INTRODUCTION

Hello!

My name is Mark Waid. I have written nearly a thousand DC comics (and counting), researched and produced the 2025 miniseries New History of the DC Universe, which recounted in meticulous detail DC continuity from its earliest beginnings to the present day, and, as a fan and researcher, I have read more DC comics than you probably imagine exist. As someone who has been passionate about the adventures of Superman, Batman, Wonder Woman and all their friends and enemies since the age of three, I know this universe like the back of my hand. That is why I consider it a tremendous privilege to present to you: Justice League Unlimited RPG, the most ambitious, most comprehensive and most up-to-date DC roleplaying system ever produced.

WHAT IS THIS GAME?

This is a quickstart, a fast version of Justice League Unlimited Roleplaying, a roleplaying game set in the fantastic universe of DC Comics, where powerful Kryptonians fight side by side with determined Amazons and unstoppable humans.

Imagine a game of make-believe, but with rules that help to support the narrative.

A GAME OF HEROES

Heroes are at the center of Justice League Unlimited. Heroes are the light in the darkness, beacons of hope amid the indifference of the world, and they do what is right.

Doing what is right goes far beyond foiling the plans of an evil villain: it means protecting entire cities, saving victims of natural disasters, and much more. Heroes inspire, fight to defend, and help everyone from the smallest insects to the mightiest worlds.

HOW DO I PLAY THIS?

In a roleplaying game like this, the first and most important step is to gather your own Justice League: your friends. With your team assembled, you will need the tools of the trade: a set of polyhedral dice (d20, d12, d8 and d6), paper for your hero sheets, a pencil, an eraser and, most crucial of all, a boundless imagination.

One of you will take up the special mantle of Editor. This person is responsible for presenting the story, giving voice to every citizen in danger and every megalomaniacal villain, and proposing the challenges that will test the heroes' courage. And yes, from time to time, it is the Editor's duty to do the funny voice of the little old lady who was rescued from a burning building and cannot stop thanking her saviors.

THE DICE

In the JLU RPG, fate is shaped by courage, but chance has its say. Its voice belongs to the dice. The game uses four different types of dice to determine the outcome of uncertain actions:

- the twenty-sided die (d20),
- the twelve-sided die (d12),
- the eight-sided die (d8),
- the six-sided die (d6),
- and sometimes 1d3, which is a d6 divided in half (1-2 = 1, 3-4 = 2, 5-6 = 3).

ROLLING DICE

The basic mechanic that governs moments of uncertainty in the JLU RPG is the roll of a twenty-sided die (d20). Whenever a Hero attempts an action whose outcome is uncertain or whose failure carries real risk, they must make a Test.

Test Result	=	1d20	+	Relevant Attribute	+	Bonus
-------------	---	------	---	--------------------	---	-------

This result is then compared to a target number defined by the Editor, known as Tension.

THE EDITOR

Every great comic book saga is guided by the hand of a good editor, and in Justice League Unlimited RPG this tradition continues. The Editor is responsible for presenting the story, giving voice to every citizen in peril and every megalomaniacal villain, and proposing the challenges that will test the heroes' courage. As a good Editor, you are not the players' adversary - you are your Heroes' biggest fan, but you roleplay their enemies.

THE HEROES

Alongside a great Editor, captivating protagonists are the driving force behind any great comic book. In JLU RPG, you are those protagonists. By playing a Hero, you take on the leading role in a saga, interacting with the dynamic world proposed by the Editor, overcoming impossible challenges, and forging connections with those you save and with your teammates.

CORE CONCEPTS

ISSUE

An Issue is the name given to a JLU game session. It begins when everyone gathers to play, and the Editor starts narrating the streets of Metropolis or the alleyways of Gotham. It ends at that perfect moment of tension with a 'to be continued in the next issue...' feeling.

SCENE

Throughout the game, you will come across the term "scene" many times. A scene is a narrative segment, such as a confrontation in the streets of Gotham or a moment of relaxation in the Watchtower cafeteria. If you are unsure about how long a scene lasts, think of the pages of a comic book: if, from one page to the next, the story's narrator adds "**meanwhile**" or "**Metropolis-8:00 AM**" in the corner of the panel, a new scene has begun.

THE TIERS

Tiers are the foundation of much of JLU RPG: Heroes, villains and dangers are categorized accord-

ing to them. Think of a Tier as a kind of "level" that beings in this universe occupy. But remember: supernatural abilities and fantastic powers are not the only things taken into account: Their impact on the world, experience, and even popularity all factor into this dynamic.

Tier E represents the lowest level, comparable to the power of an ordinary human. Heroes and Villains begin to be classified starting at Tier D. Other threats, such as natural disasters, experiments gone out of control, alien invasions and humanitarian crises, also follow the same classification logic.

E - Ordinary human.

Basic threat or danger, such as theft or assault with a bladed weapon.

D - Beginning of meta-activity.

Novice vigilantes, incidents involving lower-scale powers.

C - Urban level.

Individuals capable of wreaking havoc on an entire city.

B - Powerful enough to trouble a nation.

Heroes at this level face small armies and possess advanced abilities.

A - Global level.

Capable of interacting with and impacting the entire planet.

S - Legendary level.

The mere mention of the name is enough to shake the multiverse.

ATTRIBUTES

In JLU RPG, Attributes are the basic measures of a Hero, representing their fundamental capabilities in different areas such as strength, dexterity and ingenuity. Attributes play a central role in the system, as they serve as the foundation for dice rolls and the resolution of actions during play. The six **Attributes** are **Potency**, **Accuracy**, **Agility**, **Resistance**, **Mind** and **Spirit**.

RESOLVE

Resolve is a vital resource for a Hero, as it represents both their ability to keep fighting and the energy required for extraordinary feats, activating powers, or resisting adverse effects. In practical terms, Resolve measures how much energy your Hero has to keep enduring blows, as well as how much energy they have to fuel their powers and abilities. For example, a Hero may start a Round with 15 Resolve points but then they might take a blow that deals 6 points of Resolve damage ($15-6=9$). In the same Round, the Hero activates their Blast power, spending 2 more Resolve points ($9-2=7$), leaving them with 7 points remaining.

Resolve is calculated using your Tier base value plus your Spirit value.

CONDITIONS

Conditions are dangerous states a Hero can enter. Each Hero has 5 Condition Boxes. When Resolve runs out, the character marks a Condition. When an attack deals 10 or more points of damage at once, a Hero or Villain may choose to mark a Condition instead of losing Resolve.

Tired: The fight is dragging on; you start to gasp and lose your breath.

Scratched: It was just a scratch. There's still plenty of fuel left to burn. Apply -2 to all d20 rolls.

Injured: That hurt. Not enough to stop you, but it hurts. Apply -4 to all d20 rolls.

Wounded: Time to start worrying. Apply Disadvantage to all d20 rolls.

Defeated: The Hero is out of action and at the Editor's mercy. Their fate will be decided by the course of the story.

POWERS

Powers are what define your Hero's fantastic abilities, whether that means fighting with swords, firing blasts from their hands, controlling fire, or casting spells. In this quickstart, we present three categories of Powers: Superpowers, which include mutations and abilities derived from biology; Martial Training, which covers everything from the use of staffs, and one's bare hands, to ranged weapons like guns; and Technology, which, when sufficiently advanced, is indistinguishable from any superhuman ability. Each Power has Grades ranging from 1 to 5, limited by a character's Tier.

PLOT POINTS

Whenever things are dire, a Hero can call for the oldest forces known in the universe: the Plot. Plot Points are the narrative tool that grant players the power to twist fate itself. They can be used to enact a wide range of effects — usually the ones that would otherwise feel a little too convenient.

