrounding jungle, where she encountered the New Mutants.

Despite the team's best efforts, the Black Priestess captured Aquilla and threw her into a pit of boiling lava. However, rather than dying, Aquilla discovered she could control the liquid rock and even merge with it. She used her new powers to defeat the Black Priestess, and as thanks for her help, the New Mutants offered her a place on their team. Aquilla accepted, and under the codename Magma, she began adventuring with the New Mutants.

Magma later served on other teams, including the X-Men, but she never strayed far from her New Mutant roots. She remains close friends with all of the original New Mutants, and although she has of late put her super-hero duties on the back burner to focus on herself, she is still considered a backup member of the team.

Personality

Emotional outbursts can cause Magma's powers to go berserk, to the point of summoning entire volcanoes. For the safety of those closest to her, she does her best to stay cool and collected at all times, maintaining a polite and reserved demeanor. Of course, those repressed emotions have to come out eventually. When Magma does get mad, she gets really mad.

Real Name: Eshu
Height: 6'3" **Weight:** 280 lbs. **Gender:** Male
Eyes: Brown **Hair:** Black **Size:** Average
Distinguishing Features: None
Occupation: Adventurer
Origin: High Tech: Battle Suit, Weird Science
Teams: Alpha Strike, Omega Flight
Base: Weirdworld

History
Eshu claims to have been born tens of thousands of years ago into a tribe of proto-humans who cast him out into the arctic wastes as punishment for being a bully and a tyrant. The earliest official records for him begin with him being committed to the Ravencroft Institute for the Criminally Insane in 1918.

Whatever his age, at some point Eshu stumbled upon the wreckage of the alien Plodex ship that brought Alpha Flight member Marrina Smallwood to Earth. The ship's failing systems merged with Eshu, trapping him inside the vessel and driving him insane. Years later, he regained enough of his sanity to send a signal to lure Smallwood to his location. In the course of pursuing her, Alpha Flight destroyed the ship, allowing Eshu to finally escape.

Under the codename of the Master, Eshu set out on a lifelong campaign to destroy Alpha Flight and take over the world. More recently, he's clashed with the Champions.

While spying on the Champions, Eshu wandered into the mystical dimension of Weirdworld. After conquering the local people, he declared himself the place's monarch. The Champions drove him from his castle but ultimately failed to capture him.

Personality
Eshu fashions himself as a genius megalomaniacal conqueror in the mode of Doctor Doom or Kang. However, both Doom and Kang consider him to be a joke. He has considerable cunning, but he has never achieved a fraction of their success. He believes that if he can destroy Alpha Flight, the world will finally see him for the threat he is.

BIOGRAPHY

Real Name: Jason Wyngarde
Height: 5'10" **Weight:** 140 lbs. **Gender:** Male
Eyes: Gray **Hair:** Gray **Size:** Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Mutant
Teams: Brotherhood of Evil Mutants, Hellfire Club, X-Corp
Base: Krakoa

History

Despite being born with the power to create complex illusions, Jason Wyngarde spent most of his life in obscurity, working as a mentalist at a two-bit carnival. He didn't understand the true potential of his powers until he was well into his graying years, when Magneto turned up at his carnival booth.

Magneto offered Wyngarde a founding position in his Brotherhood of Evil Mutants. Enticed by the prospect of worldwide recognition, Wyngarde readily accepted. He took on the codename of Mastermind and spent the next several years assisting Magneto in his battles against the X-Men.

Ironically, Wyngarde's greatest victory came after he left the Brotherhood behind. As part of a bid to join the Hellfire Club, Wyngarde corrupted the mind of Jean Grey, turning her into the world-shattering Dark Phoenix. Jean eventually defeated Wyngarde, but his temporary victory left lasting scars, both on her and on the universe at large.

Wyngarde tried, desperately and repeatedly, to recreate his one great victory, only to end up getting himself killed. He was revived recently as part of Krakoa's resurrection protocols, and despite the hopes of the mutant nation's leaders, he quickly returned to his villainous ways.

Personality

Wyngarde is a hateful and manipulative old man. He hates the world for failing to recognize him, he hates the X-Men for defeating him, but most of all, he hates himself. He hates that he can't recreate the success of his past, and that with each failing attempt, his body continues to grow older. These days he spends most of his time cloaked in an illusion that makes him look far younger.

Real Name: Nathaniel Essex
Height: 6'5" **Weight:** 285 lbs. **Gender:** Male
Eyes: Varies, usually red
Hair: Varies, usually black
Size: Average
Distinguishing Features: Pale, almost vampiric appearance, with a red diamond on his forehead
Occupation: Scientist
Origin: Mutant: Artificial
Teams: Hellions, Marauders, Quiet Council
Base: Krakoa

History

For better and for worse, Victorian scientist Nathaniel Essex was unimaginably ahead of his time. He not only predicted the imminent and widespread emergence of mutants in mainstream society, but he also managed to implant himself with a powerful form of the X-Gene.

Unfortunately, these scientific successes went straight to his head. Essex quickly became convinced that he was the most important person in existence and that his sole mission in life should be to spread his own influence across the cosmos. To that end, he created dozens of clones of himself and imbued them each with a single principle: survival of the fittest—last clone standing is the winner.

Although the original Essex likely died ages ago, his clones have carried on, fighting both one another and the world at large in an unending quest to spread the influence of Essex.

A number of variations of Essex exist, but the most common clones have a red diamond on their foreheads and call themselves Mister Sinister. Collectively, these Sinisters have had a profound impact on the development of Earth-616 and its mutants. Sinister's dark influence can be traced back to the creation of numerous important adventurers (such as Madelyne Pryor) and to the foundation and subsequent destruction of the mutant government on Krakoa.

Personality

The Sinisters are, one and all, insane megalomaniacs. They are perfectly capable of being polite—even charming—in social situations, but deep down, they hate everyone. They want nothing more than to rid the universe of everything outside of themselves. The rest of existence either has to go away or must become Sinister.

Real Name: Moira Ann Kinross MacTaggert

Eyes: Blue **Hair:** Brown **Size:** Average
Distinguishing Features: None
Occupation: Adventurer, Educator
Origin: Mutant
Teams: Orchis, X-Men
Base: Mobile

History

When she was 13 years old, Moira MacTaggert gained the mutant power of reincarnation. The moment she dies, she returns to the start of her life, with her memories of her previous lives intact. MacTaggert spent her first life blissfully unaware of her powers, but once she realized what was happening, she spent her next eight lives playing mutants and machine life-forms, like Sentinels, off each other, searching for a future where she could live in peace.

Finally, in her tenth life, MacTaggert came up with the idea for a mutant nation on the island of Krakoa. She sought out Professor X and spent the next several years working with him, all the while manipulating events and individuals to prepare the way for Krakoa. To maintain secrecy, she eventually faked her death and went into hiding, revealing the truth to only a handful of mutant leaders.