Using Plot Points

Every player starts the game with 0 Plot Points, but they can be acquired through the usage of abilities and at the Editor's discretion, typically whenever a Hero pulls off an outrageous comic-bookish stunt. But be cautious, using Plot Points may stress the very foundation of the universe, triggering the **Crisis Die**.

When you spend a Plot Point, choose one of the following effects (but do not feel limited to them):

Guarantee Success: Turn a failure into a success. Did you roll the dice and come up short? Spend a Plot Point. Not only do you succeed, you do so in spectacular fashion. Alternatively, you may spend it before rolling to add +5 to the result.

Plot Armor: You face a blow that should have been the end. Spend a Plot Point to completely negate an attack or effect that would have targeted you, describing how you narrowly escaped.

Rewrite the Script (or Retcon): Change a fact already established in the story. Spend a Plot Point to introduce one of the following twists:

- **"I prepared for this":** You reveal that you have been carrying a specific item (not a superpowered one) all along.
- **"Luckily, I know someone":** An old ally or contact unexpectedly appears to offer help.
- **"Wait, I know their weakness!":** You remember a crucial detail, revealing a new temporary Limitation on the villain.

Power Increase: You push beyond your limits. Spend **1 to 3 Plot Points**. For the rest of the scene, for each point spent, treat one of your Powers as though it were **one Grade higher**. At the end of the scene, mark a number of Conditions equal to the number of points you spent.

Introduce a Fact: Add a convenient detail to the scene. Spend a Plot Point and declare a plausible fact about the environment that gives you an advantage during that scene.

EDITORIAL POINTS

The Editor has their own way of shaping the narrative: the **Editorial Points**. Whenever a player uses a Plot Point, an Editorial Point enters the Editor's arsenal. The Editor may hold a maximum number of Editorial Points equal to the number of players and may spend only **one per Scene**, ensuring that their use remains impactful without becoming oppressive.

Introducing an Editorial Complication

When the Editor spends an **Editorial Point**, they may introduce an **Editorial Complication** by choosing one of the following effects:

Editor's Note:

The Editor adds an immediate twist to the scene. Think of those moments in comic books when everything seems fine, the villain has been defeated, and the day has been saved. Then something happens! Henchmen, a clone, an even more powerful villain: there are countless possibilities.

"This is my True Form!"

The form the villain has held up till now was not their final one. In truth, they were holding back all along. This is their real and more powerful form.

The Toyman who has just been defeated reveals himself to be (yes, you guessed it) a mechatronic toy built to deceive the Heroes. From afar, you hear laughter and the sound of heavy robotic footsteps: he is piloting a giant doll-shaped robot.

"He has a new trick!"

The villain reveals they have a power or piece of equipment they had not previously made use of.

Example: The Heroes have easily defeated the Penguin's henchmen. The Editor spends an Editorial Point and announces:

THE MOMENT THE LAST HENCHMAN FALLS, ONE OF THE PENGUIN STATUES IN THE HALL OPENS UP, REVEALING AN AUTOMATIC MACHINE-GUN TURRET.

	Crisis Die Result	Effect
1	Power Loss!	Until the end of the Issue , the group of Heroes lose all of their powers. Powers that do not depend on external sources or genetic factors, such as martial arts, remain.
2	Identity Crisis!	Some strange affliction has befallen the Heroes. Until the end of the Scene , they must swap character sheets with the player to their left.
3	I, Evil!	A dark version of one of the Heroes appears!
4	Multiple Crises!	Roll 2D20 on this table. Whatever the results, they happen simultaneously.
5	Catastrophe!	A natural disaster such as a tsunami, earthquake, or hurricane threatens the city!
6	Negative Public Opinion!	A fresh newspaper story, perhaps not too concerned with the truth, has just torn the team apart.
7	Meta Crisis!	Somehow, the inhabitants of the area have gained metahuman powers! That is definitely going to be a problem.
8	Villain Ally!	An enemy temporarily joins the group. What are their true intentions?
9	An Old Enemy Returns!	Somehow... They returned.
10	Time Traveler!	A time traveler appears. They bring bombastic news!
11	Portal to the Past!	A portal to the distant past opens! It may unleash dinosaurs, Roman gladiators, Vikings, or even pull the Heroes into the Old West!
12	Heroic Betrayal!	An ally of the Heroes turns against them. What could be the reason for this treachery?
13	Alien Invasion!	A ship arrives on Earth and makes the announcement: an invasion is coming, and all Earthlings must surrender. Dominators? Parademons?
14	It Was an Illusion!	The most recent events of the last Scene were an illusion. Perhaps caused by magic, holograms, or even memory manipulation.
15	It Was a Clone!	An important Editor Character turns out to be a clone!
16	Involuntary Teleportation!	A boom tube opens, taking the group of Heroes to some unknown location.
17	Portal to the Future!	A portal to the future opens! Out come futuristic robots, an alternate-timeline version of one of the Heroes, or the Legion of Super-Heroes in need of help!
18	Judgment!	An organized group wants to put the Heroes on trial for crises they supposedly caused!
19	Gods on Earth!	Entities such as the New Gods, the Greek pantheon, or some lesser deity appear!
20	New Powers!	The Heroes develop new abilities: until the end of the Issue , they gain a new power, chosen by the Editor.

Villainous Monologue:

The villain pauses the action to make a speech. They reveal part of their plan or mock the Heroes. While they speak, the Heroes are momentarily paralyzed by the drama. At the end of the monologue, the villain recovers all of their **Resolve** points.

Example: Lex Luthor's armor is damaged. The Editor spends an Editorial Point:

Luthor laughs over the comms.

YOU THINK YOU HAVE WON? FOOLS. WHILE YOU WERE BUSY WITH MY TOY, MY REAL PLAN WAS ALREADY UNFOLDING...

The Editor then restores all of Luthor's **Resolve** points.

Introduce a Surprise Element:

A mysterious figure enters the scene, not necessarily as an enemy. They may be a rival of the villain, a civilian with a secret or a third faction.

Example: Wonder Woman is about to defeat Cheetah. The Editor spends an Editorial Point:

SUDDENLY, FROM THE SHADOWS, A GROUP OF ASSASSINS FROM THE LEAGUE OF SHADOWS EMERGES. ONE OF THEM TURNS TO CHEETAH AND SAYS, 'RA'S AL GHUL REQUIRES THE ARTIFACT, CURSED ONE!' WHAT WAS A TWO-SIDED FIGHT HAS NOW BECOME A THREE-WAYSTANDOFF

CRISIS DIE

The history of the DC Universe is permeated by crises: catastrophic events that completely change the status quo. The Crisis Die is a d20 containing 20 random and often catastrophic twists that can upend the story like time traveling, villains returning, and even power shifting!

Rolling the Crisis Die:

When the Heroes overuse the power of the narrative, the universe reacts. At that point, the Crisis Die is triggered. Whenever a player uses a Plot Point, they must roll a d6: If the result is equal or inferior to the number of Plot Points used on that Issue, a Crisis Die is triggered. The Editor rolls 1D20, compares the result to the table on page 7, and applies the relevant effect. After that, Plot Points cannot be used again during that Issue.

Example: During the final battle with Bane, the Hero Ice Fist receives a shattering blow. Refusing to fall, Ice Fist declares that his old master taught him the Spine-Enhancer Technique! The Editor grants Ice Fist a Plot Point for his impressive creativity, and the Hero uses it as Plot Armor!

During this Issue, the Heroes have used Plot Points a total of three times, with Ice Fist's use being the third. A d6 is rolled, and the result is 2, which is lower than the number of Plot Points used in this Issue, triggering the Crisis Die.