MacTaggert's role in Krakoa's foundation did not become widely known until over a year later, when Destiny and Mystique dragged her out of hiding and forcibly depowered her. Having lost faith in Krakoa's future, Moira switched sides. She uploaded her mind to a cybernetic body and began working to destroy Krakoa instead.

Personality

The weight of so many tragic lifetimes has made Moira MacTaggert cold. She no longer cares about mutants or machines. She just wants a world where she can live without interference.

Although she had a few romantic relationships in her tenth life, they never lasted. She learned long ago to maintain no strong attachments. Even her son, Proteus, has not seen her in some time.

BIOGRAPHY

Real Name: Mojo
Height: 6'9" **Weight:** 512 lbs. **Gender:** Male
Eyes: Yellow eyes with orange irises and black pupils
Hair: Cords resembling hair attached to head
Size: Big
Distinguishing Features: Bright yellow skin, twisted smile, spiderlike cybernetic legs, slender four-fingered hands
Occupation: Entertainer, Leader
Origin: Alien, High Tech: Cybernetics
Teams: None
Base: Mojoworld

History

Mojo is one of a number of monstrous Spineless Ones, beings who inhabit the Mojoverse, a dimension outside regular time and space. As the supreme leader of Mojoworld, Mojo rules over a race of genetically engineered slaves. For untold years, he abused these slaves for his own amusement, forcing them into dire, life-or-death situations and filming the results for use in a series of sick and twisted TV shows.

Then Longshot, one of Mojo's slaves, rose up and rebelled against the Spineless Ones. Faced with overwhelming opposition from Mojo and his lackeys, Longshot fled to Earth-616, where he joined forces with the X-Men.

Intrigued by the mutants and enticed by the prospect of making them into a spectacle, Mojo began to include the X-Men in his sadistic schemes. Over the years, he has captured Longshot and his mutant allies dozens of times and forced them to participate in one of his depraved television programs. Each time, they eventually found a way to escape.

Although Mojo has, at times, been temporarily deposed, he has always managed to return to power and set rebel plans back to square one.

Personality

The term *narcissist* does not even begin to scratch the surface of Mojo's self-absorbed insanity. He not only believes himself to be the center of the universe—he believes he is the only being of any value whatsoever across all of existence. He has a nasty habit of engraving his face onto other people and places, only to destroy them the moment he decides they are unworthy of his visage.

BIOGRAPHY

Real Name: James Arthur "Jamie" Madrox
Height: 5'11" **Weight:** 155 lbs. **Gender:** Male
Eyes: Brown **Hair:** Brown **Size:** Average
Distinguishing Features: None
Occupation: Adventurer, Investigator
Origin: Mutant
Teams: X-Corp, X-Factor, X-Men
Base: Krakoa

History

Jamie Madrox's duplication powers activated shortly after his birth, long before he was capable enough to handle them. To keep him from duplicating endlessly, Professor X (Charles Xavier) created a power-dampening suit for the young Madrox. It began to malfunction years later, long after Madrox had grown up and forgotten its purpose. Duplicating out of control and driven into a state of temporary insanity, he terrorized the streets of New York City. In the end, it took both Professor X and the entire Fantastic Four to bring him back to his senses.

Afterward, Professor X took Jamie in and taught him to control his powers without the suit. Despite displaying some crimefighting potential, Jamie refused to formally join any super-hero team until years later, when dire circumstances forced him to become part of X-Factor.

Jamie enjoyed his time with X-Factor—enough to stick with the team through its next few incarnations, even helping found X-Factor Investigations. He fell in love with Layla Miller, one of his X-Factor teammates, and eventually retired to spend more time with her and with their son, Davey. Recently, Madrox un-retired to join X-Corp's board of directors.

Personality

The personalities of Madrox and his duplicates vary slightly from one another, but they all have a few things in common. They are laid-back, put-upon men with dry senses of humor and subtle manic-depressive tendencies.

Most of Madrox's "dupes" stick close to him and to Krakoa, but over the years, a select few have chosen to live independently. Some of these duplicates even have families of their own.

Eyes: Green **Hair:** Red **Size:** Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Magic: Sorcery
Teams: Alpha Flight
Base: Mobile

History
As a smart young woman from a poor family, Heather McNeil quickly earned herself a job as a secretary for a top executive at the Am-Can Petroleum Corporation. She enjoyed the job, but when she found out that her bosses were planning to steal their best engineer's exosuit research and sell it to the military, she resigned in protest. She and the engineer, James Hudson, fled into the custody of the Canadian government.

The government offered James and Heather complete protection on the condition that they use their exosuit technology to help form a Canadian super-squad. The pair agreed and began to draw up plans for what would become Alpha Flight. At the same time, they became romantically involved, and they married and had a daughter, Claire.

In the beginning, Heather often acted as a support member of Alpha Flight, staying out of the field to provide intel and advice for the other members, but whenever James was unable to lead the team himself, she donned his exosuit and served in his place as the costumed hero Vindicator.

Recently, Heather took on a new codename, Nemesis, and secretly joined some of her mutant teammates in an illegal scheme to help mutant refugees from Krakoa escape to safety. When the scheme collapsed, she and the rest of Alpha Flight were taken into federal custody.

Personality
Heather Hudson is the heart of Alpha Flight. She is the shoulder other members lean on in times of strife, and she is the empathetic voice they turn to for advice in times of peace. Unlike her husband, she feels no strong loyalties to the Canadian government.

Occupation: Military

History

In the dystopian future of Earth-811, mechanical life-forms known as Sentinels have all but wiped out mutantkind. Among the most advanced of this world's mechanical life-forms are the Nimrods, sentient Sentinels designed to act as autonomous battlefield commanders.

When the hero Rachel Summers (Askani) escaped from Earth-811 to the relative safety of Earth-616, a Nimrod unit followed. The X-Men of Earth-616 managed to eke out a small victory over this lone Nimrod, but he was far from the last of his kind to plague them.

As the X-Men of Earth-616 explored more and more timelines, they encountered a great number of alternate Nimrods. In fact, Nimrod seems to be present in some form in almost every timeline in which mutants are oppressed.

This phenomenon has led many mutant scientists to conclude that Nimrod represents the flip side of the mutant coin: the cold, technological path toward machine supremacy that humanity is forced to walk down if it cannot embrace life alongside mutants.

As long as bigotry and technology continue to march forward, Nimrod is inevitable.

Some of Nimrod's variants are relatively weak—barely stronger than your average MK II Sentinel—while others are unstoppable monstrosities on the level of Rank X. This profile represents the most basic and common Nimrod units, like the one first encountered by Earth-616's X-Men.

Personality

Nimrod units are, by and large, intelligent, polite and ruthlessly self-interested. They seek to improve the universe by replacing all organic life with beautiful, efficient machine life. The Nimrods don't hate organic life so much as they look down on it. They consider both humans and mutants to be sad and pathetic creatures for whom death is a mercy.