The Editor rolls the Crisis Die and gets a 5: **Catastrophe!** The ground begins to crack and split apart as a massive earthquake hits Gotham City!

CHARACTER CREATION IN BRIEF: THE SEVEN STEPS

Define the Tier: Tier defines the scope of a Hero. In this quickstart, we provide Tier D and Tier C.

Choose an Origin: A Hero's Origin is a combination of culture, biology and sometimes the source of their power. Choose between **Human**, **Kryptonian**, or **Meta-Human**.

Choose an Archetype: An Archetype is a comic book trope that a Hero follows: the ones provided in this quickstart are **Champion of Tomorrow**, **Dark Knight**, **Genius** and **Enraged**

Distribute the Attributes: Assign your Hero's basic talents: **Potency**, **Accuracy**, **Agility**, **Resistance**, **Spirit** and **Mind**.

Tier	PAX	Resolve	Defense	Attack Bonus	Damage Die	Attribute Limit	Power Limit
D – Year One	40	12	15	+1	1d6	+6	Grade 2
C – Local Hero	60	15	18	+2	1d6	+9	Grade 2

Choose your Powers: Your tools for fighting evil.

Determine Knowledge and Traits: Knowledge represents acquired expertise, while Traits are unique qualities possessed by your Hero.

Final Details: Your Hero's name, weakness and soul.

HERO TIER

Tier determines a Hero's level. Wonder Woman is not on the same level as Wonder Girl, even though both possess similar abilities. Tier defines a Hero's Attributes, available **PAX**, **Resolve**, combat values such as **Defense**, **Damage Die**, and **Attack Bonus**, as well as the maximum limit for an Attribute's value.

Tier: Some abilities indicate that you should use a bonus equal to your Tier. In this case, in ascending order, treat **Tier D** as the starting point, with a value of **1**, and **Tier S** as the final point, with a value of **5**. As for Tier E the value is zero.

Tier also imposes limits on a Hero's Attributes and Powers. In the case of the **Attribute Limit**, this refers to values purchased directly through **PAX**. However, this limit can be exceeded through certain Powers. For example, if a Tier D Hero spends 10 PAX to reach **+6 Potency**, they may still go beyond that value if they possess **Super Strength**. In the case of the **Power Limit**, it means that only one Power may have the listed Grade, while all other Powers must remain at a lower Grade.

PAX

PAX represents a Hero's full potential. They are the means through which a Hero purchases and improves various abilities. Players may be awarded Ascension Points during or at the end of a game session. **PAX** are the currency used to buy powers, knowledge, traits and other details for your Hero.

Advancement	Cost
Attribute Increase	5 PAX for each +3
Power Purchase	Variable
Traits	4 to 12 PAX
Knowledge	4 PAX
Increase Resolve	2 PAX for each 1 point

ATTRIBUTES

Attributes are represented by numerical values in ascending order. If a Hero has **+3 Mind**, they are not as intelligent as one who has **+9** in that same Attribute. For Heroes, Attributes increase in multiples of 3. Each Attribute increase costs **5 PAX**. Although Attributes are expressed as modifiers, their representation and capabilities are entirely narrative, depending on the creativity of the player using them and the permission granted by the Editor for the Scene.

Potency

Potency Tests can be used for:

Feats of Strength: Lifting a bus to save a trapped civilian, holding up a collapsing bridge beam, or hurling a car at an opponent.

Destruction: Forcing open a reinforced steel door, breaking handcuffs, or punching a hole through a concrete wall.

Physical Intimidation: Using your size and strength to coerce a henchman into talking, without necessarily throwing a punch.

Accuracy

Accuracy Tests can be used for:

Attacks: Striking an opponent directly, whether by landing a punch or firing a projectile.

Delicate Tasks: Disarming the trigger of an apocalyptic device, performing field microsurgery, or disabling an alarm without setting it off.

Sleight of Hand: Hiding an important object in the palm of your hand or planting a tracking device on a target without them noticing.

Agility

Agility Tests can be used for:

Dodging: Avoiding a hail of bullets, leaping away from an explosion, or evading an enemy's strike.

Acrobatics: Running along the side of a skyscraper, leaping between rooftops, balancing on a narrow surface, or contorting yourself to escape restraints.

Stealth: Moving silently to avoid detection by guards or sneaking through an enemy base.

Initiative: Reacting faster than your opponents at the start of a combat or crisis scene.

Resistance

Resistance Tests can be used for:

Enduring Hardships: Surviving days of travel through a desert, holding your breath for long periods underwater, or resisting extreme heat or cold.

Resisting Harmful Effects: Fighting off the effects of the Joker's poison gas, resisting disease or enduring exposure to radiation.

Absorbing Impact: Withstanding the force of a great fall or the punch of a super-strong enemy, reducing its effects.

Maintaining Concentration: Keeping a power or spell active even while taking damage.

Spirit

Spirit Tests can be used for:

Willpower: Resisting torture, Gorilla Grodd's mind control or fear-inducing illusions.

Social Presence: Calming a panicked crowd, persuading a guard to let you pass, deceiving a villain or inspiring your teammates to keep fighting.

Magic: Channeling mystical energy to cast a spell or communicating with astral entities.

Intuition: Having a gut feeling about a trap, sensing someone's true intentions behind their words or feeling a supernatural presence.

Mind

Mind Tests can be used for:

Investigation: Searching for clues at a crime scene, noticing something out of place in a room or following a complex trail.

Knowledge: Recalling a crucial fact about ancient history, identifying the chemical composition of a substance, or remembering the weakness of a mythological enemy.

Tactics and Strategy: Deducing the next step in a villain's plan, finding the best infiltration route into an enemy base, or coordinating a team attack.

ORIGIN

A Hero's **Origin** represents their starting point. It is a combination of biology, culture, and upbringing. Perhaps they came from a distant planet that was destroyed, were created in a laboratory or descended from a noble lineage beneath the ocean.

Power Kit: Each Origin offers Heroes a unique list of predefined powers, called a **Power Kit**. During Hero creation, the player may choose **one Grade** in a Power from that Kit for free.

Buying Other Powers: Can a Kryptonian master electric powers? Can an Amazon be touched by the Speed Force? Yes. Although uncommon, it is not impossible for a Hero to gain powers that are not typical of their Origin. Whenever this happens, the power costs **double the PAX per Grade**. **Humans** are the exception to this rule and cannot buy any powers from outside of their Power Kit.

Amazon

Fueling countless legends, the Amazons are a civilization of female warriors originating from the island of Themyscira, with roots in ancient Greece. Raised by the gods of the Olympian pantheon, Amazons are trained from a young age in the arts of war and strategy, such as archery, swordsmanship, and hand-to-hand combat.

Amazon Origin Powers Kit

- Super Strength
- Enhanced Resistance
- Superhuman Speed
- Combat Training

Amazon Equipment

You receive an Amazon Armor that grants you DR equals your Tier+1, and an Amazon Sword that grants you +2 on your Attack rolls and +1 in Damage.

Divine Longevity

Amazons are beings created by deities, and can live forever if they are not harmed. Every Amazon receives the Perennial Trait.

Sisters in Arms

You receive the Affiliation [Themyscira] Trait.

Perennial (Trait)

Time has no power over you. Whether by divine blessing, a scientific accident, or your unique biology, your body has stopped aging. You are immune to its effects. It is a natural process and one cannot die of old age.

I remember that!: Once per Issue, when you come across a historical figure, event, or culture, you can state that you remember it. The Editor will tell you an important fact about that figure.

Human

Human Power Kit

- Martial Training
- Technology

Only Human

Humans cannot purchase Powers outside their Power Kit.

Versatility

Your Hero gains one Knowledge and one Simple Trait.

Kryptonian

Kryptonian Origin Power Kit

- Energy Blast
- Invulnerability
- Enhanced Resistance
- Enhanced Senses
- Super Strength

- Super-Breath
- Superhuman Speed
- Flight

Blood of Krypton

You gain a bonus to **Potency** and **Damage Reduction** equal to your Tier. Whenever your Tier increases, both the bonus and the Damage Reduction increase as well.

Limitations

When exposed to green Kryptonite, Kryptonians lose access to all their powers and become Vulnerable. Unless they are under the effects of a yellow sun, Kryptonians lose their Powers.

Meta-Human

Meta-Humans are individuals who possess the **meta-gene**, a mutation capable of granting its bearer a vast range of abilities. Since no two meta-genes are alike, the variety of powers available to Meta-Humans is virtually limitless. They come in all types, shapes, and sizes, and are most commonly found on planet Earth.

Meta-Human Power Kit

Meta-Humans do not receive a free Power. Instead, they may purchase any Superpower at its normal cost.

ARCHETYPES

Each Archetype grants access to unique traits and special abilities that reflect its philosophy. Think of it as the 'why' behind your superheroics, the motivation that drives your Hero to act. Choose carefully, because your Archetype will guide the way you interact with the world and the way the world reacts to you.

When you choose your Archetype, at **Tier D** you gain **two** abilities from it.

Champion of Tomorrow

You carry hope wherever you go. As the **Champion of Tomorrow**, your presence inspires civilians, motivates allies, and makes villains hesitate. The community expects great things from you and the eyes of the world are always upon you. Be the beacon in the darkness and a symbol of justice.

Examples: Superman, Black Lightning and Wonder Woman.

Code of Conduct

The Champion of Tomorrow's Code of Conduct is what guides your heroism. This code is your compass and if you break it, you lose all of your **Resolve** points. Choose one of the options below:

Set the Example: You do not use excessive force in the fight against villainy. Whenever you leave a villain **Wounded**, you must offer them a chance to surrender.

Render Unto Caesar: You follow the law of humankind and may not place yourself above justice. You must always obey the law and follow lawful orders.

Protection: You must always prioritize the rescue of innocents. As long as people are in danger in the game, you must save them before doing anything else.

Champion of Tomorrow Archetype Abilities

Inspiring Presence
Once per **Round**, if your allies can see or hear you, you may spend **3 Resolve** to inspire them. All allies gain a bonus equal to your **Tier** on their next roll.

No One Gets Left Behind!
Once per **Scene**, when an ally or civilian would suffer **Damage**, you may instantly move to them, intercepting the blow or hazard that would harm them and taking the **Damage** in their place. Regardless of the amount of **Damage**, you mark one **Condition**.

Classic Heroism
In a **Rescue Scene**, you do not spend **Resolve** when taking your first action. This ability

ignores the rule that every Activation must cost at least 1 Resolve.

Truth and Justice

You have a nose for lies and corruption. Once per Scene, you may spend **4 Resolve** to count as having scored an automatic success on Tests involving revealing the truth, exposing the unseen, or uncovering corruption.

Dark Knight

You have learned to use shadows and darkness to your advantage. As a shadowy vigilante, you fight in the night using stealth tactics, martial arts and specialized gear. Perhaps you are a member of the Bat-Family, or perhaps you come from a lineage of shadow assassins. Either way, you are fast, precise and deadly.

Examples: Nightwing, Batman and Midnighter.

Feet on the Ground

While others fly, shoot beams from their eyes, and command the elements, you have other ways of fighting villainy. The only Powers a **Dark Knight** may have above **Grade 1** are **Martial Training** and **Technology**.

Dark Knight Archetype Abilities

I Am the Night

Once per Scene, as long as no one is looking at you and you are not restrained or prevented from moving, you may disappear and reappear in another adjacent Zone.

Martial Artist

You gain Grade 1 in Martial Training.

Utility Belt

You have a belt with exactly the right gear for any situation. Need to reach the top of a building quickly? You have a grappling gun. Need to lose your enemies? Smoke bomb them. Once per Scene, you may spend **3 Resolve** to gain a suitable item that helps you overcome a challenge narratively (night-vision goggles, a grappling line, a gas mask and so on).

Prep Time

You possess special training, a contingency plan, or some other extremely useful skill that helps you at the last possible moment. Once per **Issue**, when you use your **Prep Time**, you gain **1 Plot Point**.

Genius

In a world of powerful aliens and capricious deities, you know that the mind is the most powerful weapon of all. Your brilliant intellect has taken you to places that even the most fantastic powers could not. You know that planning is essential to action and having an ace up your sleeve never hurts.

Examples: Mr. Terrific, The Atom, and Lex Luthor.

Overthinking

Sometimes you freeze while considering the countless possible outcomes. You suffer **Disadvantage** on your **Initiative** rolls.

Genius Archetype Abilities

Checkmate

Everything is clear, like a chessboard. Once per Scene, you may spend 1 Action to move an ally who is within the same Zone as you. You may move them out of danger, place them strategically between yourself and an opponent, or simply put them in the perfect position for an attack.

It's Trivial!

Whenever you come across an artifact, device, vehicle or something similar, you automatically understand the basics of how it works. Given enough time, you can also repair any kind of mechanism created on Earth.

Technological Knowledge

You gain 1 Grade in a Technology Power.

Blabblalogy

Once per **Issue**, when you encounter advanced technology, an ancient tale, a strange substance or something similar, you may launch into an extended scientific explanation. When you do, you gain **1 Plot Point**.

Enraged

Raw, concentrated power, charging at the enemy like a true wrecking ball on the battlefield. The **Enraged** is a living weapon of war, ready to go all out and unleash all of their fury.

Examples: Big Barda, Kilowog, and Hawkman.

Collateral Damage

You hit first and ask questions later. In a Scene, you cannot help civilians until the threat has been completely neutralized.

Enraged Archetype Abilities

Everything in the Ring

Choose one enemy who is fighting you. Until the end of the Scene, whenever the two of you fight each other, both of you gain **Advantage** on **Attack** and **Damage** rolls.

Chain Breaker

You can tear through structures as though they were nothing. Once per Scene, spend **2 Resolve** to break a barrier, such as a steel gate, mystical bindings or reinforced walls.

Red with Rage

Once per Scene, when you mark Wounded, you gain a bonus equal to your **Tier +2** on your **Attack** and **Damage** rolls until the end of the **Scene** or until you recover from that Condition.

Cardboard World

Once per **Issue**, when you face a situation in which you can unleash the full extent of your powers—such as a powerful enemy or an almost insurmountable obstacle, deliver a speech about how you no longer need to hold back. Your **Damage Die** increases by one step until the end of the **Scene**.

POWERS

Acquiring Powers

A Hero's **Origin** defines which Powers are within their reach. In addition, each Power has each power has a **PAX** cost, indicated in its description. The cost refers to one **Grade** of that Power; for example, if a Power has a cost of **3 PAX**, you must spend **6 PAX** to have it at **Grade 2**. When you acquire a Grade in a given Power, you gain all the abilities listed at that Grade, unless otherwise specified.

Using Powers

Each Power provides a set of abilities according to its Grade (see below). When a Hero acquires a Grade in that Power, they gain access to all of them. The use of these abilities requires an **Activation**, which is the number of Actions spent on that Power, and a **Resolve Cost**, which must be paid when the ability is used. Some abilities have the **Passive** descriptor, which indicates that they are always active.

Cost: This is the amount of **Resolve** spent to use a given Power. As a rule, the cost can never be

reduced below **1 Resolve**. Some specific abilities, such as the **Champion of Tomorrow's Classic Heroism**, clearly state that there is no Resolve cost and can therefore remove the cost entirely.