History

In Nocturne's universe, older versions of Wolverine (Logan) and Nightcrawler led a fledgling X-Men unit out of the old Xavier mansion. Although she was just one of a number of next-generation heroes on this team, as Nightcrawler's daughter, she was subject to additional pressures and expectations, and she frequently ran away from home. Then, one day, she ran too far away to ever return.

Freak temporal fluctuations forced her out of her home universe and into the Panoptichron, a crystal citadel existing outside time and space. The inhabitants of this citadel—the Timebreakers—forced Nocturne and several other temporal refugees to travel the Multiverse, fixing universes the Timebreakers had accidentally ruined.

As the Exiles, Nocturne and her compatriots repaired the errant timelines of dozens of worlds. Eventually, the Timebreakers released Nocturne from their service and allowed her to make a new life for herself on Earth-616. Although she spent a bit of time adventuring with the X-Men and later Excalibur, she gradually gravitated back toward her friends in the Exiles.

Recently, Nocturne left the Exiles to become the Scheherazade of a world inspired by *One Thousand and One Nights*. However, she remains in touch with her teammates.

Personality

Nocturne is one of the most hardened and experienced members of the Exiles. In fact, with the exception of her best friend, Blink, she is the only member of the original Exiles to survive to the modern day. In spite of her expertise, Nocturne has never taken on a leadership position within the team. She's a happy-go-lucky person who values her freedom too much to consider ordering others around.

BIOGRAPHY

Real Name: Jean-Paul Beaubier
Height: 5'11" **Weight:** 185 lbs. **Gender:** Male
Eyes: Blue **Hair:** Black **Size:** Average
Distinguishing Features: Unusually pointy ears
Occupation: Adventurer
Origin: Mutant
Teams: Alpha Flight, X-Factor
Base: Krakoa

History

Jean-Paul Beaubier and his sister, Jeanne-Marie, were just infants when their parents died in a car accident. In the chaos of the aftermath, the twins were sent to different orphanages. Jean-Paul grew up bouncing around the foster system, while Jeanne-Marie spent her childhood in a Catholic boarding school.

The twins had no knowledge of each other's existence until they were well into their adult years after being recruited into Canada's Department H. The moment they grasped hands, their mutant powers activated, and a powerful and blinding light emerged from their bodies, blasting them backward.

The twins decided to use their powers for the betterment of humanity. They joined the Canadian super-team Alpha Flight and spent most of the next decade adventuring together, making up for lost time.

The twins didn't start living separate lives again until the founding of Krakoa drew them away from their Alpha Flight colleagues. These days, Jean-Paul runs Krakoa's X-Factor Investigations team, while Jeanne-Marie acts as a member of the secretive Marauders.

Personality

In his youth, Jean-Paul won fame around the world as an Olympic-level skier. The sports media of the time portrayed him as the platonic ideal of a playboy: rich, handsome and a little stuck-up. While these accusations were not entirely false, they failed to paint a complete picture.

Jean-Paul can certainly be blustery when he wants to be, but he can also be kind, sensitive and even insecure. As a gay man, he spent many years struggling with his sexuality before finally coming out.

Jean-Paul cares deeply for his sister and for all of his teammates.

History
When "Old Man" Logan was not yet an old man, his world largely resembled Earth-616. He was Wolverine, and he lived with and fought alongside the X-Men. Then, one day, a massive and coordinated super-villain attack turned the planet into a wasteland.

Most of the world's heroes were slaughtered in a single night. Logan himself participated in this slaughter, with Mysterio tricking him into killing the other X-Men. In the aftermath, the victorious villains divided the remnants of the world among themselves, and Logan spent the next several decades mournfully wandering those fallen wastes, trying to avenge his friends. He was on the verge of liberating his world once and for all when a freak anomaly sucked him onto Earth-616.

Logan spent the next few years working with the X-Men of Earth-616, helping to ensure that what happened on his world would never happen to them. Then he returned home to finish what he started.

Ultimately, Logan failed to liberate his home when he and the Sabretooth of his world killed each other on the field of battle. However, Logan's allies continue to fight on in his honor, working to restore justice to their world one punch at a time.

Personality
Old Man Logan has the same basic personality as that of the Logan of Earth-616, just heightened by age and experience. If Logan is a cold-blooded killer, then Old Man Logan has blood made of ice. If there's a hint of sadness in Logan's eyes, then there's an ocean of tragedy lurking beneath Old Man Logan's eyelids.

BIOGRAPHY

Real Name: Lorna Sally Dane
Height: 5'7" **Weight:** 115 lbs. **Gender:** Female
Eyes: Green **Hair:** Green **Size:** Average
Distinguishing Features: None
Occupation: Adventurer, Investigator
Origin: Mutant
Teams: X-Factor, X-Men
Base: Mobile

History

Throughout her childhood, Lorna Dane never suspected that she was the daughter of the infamous mutant Magneto. She was raised by her aunt and uncle and had no contact with the world of super heroes until the age of 19, when she was kidnapped by Mesmero.

Mesmero activated Dane's latent mutant powers and attempted to turn her into a weapon he could use to conquer Earth. Thankfully, his plan was foiled by the X-Men, who, in the aftermath, invited Dane into their ranks.

Dane took on the codename of Polaris and gradually became a regular face around X-Men headquarters. She worked hard to uncover her true parentage and to eventually reconnect with her long-lost father.

For many years, Polaris was in a relationship with Havok (Alex Summers). Although their romance ended in a messy breakup, they managed to patch things up well enough to continue working together.

Although she isn't on any Krakoan councils, Polaris is a highly respected member of the mutant nation. She currently acts as a backup for both X-Factor and the X-Men.

Personality

Polaris has experienced more than her share of being kidnapped, brainwashed or otherwise possessed. All this suffering and confusion has worn the edges off her heroic spirit, but she still tries to help out where she can. She's not the type to hold grudges, and despite Magneto's abandonment of her, she's on good terms with him. She is widely considered to be both a good friend and a skilled investigator.

Real Name: Eugene Milton Judd
Height: 3'6" **Weight:** 230 lbs. **Gender:** Male
Eyes: Brown **Hair:** Bald **Size:** Small
Distinguishing Features: Unusually short and buff stature, slightly deformed right ear
Occupation: Adventurer
Origin: Magic: Demonic
Teams: Alpha Flight, Beta Flight, Gamma Flight
Base: Mobile

History

Eugene Judd made a name for himself in the early twentieth century as a mercenary and a fortune hunter, specializing in the acquisition of supernatural items. Then one day, Judd uncovered a dark blade he was hired to seek that would change the course of his entire life.

The blade contained a dark and malevolent spirit that entered Judd's body, imbuing him with incredible strength and longevity, but at a price. He was shrunken down and filled with chronic pains that would plague him the rest of his days.

Judd spent the next several decades in and out of jail, struggling to find work, only to eventually stumble into the same social circles as Guardian (James Hudson). Sensing potential in the mercenary, Guardian recommended Judd for Canada's premier super-hero team, Alpha Flight. Under the codename Puck, Judd spent most of the next decade adventuring with the Alpha Flight crew, helping to protect Canada from threats around the world.