Duration: Some powers create effects whose duration is given in their description; this indicates how long the power remains active. Duration may vary between **Turns**, **Rounds**, or even the entire **Scene**.

Example of a Power: Force Field

Force Field — Name of the Power

3 PAX per Grade — Amount of PAX required to obtain that Power per Grade

Grade 1 — Grade of the ability

I Won't Hold Much Longer! — Name of the ability

Activation: Reaction — Actions required to use the ability

Cost: 1 Resolve — Resolve cost to activate the ability

When you declare that your force field will not last much longer, it gains a bonus equal to twice your **Grade in this Power** to **Defense** and **Damage Reduction**. The Force Field is dismissed at the end of this **Turn**.
— Description of the ability

GRADES

Each Grade provides a set of abilities, and a Hero of that Grade has access to all of them. These abilities have an **Activation**, which indicates the number of actions spent to activate them, and a **Resolve cost** in their description. Some abilities are **Passive**, which means they do not require activation, having continuous or specific effects that happen without requiring the user to spend actions.

Grade 1 — The Whole Neighborhood!

Represents the most basic level of that power. A **Pyrokinetic** can control small flames and manipulate bonfires, a **Martial Master** has just completed their training, and a **Speedster** can cross several city blocks at an impressive speed.

Grade 2 — The Whole City!

Things are starting to get more interesting. A **Grade 2 Illusionist** is capable of creating illusions the size of houses, a **Swordsman** has enough skill to rival the greatest masters in the country, and someone with **Super Strength** can throw cars as if they were made of paper.

CATEGORIES

Martial Training

This category encompasses specialisation in many different forms of combat. Whether that be the monastic learning of traditional martial arts, military training focused on guerilla tactics and armed combat, or the mastery of a melee weapon.

Superpowers

This is the broadest category: everything from flying to firing beams from your eyes, metamorphosis, and even manipulating emotions. **Superpowers** are innate abilities or the result of a mutation; they are intrinsic to a being.

Technology

These are gadgets, technological armor, special weapons, and much more. Technology sufficiently advanced... well, you know the rest: anything tech and electronic, human or alien.

MARTIAL TRAINING

Martial Training is divided into **3 categories**: **Martial Master** [unarmed combat], **Swordsman** [melee weapons], and **Marksman** [ranged weapons].

Techniques: These powers work differently from the others. At **Grade 1**, the Hero learns **2 techniques** from that Grade's list. With each new Grade acquired, they may choose **one more technique** from any Grade equal to or lower than their current one. Techniques may be **Active** [requiring Action and/or Resolve] or **Passive** [permanent bonuses]. Each technique also has its own Resolve cost indicated in its Grade.

Acquiring Techniques

To acquire techniques, a character must have the proper Grade in that Power: at **Grade 1**, they gain access to **two techniques**, and only **one of those two** may have the descriptor **Passive**. After that, each Grade grants **1 new Technique** of a Grade equal to or lower than the one possessed.

SWORDSMAN

6 PAX / Grade

Whether with a sword, a trident, or a staff, you are a master in the use of melee weapons. To you, a weapon is an extension of your body and your will.

Grade 1

Activation Cost: 1 Resolve

When acquired, choose **2 techniques** (only **1** may be Passive).

Singular Weapon

(Passive)

When fighting with a single type of melee weapon (swords, for example), you add your **Swordsman Grade** to your **Attack Tests** and to your **Defense**.

Two-Weapon Fighting

(Passive)

When fighting with a melee weapon in each hand, your Multiple-attack penalty becomes **-4 instead of -5**.

Sudden Charge

(1 Action)

You move one distance and attack in the same breath. The attack adds **half your Agility bonus** to the **Attack Test**.

Violent Attack

(1 Action)

You sacrifice precision for power. Make a weapon attack, adding **double your Swordsman Grade** as a direct bonus to damage, but with **Disadvantage** on the **Attack Test**.

Defensive Stance

(1 Action)

You focus on your defense. Your **Block** action gains an additional bonus equal to your **Swordsman Grade**.

Precise Attack

[1 Action]

Make a weapon attack, adding your **Damage Die** as a bonus to your **Attack Test**.

Grade 2

[Activation Cost: 2 Resolve]

When acquired, choose **1 new technique** of **Grade 2 or lower**.

Quick Draw

[Passive]

You gain a bonus to your **Initiative Tests** equal to your **Swordsman Grade**. Your first attack in each Scene gains **Advantage**.

Parry Blow

[Reaction]

When you are the target of a melee attack, you may spend your reaction to make an **Opposed Test** and pit your own **Attack** against the enemy's. If you win the Test, the enemy's attack is negated.

Arc Attack

[1 Action]

You make one attack that hits up to **3 adjacent enemies**, each taking **half your normal Damage**.

Tempest of Blows

[2 Actions]

You deliver **three attacks** in rapid succession. The Multiple-attack penalty is **-2** for each of those attacks.

MARTIAL MASTER

6 PAX / Grade

You have turned your body into a living weapon. The Martial Master focuses on the use of bare hands to injure, immobilize, and stun the opponent.

Grade 1

Activation Cost: 1 Resolve

Acrobatic Fighter

[Passive]

You add your **Martial Master Grade** to your **Defense**.

Martial Artist

[Passive]

You add your **Martial Master Grade** to your **Spirit** and to your **Unarmed Attack Tests**.

Brawler

[Passive]

You add your **Martial Master Grade** to your **Potency** and to the **Damage** of your **Unarmed Attacks**.

Jab-Cross

[Passive]

Your **Multiple Attack** penalty becomes **-4 instead of -5**.

High Guard

[1 Action]

You focus on your defense. Your **Block** action gains an additional bonus equal to your **Martial Master Grade**.

Precise Strike

[1 Action]

You aim for an opening. Make an **Unarmed Attack**, adding your **Damage Die** as a bonus to your **Attack Test**.

Grade 2

Activation Cost: 2 Resolve

When acquired, choose **1 new technique** of **Grade 2 or lower**.

Body Fortification

[Passive]

You add your **Martial Master Grade** to your **Damage Reduction** and to your total **Resolve**.

Fists of Steel

[1 Action]

Your blows become as powerful as steel. Until the end of your turn, your **Unarmed Attacks** deal additional **Damage** equal to your **Martial Master Grade +1**.

Acrobatic Kicks

[1 Action]

With a single **Action**, you move one distance and execute a series of kicks against a group of enemies. This attack gains a bonus to the **Attack Test** and to **Damage** equal to the number

of enemies surrounding you at the end of the movement. If the enemy has the **Group** descriptor, you gain **Advantage** on the **Attack Test**.

Swift Sweep

[1 Action]

You perform a precise sweep that causes no damage against up to **3 adjacent enemies**. The **Attack Test** is made with **-2**, but all who are hit must make an **Opposed Agility Test** against your **Potency** or gain the **"Prone"** Status.

MARKSMAN

6 PAX / Grade

Whether with bows, firearms or energy projectiles, you are a master of ranged combat. Every shot is calculated for maximum effect.

Grade 1

Activation Cost: 1 Resolve

When acquired, choose 2 techniques (only 1 may be Passive).

Favorite Weapon

[Passive]

Choose one type of ranged weapon (for example, Bows). When using it, you receive a bonus to your **Attack Test** and to **Damage** equal to your Marksman Grade.

Special Ammunition

[Free Action]

At the beginning of your turn, you may declare that you are using special ammunition, and you have an amount of this ammunition equal to your Marksman Grade. Choose one of the following effects for your next attack:

Impact Shot: If it hits, the enemy is pushed 1 Distance.

Pinning Shot: If it hits, the enemy gains the "Slowed" Status for 1 Round.

Ricochet Shot

[1 Action]

Make an attack against one target. If it hits, you may cause the projectile to ricochet and strike a second target within a **Close** distance of the first, who suffers **half Damage**.

Grade 2

Activation Cost: 2 Resolve

When acquired, choose **1 new technique** of **Grade 2 or lower**.

Instinctive Shooter

[Passive]

You may make ranged attacks against **Adjacent** targets without suffering **Disadvantage**.

Special Ammunition (Improved)

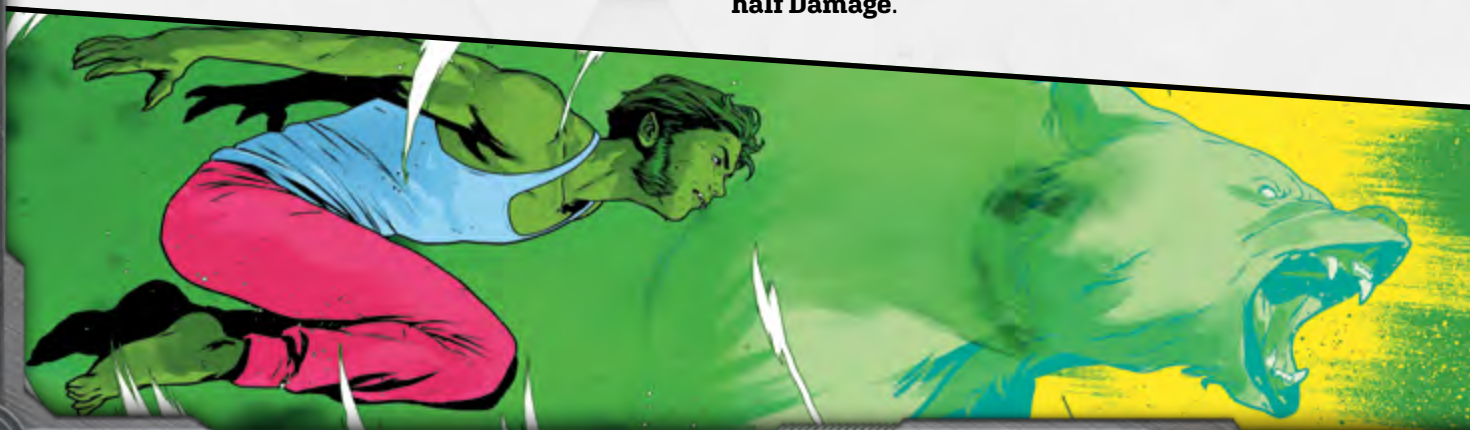

You add new options to your **Special Ammunition** ability:

- **Smoke Shot:** The attack creates a small cloud of smoke at the point of impact, granting cover to the area and causing the **"Blinded"** Status to all who are **Adjacent** to the point of impact until the beginning of your next Turn or until they move away from the point of impact.
- **Boxing Glove Shot:** You are able to fire boxing glove-shaped projectiles. The target must make an **Opposed Resistance Test** against your **Accuracy**. If they fail, the target suffers the **"Stunned"** Status until the end of the target's next Turn.

Barrage of Shots

[2 Actions]

You fire rapidly into an area. Choose one point. You make an attack against up to **3 targets** within a **Close** distance of that point, each suffering **half Damage**.

SUPERPOWERS

Whether firing beams from your eyes, controlling the elements, changing your appearance at will, or teleporting: all of these fit within the **Superpowers** category. As the broadest category, these are usually what we think of when imagining the concept of superheroes. This subgroup refers to the natural characteristics of a Hero. They are the result of genetic mutations or inheritance.

ANIMAL MIMICRY

3 PAX / Grade

You can channel the Red, the force that connects all animal life, to manifest the traits of beasts such as claws, wings, hide, and hooves. When using this power, you may manifest a number of **Animal Adaptations** equal to your Grade, spending 1 Resolve per activated Adaptation. These adaptations last for the Scene.

Grade 1

Beast Claws

[Adaptation]

You manifest natural weapons. Your Damage Die increases by one step when using unarmed attacks.

Reinforced Hide

[Adaptation]

Your skin becomes as thick as a rhinoceros' hide. You gain a Defense bonus equal to your Grade in this power, +1.

Bear Strength

[Adaptation]

You channel the strength of a great animal. You gain a bonus to your Potency Tests equal to your Grade+2.

Feline Agility

[Adaptation]

You move with the grace of a predator. You gain Advantage on your Agility Tests.

Grade 2

Eagle Wings

[Adaptation]

You manifest wings, gaining Flight at a Grade equal to your Grade in this power (up to a maximum of 4).

Hunter Senses

[Adaptation]

Your senses sharpen. You may manifest a wolf's sense of smell or the keen sight of an eagle, gaining Advantage on tests involving smell or sight.

ELASTICITY

5 PAX / Grade

Your body has no fixed form and is completely malleable. A powerful blow would smash your head? You flatten yourself on the spot. Is the remote control too far away to reach? You stretch your arms to grab it. The sky (or your imagination, if we are being honest) is the limit.

Grade 1

Malleable Body

[Passive]

You can flatten yourself to pass under doors and through cracks, and absorb damage. You gain Damage Reduction equal to your Grade in this power +1 against Physical damage.

Extended Reach

Activation: 1 Action

Cost: 1 Resolve

You are able to stretch your limbs. When doing so, you may use them to extend your reach up to Close range. You spend 1 additional Resolve point for each Round you keep Extended Reach active.

Parachute Form

Activation: 1 Action

Cost: Resolve

You can transform into a wide, flattened shape, like a parachute or glider. You can carry a number of allies equal to your Grade in this power, +2 and safely glide from any height.

Grade 2

Bounce Back

Activation: Reaction

Cost: 2 Resolve

When hit by an Attack, you may assume a ball-like form, absorbing part of the impact. When doing so, you are knocked back 1 distance and take half the Damage dealt.

Elastic Prison

Activation: 2 Actions

Cost: 2 Determination

You wrap an adjacent target. The target gains the “Immobilized” status and must succeed on an Opposed Potency Test against your Resistance to escape. You gain a bonus equal to your Grade in this power on the Test.

ELEMENTAL MANIPULATION

5 PAX / Grade

You are able to create, manipulate, amplify and diminish an element. Choose one element among **Fire, Ice, Water, Air, Earth, Electricity**, and **Toxic**. Each type of element must be purchased separately, and whenever you use your element for Tests, such as creating an ice ramp to save civilians or manipulating fire to reduce a blaze, you gain **+2 per Grade** in this power on your Tests.

When choosing this Power, decide when adding it to your sheet whether the Damage it causes is based on **Potency** or **Spirit**.

Grade 1

Elemental Ray

Activation: 1 Action

Cost: 1 Resolve

You make a **Ranged Attack** with **Close** range using your element. This Attack gains a bonus to hit and Damage equal to your **Grade** in this Power. When you achieve a Splash Page, the target gains the Status appropriate to your element:

Fire: Burned

Ice: Frozen

Earth: Immobilized

Electricity: Stunned

Toxic: Poisoned

Elemental Shield

Activation: 1 Action

Cost: 1 Resolve

You use your element to create a protective barrier, creating a shield that protects you and a number of allies equal to your **Grade** in this power, providing a bonus to Defense equal to your **Grade in this Power +1**. The **Elemental Shield** is immobile. Solid elements such as **Earth** and **Ice** provide **2 + your Grade** in Defense. When an Attack hits you, the shield is dismissed.

Grade 2

Elemental Propulsion

Activation: 1 Action

Cost: 2 Resolve

You use your element to propel yourself. Until the end of your next Turn, you may move **2 Distances instead of 1** with movement actions.