These days, Judd and several of his old Alpha Flight comrades spend most of their time working with Gamma Flight, an experimental program dedicated to protecting the world from Gamma-radiation-related threats.

Personality

Puck is the epitome of a classic twentieth-century, hypermasculine, hard-drinking, thrill-seeking, book-reading adventurer, in the style of Ernest Hemingway. He can do a dozen somersaults in a row while quoting the Bard, and he regularly does, just to show off.

Although he can be a bit old-fashioned at times, Puck is a valuable and reliable friend. His teammates in Alpha Flight and Gamma Flight consider him an essential member of the crew.

History

As an up-and-coming U.S. Army sergeant, William Stryker's mind broke when his wife gave birth to a mutant child. He stabbed the child and murdered his wife, then dropped out of the army to become an anti-mutant preacher. He quickly amassed a massive and puritanical following, and using his old army training, he trained a handful of his closest followers into a militia.

Intent on cleansing the Earth of all mutant life, Stryker began referring to his militarized followers as the Purifiers. He directed them to kidnap Professor X and force him to psychically destroy every mutant on the planet. They came within a hair's breadth of succeeding before the X-Men defeated them and sent Stryker to prison.

Stryker attempted several times to return and rebuild the Purifiers. The X-Men beat him again and again, but every time, he came back stronger and in a less-human form. Eventually, Sabretooth tracked down Stryker in Hell and annihilated his soul, ending him once and for all.

Stryker may be dead, but his cult lives on. Most of the remaining Purifiers have allied themselves with newer anti-mutant groups like the Homines Verendi and Orchis.

Personality

While personalities of individual Purifiers may vary, they are united in their hatred of mutant-kind. They claim to believe they have been anointed—either by God or some other higher power—to cleanse the world of mutants and usher in a golden age for humanity. But most of the Purifiers know, deep down, that they are simply bigots using religion to justify heinous deeds.

Real Name: St. John "Johnny" Allerdyce

Eyes: Blue **Hair:** Blond **Size:** Average
Distinguishing Features: Black, skull-shaped face tattoo
Occupation: Adventurer, Criminal
Origin: Mutant
Teams: Brotherhood of Evil Mutants, Marauders
Base: Krakoa

History

As a renowned novelist, journalist and adventurer, Johnny Allerdyce scarcely felt the need to exercise his mutant powers. Then one day, Mystique approached him, promising to show him adventures unlike any he'd seen before—on the condition that he'd agree to join her terrorist group, the Brotherhood of Evil Mutants.

Allerdyce accepted. Under the codename Pyro, he followed Mystique from the Brotherhood to Freedom Force and back to the Brotherhood again, all the while enjoying a luxurious life of crime and international intrigue.

Pyro finally encountered an enemy he could not simply incinerate: the Legacy Virus. Terminally ill and stricken with grief, he did his best to make amends before succumbing to the disease.

In a test of the mutant resurrection protocols, Pyro became one of the first mutants to be brought back to life on Krakoa. Outraged by the experimental nature of his revival, Pyro snuck aboard the Marauders' flagship, fully intending to hijack the vessel, only to end up falling asleep there and getting drafted onto the team. Luckily, the lifestyle of a globe-trotting Marauder suited him well.

Personality

Pyro is, above all other things, a thrill seeker. He became a villain because he thought it might be fun. When that got boring, he became a hero instead. One night, when he was drunk and a little depressed, he got a massive black skull tattooed on his face.

On the whole, Pyro is a fast-talking adrenaline junkie with little respect for anyone who wouldn't be willing to jump off a cliff with him at a moment's notice.

Real Name: Julio Esteban Richter
Height: 5'9" **Weight:** 145 lbs. **Gender:** Male
Eyes: Brown **Hair:** Brown **Size:** Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Mutant
Teams: Excalibur, New Mutants, X-Factor
Base: Krakoa

History

Born into a Mexican cartel family, Julio Richter's early life was marked by violence and chaos. After his father was murdered by Stryfe, Richter tried to run away from home, only to be kidnapped by the Right, an anti-mutant organization interested in his fledgling seismic powers.

X-Factor freed him from the Right's control and subsequently gave him a place among their trainees, the X-Terminators. Among mutants for the first time in his life, Richter excelled. Under the codename Rictor, he quickly graduated into the New Mutants and, from there, into X-Force.

After losing his powers on M-Day, Rictor fell into a deep depression. To cheer him up, some of his old teammates invited him to help them form X-Factor Investigations. Shortly thereafter, Rictor came out as gay and began dating one of his teammates, Shatterstar. Once Rictor regained his powers, he and Shatterstar left X-Factor Investigations and began adventuring on their own. Following the foundation of Krakoa, the pair joined Excalibur, committing themselves to the protection of the island-nation.

Personality

Despite his dark past, Rictor is more laid-back than most mutant adventurers. He's a generally cheery guy who doesn't take himself too seriously. When referring to his teammates, he frequently uses words like "dude" and "bro." Although he's closer to Shatterstar than anyone else, Rictor has been around long enough for many mutants to consider him a valued friend and teammate.

Real Name: Anna Marie LeBeau

Eyes: Green
Hair: Brown with white streaks
Size: Average Distinguishing Features: None
Occupation: Adventurer
Origin: Mutant
Teams: Avengers, Brotherhood of Evil Mutants, X-Men
Base: Mobile

History

Born into a cold and neglectful family, Anna Marie fled from home at a young age. She spent some time working as a thief on the banks of the Mississippi, earning herself the nickname Rogue. Eventually, Mystique and Destiny—having precognitive knowledge of Rogue's mutant status—took her in and raised her as their daughter. When Rogue's mutant absorption powers activated suddenly and traumatically in her early teenage years, Mystique and Destiny were prepared to comfort Rogue—and to indoctrinate her into a life of mutant terrorism.

Rogue eventually joined her adoptive mothers in the Brotherhood of Evil Mutants, but her time with the team was cut short after she accidentally absorbed the powers and psyche of Captain Marvel (Carol Danvers). On the edge of a dissociative breakdown, Rogue fled into the custody of Professor X, who helped her integrate Captain Marvel's psyche into her own and subsequently allowed her to join the X-Men.

Rogue excelled as a hero, quickly becoming a key part of the X-Men. She began a long-term romance with her teammate Gambit, and shortly before the foundation of Krakoa, the pair finally wed. Although they served as backup members of Krakoa's Excalibur team, Gambit and Rogue made an effort to spend most of their recent time focusing on each other.

Personality

Rogue's Power Control powers cause her to absorb a bit of her target's mind, so in the heat of battle, her personality can vary wildly. However, at her core, she's a kind and sensitive Southern belle, albeit one with a short fuse. She speaks in a thick Southern accent, often referring to people as "sugah."