Elementalize

Activation: 1 Action

Cost: 2 Resolve

You spend **2 Resolve** to force the target to make an **Opposed Resistance Test** against your **Spirit**. If the target fails, it suffers the Status related to your element until the beginning of your next Turn.

Fire: Engulfed

Water: Slowed

Earth: Prone

Air: Slowed

Ice: Immobilized

Electricity: Stunned

Toxic: Engulfed

ENERGY BLAST

4 PAX / Grade

This power encompasses different forms of energy projection, such as firing lasers from the eyes, energy blasts from the hands, or even charged breath from the mouth. When you gain this power, decide whether the Damage is based on **Potency** or **Spirit**.

A Hero with this power may choose to make a simple ranged attack using their **Damage Die** without spending **Resolve** and without receiving any extra benefits from **Energy Blast**.

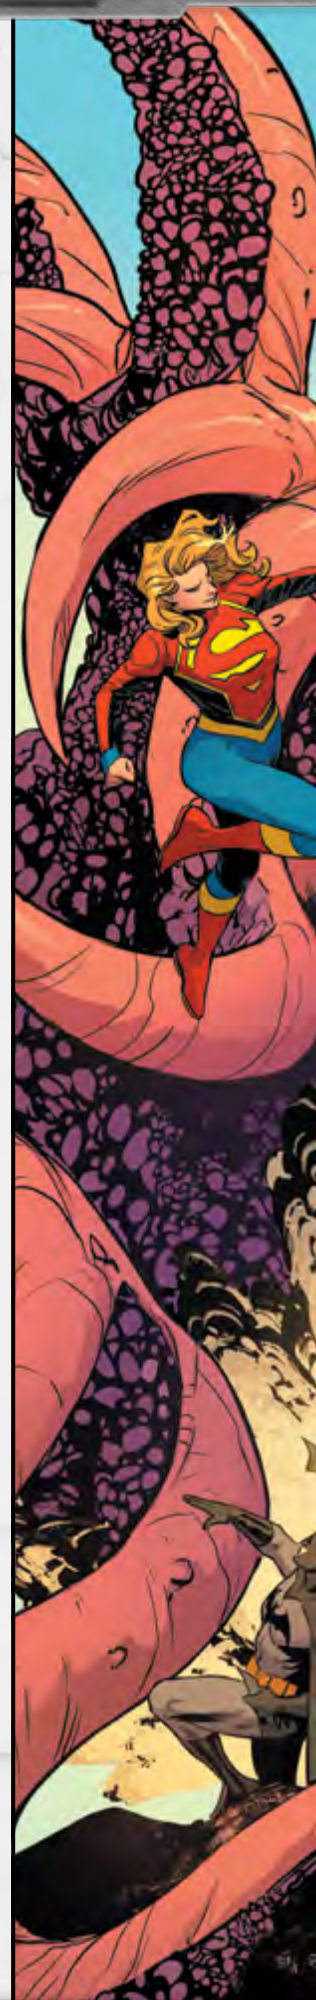

Grade 1

Energy Shot

Activation: 1 Action

Cost: 1 Resolve

You fire energy as a **Ranged Attack**. You attempt to hit an **Adjacent** or **Close** enemy with an energy blast. The **Attack** and **Damage** gain a bonus of **1 + your Grade in Energy Blast**.

Grade 2

Brutal Blast

Activation: 1

Action

Cost: 2 Resolve

When you hit a target with your **Energy Blast**, the target must make an **Opposed Resistance Test** against your **Potency** or **Spirit**. If they fail, the target is pushed **1 Distance**.

ENHANCED RESISTANCE

3 PAX per Grade

You possess a body more durable than normal, whether through hardened skin, metal plates, natural scales, cybernetic armor or superhuman constitution.

Grade 1

Robust Body

Passive

Your **Resistance** increases by **+2**, and your **Damage Reduction** increases by **+1 per Grade** you possess in **Enhanced Resistance**.

Brace for Impact

Activation: 2 Actions

Cost: 1 Resolve

You prepare yourself for an imminent impact. Until the beginning of your next turn, you may add your **Enhanced Resistance Grade** to your **Damage Reduction** against the next attack you receive.

Grade 2

Superhuman Vigor

Passive

Your body becomes a self-sufficient and durable system. You become immune to all poisons and diseases of non-magical

origin. In addition, you can hold your breath for several hours and gain resistance to environments of extreme heat and cold.

FLIGHT

3 PAX / Grade

You are capable of taking to the skies, reaching incredible speeds.

Grade 1

Basic Flight

Activation: 1 Action

Cost: 1 Resolve

You take flight and may move through the air. While in the air, you gain a bonus equal to your **Grade in this power** on your **Agility Tests**. For each Round after the first in which you remain airborne, you must spend **1 Resolve**.

Superhero Landing

Passive

When you enter a combat Scene by landing from a flight, you gain a bonus to your **Initiative roll** equal to your **Grade in Flight**.

Grade 2

Aerial Ride

Passive

You are strong enough to carry one ally with you while flying, with no penalty to speed.

Cruising Speed

Passive

If you possess the **Superhuman Speed** power, your flight speed becomes as fast as your running speed. You may use the **"Dash"** movement ability from **Superhuman Speed**.

FORCE FIELD

3 PAX / Grade

You become capable of generating powerful force fields. They can be used to block attacks, as platforms, and even to imprison enemies.

Grade 1

Field Generation

Activation: 1 Action (or Reaction)

Cost: 1 Resolve

You generate a **Force Field** targeting yourself. It provides **+2 Defense** and **Damage Reduction 1**. The Force Field lasts for **1 Round**. This ability may be used as a **Reaction**, as long as you are able to use it in that manner. Alternatively, you may generate the field on a target **Adjacent** to you.

I Won't Hold Much Longer!

Activation: Reaction

Cost: 1 Resolve

When you dramatically declare that your force field will not hold much longer, it gains a bonus equal to **twice your Grade in this Power** to **Defense** and **Damage Reduction**. The Force Field is dismissed at the end of this **Turn**.

Saving Field

Activation: 1 Action

Cost: 1 Resolve

When you use your **Force Fields** in **Heroic Actions** during **Rescue Scenes**, you may protect a small group of civilians, gaining a **+2 bonus per Grade** on Actions involving your field.

Grade 2

Expanded Protection

Activation: 1 Action

Cost: 2 Resolve

Your **Field Generation** increases to **+3 Defense** and **Damage Reduction 2**, and may also affect **1 target** within **Close** distance of you.

Platform

Activation: 1 Action

Cost: 2 Resolve

Your force fields may be used as static platforms for movement and tactical positioning. You create a platform at any point you can see within a **Close** distance. It can support a number of targets equal to your **Spirit** value (minimum 1) and lasts for **1 Round**.

SPEED FORCE

12 PAX per Grade

The **Speed Force** is one of the seven fundamental forces of the universe. It is the manifestation of movement and speed. Those touched by it are not mere speedsters, but true avatars of velocity: it allows incredible feats beyond simply running at absurd speeds, such as temporal manipulation, molecular vibration and even extremely accelerated thought.

Grade 1

Kinetic Connection

Activation: Passive

Your connection to the **Speed Force** grants you a **+3 bonus to Agility per Grade** you possess in this power.

Kinetic Impact

Activation: Passive

Speed is your weapon. When you spend a **Movement Action** before making a **Melee Attack**, you may use your **Agility modifier** instead of **Potency** to deal Damage.

Accelerated Mind

Activation: 1 Action

Cost: 1 Resolve

You can process information at super speed. If you have access to a data source (a book, a computer, a crime scene), you can absorb all details in a fraction of a second, gaining **Advantage** on your next **Mind Test** to analyze or learn about that subject.