Size: Average/Big
Distinguishing Features: Massive furry body (in alternate form)
Occupation: Adventurer, Scientist
Origin: Weird Science: Gamma Mutate
Teams: Alpha Flight, Gamma Flight
Base: Mobile

History

Early on in his collegiate studies, Walter Langkowski made the acquaintance of a gifted young particle physicist named Bruce Banner. Although they only studied together for a semester, Banner's passion for physics inspired Langkowski to pursue a career in that field himself.

After Banner's transformation into the Hulk, Langkowski got to wondering if there wasn't a way for him to make a similar—albeit more controlled—transformation. Working from Banner's notes, Langkowski built and exposed himself to a sophisticated gamma ray emitter.

Miraculously, this device worked. Otherworldly interference made Langkowski's powerful new form brown and furry, rather than green, but he managed to take on a form similar to that of the Hulk without Banner's loss of control.

On the recommendation of his friend James Hudson (Guardian), Langkowski joined the Canadian super-team Alpha Flight. He spent the next several years adventuring with them before eventually transferring—along with a number of his teammates—to the gamma-mutate-focused team Gamma Flight.

Shortly after joining Gamma Flight, Langkowski inadvertently swapped bodies with another gamma mutate named Doc Samson. No one knows exactly how long this swap may last, but Langkowski and Samson are working to resolve the issue.

Personality

Unlike most gamma mutates, Langkowski is a relatively laid-back guy. He's a highly intelligent and graceful fighter, disinclined to bouts of rage even in the direst of circumstances. He typically enters battle with a cheeky grin on his face. Like many Canadian natives, Langkowski spends most of his spare time drinking or fishing with friends.

Real Name: Sebastian Hiram Shaw
Height: 6'2" **Weight:** 210 lbs. **Gender:** Male
Eyes: Blue **Hair:** Black **Size:** Average
Distinguishing Features: None
Occupation: Tycoon
Origin: Mutant
Teams: Hellfire Trading Company, Quiet Council of Krakoa
Base: Krakoa

History
As a child of poverty, Sebastian Shaw has only ever cared about one thing: money. From the time he was a teenager, his sole goal in life has been to establish himself as the richest and most powerful man on the planet.

Shaw spent decades working his way up through the cutthroat world of international shipping. Then he took his millions and used them to take over the secretive Hellfire Club, turning it from a glorified social club for wealthy men into a mutant organization capable of conquering the planet.

Despite the fact that Shaw's schemes for world domination have been consistently thwarted by the X-Men, he's never stopped trying. Shaw is always working on some plot or another.

In exchange for the rights to several valuable drugs, Shaw agreed to temporarily place his resources in the control of the Krakoan government, allowing for the establishment of the Hellfire Trading Company. But make no mistake: Shaw does not have a generous bone in his body. He did this for personal gain, and given the opportunity, he would not hesitate to betray his collaborators for his own ends.

Personality
Shaw dresses and acts like a Victorian-era nobleman. He believes that doing so makes him look distinguished and intelligent, although many other mutants believe he looks like a pretentious fool.

No one has a stronger distaste for Shaw than Emma Frost. Frost joined the Hellfire Club in its early days, but after realizing that Shaw was an ineffective leader, she quickly abandoned the organization. Since the founding of Krakoa, she has made it her personal mission to keep Shaw in line and, whenever possible, embarrass him.

History

A deep-seated fear of mutants led roboticist Bolivar Trask to design the first Sentinels: monstrous machines built expressly to hunt and kill mutants. Despite the fact that Trask's original Sentinels eventually turned on him and he was forced to ask the X-Men for help defeating them, anti-mutant bigots have continued to follow in his footsteps, creating ever-more-dangerous versions.

One of the most common variants of Sentinel is the advanced giant Sentinel. These particular models have been referred to by many names across different timelines. Sometimes, they are called "Omega Class" or "Hunter-Seeker" Sentinels. Often, they are referred to simply by their model number. Most Sentinel models numbered MKIII and above owe something to this design.

These giant Sentinels represent a half step between Trask's crude original designs and the inevitable end point of Sentinel development: the creation of the unstoppable machine organism known as Nimrod.

Giant Sentinels are powerful and easily capable of annihilating many mutants, but unlike most Nimrods, they can be outsmarted. They are not fully sentient, nor are they good planners. A well-balanced team of smart heroes can usually take a giant Sentinel down.

Personality

Like most Sentinels, giant Sentinels are powered by a crude A.I. programmed to locate and kill mutants. Their speech is simple and robotic, devoid of any emotion or sympathy. They are perfectly willing to kill mutant children to fulfill their programming.

History

The exact origins of the Shadow King remain unknown. Some say he is a living nightmare, the very manifestation of humanity's cruelty. Others believe that he was never anything more than Amahl Farouk, a two-bit con man from Egypt who lucked into powerful telepathic abilities and made up the legend of the Shadow King to excuse his own bad behavior.

What we know for certain is that some decades ago, a young Professor Charles Xavier ran into Amahl Farouk in Cairo. They engaged in a psychic battle, and Xavier, eking out a narrow victory, blasted Farouk (and also, perhaps, the Shadow King) into the astral plane.

From that day forward, the Shadow King made it his sole mission in life to get revenge on Xavier. The dark regent has, at various times in the past, possessed several of Xavier's students and turned them against their teacher—including, most infamously, Xavier's son, Legion.

Claiming to have freed himself from the Shadow King's influence, Amahl Farouk recently attempted to take up residence on the new mutant nation of Krakoa. However, after an incident in which the Shadow King's lingering essence re-emerged from Farouk's psyche and had to be purged once again, Farouk agreed to leave Krakoa and enter into a long-term rehabilitation program on Arakko.

Personality

The Shadow King is a sadistic blowhard who delights in psychically torturing others. He loves nothing more than to trap people within their own fears and insecurities, forcing them to face their worst and most painful traumas. He can be quite polite and persuasive when he wants to be, but he is a manipulative and conniving creature, fully capable of setting short-term victories aside in the pursuit of a greater prize.

Real Name: Michael Twoyoungmen
Height: 5'10" **Weight:** 175 lbs. **Gender:** Male
Eyes: Brown **Hair:** Black **Size:** Average
Distinguishing Features: None
Occupation: Health Care Worker
Origin: Magic: Sorcery
Teams: Alpha Flight, Strange Academy
Base: Mobile

History
As a teenager, Michael Twoyoungmen wrote off the ancient treatments of his Tsuut'ina ancestors as a bunch of nonsense. He left the reservation behind to practice scientific medicine elsewhere.

Twoyoungmen had a natural talent for medical work, and in short order, he became one of Canada's top surgeons. However, for all his talents, he could not save the life of his own wife, who died of a disease his colleagues called inoperable and incurable.

Disillusioned with western medicine, Twoyoungmen spent the next several years of his life in seclusion, communing with the spirit of his grandfather and learning the magics of his people.

Determined to use his new mystic powers for the protection of all Canadians, Twoyoungmen took up the codename of Shaman and joined Alpha Flight. He has been with the organization ever since, acting as the team's healer and mystic expert, though these days—with Alpha Flight's regular activities taking a back seat to more experimental projects like Gamma Flight—Shaman spends most of his time teaching medicinal magic at Strange Academy.

Personality
More than anything, Shaman is a man blindly driven toward his goals. This has allowed him to achieve great feats, but it has also been the cause of his greatest failures. He believed there was no place for his daughter Elizabeth in his mystic studies or his adventures, so he abandoned her. In her place, he adopted the demigod Narya, raising her into Snowbird of Alpha Flight.

To reclaim her father's attention, Elizabeth became the super hero Talisman. Shaman has apologized to Talisman repeatedly for leaving her behind, but their relationship remains fraught. It may never be fully healed.

Base: Krakoa

History

During the brief period when Longshot and Dazzler (Alison Blaire) were married and fighting a rebellion to liberate Mojoworld, they had a son. Their son was delivered by a future version of himself, who erased his parents' memories of his existence and then sent his infant self one hundred years into the future. The boy grew up, took on the codename Shatterstar and launched a rebellion of his own. Then, hoping to recruit allies, he sent himself back to the current day of Earth-616.

There Shatterstar encountered Cable, who agreed to assist his rebellion if Shatterstar would, in turn, help him establish X-Force. Shatterstar spent years adventuring with X-Force, but after M-Day he left the team to join some of his colleagues in X-Factor Investigations. Shortly thereafter, he came out as gay and began dating Rictor.

Just as X-Factor Investigations was beginning to fall apart, Shatterstar and Rictor were sucked into the past of the Mojoverse. On Mojoworld, a genetic scientist used some of Shatterstar's DNA to create Longshot, effectively making Shatterstar his own grandfather. Realizing this, Shatterstar jumped forward in time and kidnapped himself as an infant, completing the temporal loop.

Once Shatterstar and Rictor returned to the present, they agreed to join Krakoa's Excalibur.

Personality

For a long time, Shatterstar had difficulties being close with others. The survival instincts he developed over the course of his bizarre and traumatic upbringing made it hard for him to be friendly with teammates. Although his relationship with Rictor has somewhat ameliorated these old issues, Shatterstar still has times when he simply needs to be alone.

Real Name: Kenuichio "Ken" Harada
Height: 6'6" **Weight:** 250 lbs. **Gender:** Male
Eyes: Brown **Hair:** Black **Size:** Average
Distinguishing Features: None
Occupation: Criminal
Origin: Mutant, Special Training
Teams: Hydra, Yakuza
Base: Krakoa

History

Kenuichio Harada has been mixed up in the world of organized crime since the day he was born. As the son of Yakuza boss Shingen Harada, Ken spent his youth learning the skills he would need to one day take his father's place. He took to the training like a fish takes to water, immediately excelling both in finance and in hand-to-hand combat. His prowess in battle was enhanced by his mutant power, which allows him to create a tachyon energy field.

After his father was killed in a duel with Wolverine (Logan), Ken assumed his long-awaited place as head of the Harada clan. He immediately entered into a long-term rivalry with Wolverine, setting the entirety of Japan's criminal underworld on a mission to capture and execute the mutant hero.

After being defeated by Wolverine several times, Ken gave up on killing the mutant hero and instead became his friend. On Krakoa, Ken ran a combat arena, one which Wolverine frequently attended.

Personality

Ken Harada styles himself as a feudal-era samurai, but his actions often conflict with a true samurai's code. He initially adopted the identity of the Silver Samurai to intimidate his enemies and underlings, and it worked so well that he just kept doing it. This persona is largely based on the samurai films and comics he consumed as a child.

Harada's ruthlessness is both his greatest strength and his greatest weakness. His determination to get the job done, no matter the cost, allows him to go toe-to-toe with combat experts like Wolverine. However, that philosophy has also led him into making alliances of convenience with evil organizations like Hydra.

Eyes: Green **Hair:** Red **Size:** Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Mutant
Teams: X-Factor, X-Force
Base: Krakoa

History

Sean Cassidy (who later became the hero known as Banshee) was too wrapped up in the world of international espionage to notice when one of his old flames, Maeve, gave birth to a girl named Theresa. Maeve died shortly after the birth, and Banshee's cousin and rival, Black Tom (Thomas Cassidy), kidnapped the infant.

Black Tom raised Theresa to be a criminal, and once she was old enough, he began having her accompany him on his super-villain escapades, as the Siryn. The guilt of a criminal life weighed heavily on her mind, though, and Black Tom couldn't help but regret forcing her into it. After a botched job nearly landed them both in prison, he wrote to Banshee, revealing the truth of Siryn's birth.

She reunited with her father, and under his tutelage, Siryn became a super hero. She joined X-Force shortly after its foundation and quickly became one of its most important members. After M-Day, Siryn moved to X-Factor Investigations and had a son with a duplicate of her long-term partner, Multiple Man. Unfortunately, Multiple Man accidentally absorbed the infant upon first holding him, and their relationship hasn't been the same since.

Shortly after leaving X-Factor Investigations, Siryn was possessed by the dark god Morrigan. She wasn't freed until after the foundation of Krakoa, at which point she dropped out of active duty to focus on herself.

Personality

Even more of a devout Catholic than her father, Siryn believes it is her duty in life to protect as many people as possible. She takes her responsibilities as a super hero seriously and blames herself for any casualties incurred on the job.

History

In order to create a champion worthy of her sacred stature, the Inuit goddess Nelvanna sired a daughter with a hapless archeologist named Richard. She named this child Narya.

From the beginning, Nelvanna had hoped that Richard would be able to take care of their daughter, but the experience of connecting with the goddess had driven him insane. So Nelvanna instead left her daughter in the safe hands of the doctor who delivered her—Michael Twoyoung-men (A.K.A. Shaman).

By the time she was born, Narya was already physically a year old, and she continued to grow rapidly throughout her youth—to the point where, within a few years, she was old enough to take care of herself.

Right around then, both Narya and Shaman were recruited into the Canadian super-team Alpha Flight. She and her father have been with the organization ever since, working tirelessly to protect the people of Canada.

Personality

Snowbird's sacred heritage can, at times, make her seem a bit stuck-up and perhaps even disconnected from regular human society. However, she is much more down to earth than the likes of Thor or Zeus. She grew up on Earth, and most other members of Alpha Flight, the people she considers her closest friends in the world, are Earthlings.

History
As part of the secretive Weapon Plus project, mutant hater and scientist John Sublime stole a sizable portion of Emma Frost's eggs. He used them to create the five Stepford Cuckoos— Sophie, Phoebe, Irma, Celeste and Esme—who are essentially clones of Frost. They each contain minor genetic variations, but they all look like younger versions of Frost, talk like her and have powers similar to hers.

Hoping to use his creations as moles, Sublime inserted the Cuckoos into Professor Charles Xavier's mutant academy. This was a big mistake. With the help of the X-Men, Emma Frost quickly freed the Cuckoos from Sublime's control and made them into regular hero trainees.

Though they are not usually intimidating individually, as a collective, the Cuckoos number among the most powerful young mutants on the planet.

Personality
Much like Emma Frost, the Cuckoos can be aloof. They have trouble forming relationships with anyone outside of their inbuilt psychic network. A few of the Cuckoos have, for brief periods, gone off on their own, but they always return to the fold. The relationship they have with each other is the most important one in their lives.

Although the Cuckoos often appear to act almost identically, they do have subtle differences in their personalities. Sophie is their stalwart heroic leader, while Phoebe is more of a hothead. Irma and Celeste are the shyest members of the crew, and Esme is a bit of a schemer.

Alternate Form
Just like Emma Frost, the Stepford Cuckoos can transform into an alternate crystalline form. This form grants them the Sturdy 1 power, but it prevents them from using the Brilliance 1 power and all their Telepathy and Power Control powers. They can use their Uncanny 1 power in either form.

Numbers before a slash are for the Cuckoos' regular human forms. Numbers after a slash are for their crystalline forms.

Note: The Stepford Cuckoos have identical stat blocks and powers. Individually, they are not nearly as powerful as Frost, but by working together, they can become a force to be reckoned with. Often in combat, one of the Cuckoos goes on the attack while the others hang back and work together to bump up their attacking sister's powers as much as possible.

Real Name: Shiro Yoshida

Eyes: Brown **Hair:** Black **Size:** Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Mutant

History

Shiro Yoshida was raised by two different men with two very different ideologies. His father, Saburo, was a quiet but progressive man, while his uncle Tomo was a raging conservative nationalist. Gradually, Tomo's loud and angry rhetoric infected Shiro, and as Shiro's latent mutant powers began to manifest, Tomo convinced the boy he should use his fiery new abilities to attack the United States.

Shiro was on the verge of burning down the U.S. Capitol when Tomo, in an act of rage, shot Saburo. Shiro immediately turned on his uncle, striking him down while rushing to his father's side. As Saburo died, he made one last request of his son: fight for peace, not for war.

Shiro vowed to fulfill his father's dying wish. He spent the next several years traveling across Japan, making a name for himself as the country's foremost defender.

Although he occasionally left Japan to help superteams from other countries—like Alpha Flight and the X-Men—Shiro never strayed long from home. Not until the founding of Krakoa.

With his loyalties torn between Japan and the new mutant nation, Shiro began to give up his nationalist roots in favor of a more humanist ideology, one that favors the wider success of all society.

Personality

As a young man, Shiro was both highly disciplined and a hothead. Like many fire-based heroes, he was prone to bouts of rage, but at the same time, he romanticized the stoic samurai of Japan's past and worked to become more like them.

Shiro still has some of that angry, wannabe-samurai persona in him, but years of actual combat have tempered his personality into that of a genuinely experienced warrior.

BIOGRAPHY

Real Name: Everett Thomas
Height: 5'11" **Weight:** 165 lbs. **Gender:** Male
Eyes: Brown **Hair:** Black, usually shaved
Size: Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Mutant
Teams: Generation X, X-Men
Base: Krakoa

History

Teenager Everett Thomas discovered his mutant powers during a chance encounter with the X-Men and an evil alien race known as the Phalanx. With concentration, he found that he could synchronize with members of the X-Men, gaining their powers for as long as they remained in his vicinity. He used these new abilities to help them defeat the Phalanx, and the X-Men, in turn, invited him to join their at-the-time-latest junior team: Generation X.

Thomas agreed, but his time with the team didn't last long. He was killed on the field of battle, and Generation X disbanded shortly thereafter.

Years later, the mutant government on Krakoa resurrected Thomas. He tried to pick up his life where he left off, but the temporal disconnect between him and his former teammates left him feeling lonely. This problem only compounded when he and a few other X-Men were caught inside a bubble of highly accelerated time.

These days, Synch is only really close with a single person: his romantic partner Talon, an older version of Wolverine (Laura Kinney) with whom he spent the accelerated-time incident. They have a romantic history stretching back untold centuries, most of which is known only to them.

Personality

Synch may have the body of a young man, but in his mind, he is hundreds of years old. He is, by any metric, an unimaginably experienced combat veteran. He's seen things that would make most veteran X-Men quiver in their boots.

Despite it all, Synch is neither bitter nor angry. He has the mental tranquility of an old man who has made peace with his mortality, such as it is.

Eyes: Brown **Hair:** Black **Size:** Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Magic: Sorcery
Teams: Alpha Flight, Beta Flight
Base: Mobile

History

Following the death of his wife, Michael Twoyoungmen abandoned his daughter Elizabeth and retreated to the woods of northern Canada to learn the mystic secrets of his ancestors. Elizabeth spent the rest of her childhood with a foster family, hearing only whispers of her father's exploits as the hero Shaman.

Her life without Michael was a good one. She never intended to see her father again until an evil spirit began to menace the archaeological dig where she worked. To rid herself of the spirit, Elizabeth was forced to track down her father and request his assistance.

Michael tried—and failed—to dispel the dark spirit. In the process, he discovered that his daughter was the reincarnation of a legendary mystical champion known as Talisman.

With Micheal's help, Elizabeth uncovered the Coronet of Enchantment — an ancient artifact which allowed her to unlock her ancestral powers. Together, she and Michael defeated the dark spirit.

Michael briefly convinced his daughter to join him in the super-hero group Alpha Flight, but old resentments kept the arrangement from becoming permanent. Nowadays, she uses her powers only in times of crisis, acting as backup for the main team.

Personality

If she ever set her mind to it, Talisman might be able to give Stephen Strange a run for his money. She never would, though, as it would take too much time and effort, and she prefers to avoid violence.

There may remain some tension between Talisman and her father, but the rest of Alpha Flight adores her. She's intelligent, chipper and an all-around loyal friend.

BIOGRAPHY

Real Name: Mortimer "Mort" Toynbee
Height: 5'9" **Weight:** 169 lbs. **Gender:** Male
Eyes: Black, originally brown **Hair:** Brown
Size: Average
Distinguishing Features: Unnaturally long tongue
Occupation: Adventurer
Origin: Mutant
Teams: Brotherhood of Evil Mutants, X-Men
Base: Mobile

History
Mort Toynbee spent his childhood in an orphanage where the other kids bullied him relentlessly. Adulthood served him no better, and the punks in his neighborhood took every chance they could to torture him, mocking his strange mannerisms and subjecting him to constant beatings. Then one day, Magneto appeared and offered Toynbee a founding position in the Brotherhood of Evil Mutants, which he accepted without hesitation, taking on the codename Toad.

Unfortunately, the Brotherhood wasn't everything he dreamed it would be. Magneto treated him as little more than a servant, and his other teammates, while not cruel, still considered him their inferior. Eventually, Toad left the group to go into business as a solo operative. He spent the next several years flipping back and forth between super-villain and super-hero work, gravitating toward jobs that served his burgeoning ego.

As time went on, Toad gradually became more confident and sociable. Slowly but surely, he gained the respect of both his former Brotherhood allies and most of the X-Men. Recently, as part of a scheme hatched by Magneto, Toad took the fall for a murder he didn't commit, and the Krakoan authorities considered him a fugitive from justice.

Personality
It's a cruel word, but the best word to describe Toad in his early days is *sniveling*. Filled with self-hatred, he cowered in the faces of both his allies and his enemies. Although he's not entirely free from insecurity, the modern Toad has accepted who he is. Most mutants consider him a decent man who can be counted on in a pinch.

Real Name: Warlock
Height: Varies **Weight:** Varies **Gender:** Male

Hair: Varies, typically black with yellow highlights
Size: Average
Distinguishing Features: Gooey, Techno-Organic body
Occupation: Outsider
Origin: Alien: Technarch, Mutant
Teams: Excalibur, New Mutants, X-Men
Base: Krakoa

History

As a child of the alien species known as the Technarchy, Warlock was expected to do one of two things when he came of age. He was to either kill Magus, his father, or else die by his father's hand. Refusing to do either, Warlock fled to Earth. Injured and alone, he wandered onto the premises of Xavier's School for Gifted Youngsters, then the home of the New Mutants.

In a haze of confusion and fear, Warlock attacked the young heroes. Thankfully, with the help of their linguistically gifted associate Doug Ramsey (Cypher), the New Mutants eventually made peace with Warlock and convinced him to join their team.

In the years since, Warlock has become a trusted and world-renowned hero. Although his adventures have, at times, taken him across the galaxy, he's never strayed far from the company of the New Mutants, who love him with all their hearts.

Warlock remains particularly close with Doug Ramsey and has spent some stretches of his life fully or partially merged with him. In their fused state, Ramsey and Warlock are referred to collectively as Douglock.

Personality

Warlock speaks in a strange and robotic dialect unique to members of the Technarchy. He does not use the pronoun "I," instead referring to himself only as "Warlock" or "Self." When speaking of others, he often compounds names with other terms. For instance, he might refer to his friend Doug Ramsey as "selffriend" or "Doug-friend."

Despite his alien mannerisms, Warlock is as kind and gentle a soul as exists on Earth. On Krakoa, he spent much of his time entertaining the children there with wacky acts of shape-shifting.

Real Name: James "Jimmy" Proudstar
Height: 7'2" **Weight:** 350 lbs. **Gender:** Male
Eyes: Brown **Hair:** Black **Size:** Average
Distinguishing Features: None
Occupation: Adventurer
Origin: Mutant
Teams: New Mutants, X-Force, X-Men
Base: Arizona

History
Jimmy Proudstar grew up on an Apache reservation in southern Arizona alongside his brother, John. The boys were born with similar mutant super-powers lurking in their DNA, but John, as the older of the two, had his manifest first.

Having always dreamed of being a hero, John left home and joined the X-Men under the codename Thunderbird, only to be tragically killed on one of his first missions. Blaming the X-Men for his brother's death, Jimmy took on the codename Warpath and attempted to annihilate the mutant hero team.

Jimmy eventually made peace with the X-Men and even agreed to join their organization, but his anger over his brother's death never fully went away. Even as years passed and Jimmy gradually became a veteran member of many important super-teams, his resentment lingered.

Only with the foundation of Krakoa and John's subsequent resurrection did Jimmy finally begin to forgive and forget.

Both of the Proudstar brothers remain active heroes, but lately, John has been spending most of his time taking care of their ailing grandmother in Arizona. Jimmy, on the other hand, splits his time between helping his grandmother and acting as a mentor to the New Mutants.

Personality
As opposed to his more levelheaded brother, Warpath has a no-nonsense attitude and a penchant for bouts of righteous rage. Age has somewhat tempered his harder edges, but his sheer determination for obtaining justice, no matter the cost, continues to make him a key component of more militant mutant groups. Few mutants can claim as much experience in battle as Warpath.

BIOGRAPHY

Real Name: Kyle Gibney
Height: 5'8" **Weight:** 152 lbs. **Gender:** Male
Eyes: Blue **Hair:** Blond **Size:** Average
Distinguishing Features: Minor wolflike features (pointy ears and teeth, claws, etc.)
Occupation: Adventurer
Origin: Mutant
Teams: Hellions, Gamma Flight
Base: Krakoa

History

Kyle Gibney's mutant powers give him the proportional strength and agility of a wolf, but left untreated, they also give him the mind of a wolf. These powers manifested suddenly in his early childhood, and by the time agents of the Canadian government discovered him living alone on the streets, he had gone almost entirely feral.

Scientists within Canada's secretive Department H developed a treatment for Gibney's condition, allowing him to retain some semblance of intelligence. In exchange for this treatment, Gibney agreed to join Gamma Flight, which was then the department's super-hero trainee program.

The original Gamma Flight disbanded shortly after Gibney joined it, but his friends in Alpha Flight managed to pick up where the government left off, training him and administering his medication.

Gibney eventually left Alpha Flight, feeling himself unworthy of a position in their ranks. He's spent the time since bouncing around between various shady agencies and organizations, working for anyone who could provide his treatments. He currently works for the Krakoan strike team known as the Hellions, alongside other mutants with hard-to-control powers.

Personality

When he's taking his meds, Gibney can be softhearted and sensitive. The moment he stops, though, that all fades. Slowly but surely, he becomes an angry, ruthless predator. He is then prone to lash out at anything and anyone in his immediate proximity. In this state, he can speak only in grunts and roars.

Eyes: Green **Hair:** Red **Size:** Big
Distinguishing Features: Werewolf-like appearance (in alternate form)
Occupation: Adventurer
Origin: Mutant
Teams: New Mutants, X-Factor, X-Force, X-Men
Base: Krakoa

History

Rahne Sinclair's lycanthropic powers manifested suddenly in her teen years, and the religious zealots who ran the insular Scottish community where she grew up did not take kindly to her new appearance. She was forced to flee her hometown, but she wound up in the relative safety and security of Xavier's School for Gifted Youngsters.

Early in her stay at the school, Sinclair and a few other students helped to save Professor X from a plot that threatened his life. He was so impressed with the conduct of his charges that he formed a junior super-hero squadron just for them: the New Mutants.

To this day, the friends Sinclair made in the New Mutants are the most important people in her life. After they graduated from Xavier's school, many of them followed Sinclair into X-Force, becoming founding members of yet another super-hero team.

Sinclair was tragically beaten to death by mutant bigots, but the founding of Krakoa ensured that the time she spent dead was short. Since her revival, Sinclair has spent most of her time on Krakoa, palling around with her old comrades and lobbying for the resurrection of her son, Tier.

Personality

In her human form, Sinclair is shy and soft-hearted, but in her wolf form, she is vicious, uncommunicative and prone to bouts of rage. Her greatest worry is that she might, in one of her berserker states, lash out at the ones she loves. Raised Catholic, she sometimes still wrestles with fears that her powers were a gift from Satan.