Accelerated Movement

Activation: 1 Action

Cost: 1 Resolve

You may move **two Distances** with a single **Movement Action**.

Grade 2

Barrage of Blows

Activation: 1 Action

Cost: 2 Resolve

You unleash a series of punches faster than the eye can see. With a single **Attack roll**, you strike the opponent multiple times, dealing **+1 Damage Die** against them.

Instant Punch

Activation: 1 Action

Cost: 2 Resolve

You make a **Melee Attack** against any target up to a **Far** distance away from you.

Scarlet Tornado

Activation: 1 Action

Cost: 2 Resolve

You spin your arms or run in circles at high speed, creating a vortex of air. Make an **Attack roll** against all targets within a **Close** distance. You deal Damage equal to **half your Agility value (rounded up)** to the targets. Alternatively, you may choose to pull or push the targets **1 Distance**.

Accelerated Burst

Activation: Free

Cost: 2 Resolve

You force yourself to go even faster, gaining **+1 Movement Action** that Turn or **+1 Dodge**. At the end of the Scene, mark **one Condition**.

SUPER STRENGTH

3 PAX per Grade

This is a classic power that allows herculean feats of strength such as lifting heavy vehicles, removing massive debris, breaking walls with a single punch, and much more. **Super Strength** is more than a simple increase to **Potency**; it allows its wielder to perform some extraordinary physical feats.

Grade 1

Brute Strength

Passive

Your **Potency** increases by **+2 per Grade** in **Super Strength**.

Powerful Strike

Activation: 1 Action

Cost: 1 Resolve

When you make a **Melee Attack**, you may activate **Powerful Strike**. If it hits, you roll **one additional Damage Die**.

Using the Speed Force

Although there are other powers related to speed, the **Speed Force** still reigns supreme. In narrative terms, a Hero (or Villain) with this power is capable of unique feats. Sweeping through an entire city in seconds, reaching the other side of the planet and returning in the same instant, the list is virtually endless.

For reasons of rules, balance, and game design in general, we could not allow a literal transcription of the Force: it would be impossible. As Narrator, adopt the principle that, following the **Grade chart** at the beginning of this chapter, if a user of this power thinks of a feat of speed, they can do it, as long as they succeed on a simple Test.

*A character may not possess both **Speed Force** and **Superhuman Speed** under any circumstances.*

Grade 2

Saving Strength

Activation: 1 Action

Cost: 2 Resolve

When in **Rescue Scenes** and using your **Super Strength** in **Heroic Actions**, you gain **Advantage** on your Tests.

SUPERHUMAN SPEED

3 PAX / Grade

You are fast. Very fast. Although not as fast as someone touched by the **Speed Force**, your speed still allows you to perform incredible feats of agility and momentum. A character may not possess both **Superhuman Speed** and **Speed Force**.

Grade 1

Natural Runner

Passive

Your **Agility** increases by **+2 per Grade** you possess in **Superhuman Speed**.

Dash

Activation: 1 Action

Cost: 1 Resolve

While in contact with the ground, you may concentrate your speed into a single burst, moving faster than the eye can follow. You may move up to **two Distances instead of one**.

Grade 2

Quick Reflexes

Passive

Your reflexes are enhanced, allowing you to react to danger before most people even realize it exists. You add your **Grade in Superhuman Speed** to your **Initiative** rolls.

Teleportation

5 PAX / Grade

You can bend space or pierce dimensions to travel from point A to point B instantaneously, ignoring any physical barriers between them.

Grade 1

Spatial Sense

Activation: Passive

Your brain processes space at hyper-accelerated speed so you don't appear inside a wall.

You receive a bonus equal to your Grade in this Power on Agility checks that involve moving and jumping. Additionally, you receive a Bonus on your Defense equal to your Grade in this Power, +1.

Tactical Jump

Activation: 1 Action

Cost: 1 Resolve

You "blink" in space, teleporting yourself to any point you can see within Near range. On Rescue Scenes, you ignore any difficult terrain, chasms, or high walls, you don't need to roll to reach victims in precarious locations (like the top of a burning building or a cliff), you simply appear there.

Space Warp

Activation: 1 Action

Cost: 1 Resolve

You use teleport to instantly flank and teleport to a space Adjacent to an enemy, performing a Melee Attack in the same movement with Advantage.

Grade 2

Quick Extraction

Activation: 1 Action

Cost: 2 Resolve

You touch an ally, civilian, or object (up to the size of a motorcycle) and leap through space with it to any Distant point. If you attempt to teleport an enemy, make an Opposed Agility Test against the Potency or Agility of the target whichever is higher.

Evasive Teleport

Activation: Reactio

Cost: 2 Resolve

When you are targeted by an attack (melee or ranged), you can disappear one millisecond before impact and add your Teleportation Grade to your Block or Dodge against that Attack. If the attack misses, you reappear at any point within Near range.

TECHNOLOGY

Technology sufficiently advanced is as impactful as any superpower. In the universe of **JLU RPG**, it can equal or surpass superhuman abilities. Imagine a technological armor capable of rivalling Kryptonian strength, running on the most sophisticated quantum computers, and bearing weapons with as much firepower as any optical blast.

Technologies are powerful pieces of equipment that provide many different capabilities to their users: in a connected world, someone with access to the right devices can influence global events, neutralize gigantic threats and simulate powers possessed only by the most extraordinary beings. From the **Dark Knight** who uses **Technological Spheres** to investigate a crime scene to the **Genius** who uses an **Exoskeleton** to fly at rocket speed, technology is a powerful front.

EXOSKELETON

8 PAX / Grade

This armor (yes, mechanically the **Exoskeleton** counts as armor*) enhances the abilities of whoever wears it, transforming an ordinary person into a one-man army. When you acquire this power, you build your **Exoskeleton** by choosing **two Improvements** from the list below. With each new Grade, you may add **one more Improvement**.

The use of these abilities is covered by the normal Action cost, unless otherwise specified. The activation cost is **1 Resolve for Grade 1; 2 for Grade 2; 4 for Grade 3; 6 for Grade 4; and 8 for Grade 5**.

If your **Resolve** reaches **0**, your armor enters emergency mode, disabling all of its **Improvements** until it is recharged.

Strength Systems

[Passive]

Powerful servomotors increase your strength. At **Grade 1**, your **Potency** becomes **10**. For each subsequent Grade, gain **+3 Potency**.

Integrated Weaponry

[Passive]

Your suit has an integrated weapons system. You gain the benefits of the **Energy Blast** power at a Grade equal to your **Exoskeleton Grade**. Using **Energy Blast** costs **1 Action** and the **Resolve cost** corresponding to the Grade used.

Flight Thrusters

[Passive]

Your armor has a flight system. You gain the **Flight** power at a Grade equal to your **Exoskeleton Grade**.

Force Field Generator

[Passive]

The suit can project an energy barrier. You gain the **Force Field** power at a Grade equal to your **Exoskeleton Grade**. Using **Force Field** costs **1 Action** and the **Resolve cost** corresponding to the Grade used.

Composite Armor

[Passive]

The armor is made from an ultra-resistant alloy. You gain a permanent **+1 Defense per Grade in Exoskeleton** and **Damage Reduction 2**.

Sensor Package

[Passive]

A set of advanced sensors is integrated into your helmet. You gain the **Special Senses** power (of your choice) at a Grade equal to your **Exoskeleton Grade**. Using **Special Senses** costs **1 Action** and the **Resolve cost** corresponding to the Grade used.

Sealed Suit

[Passive]

The armor is sealed, allowing you to operate in any environment. You can breathe in a vacuum or underwater, and become immune to damage from extreme heat/cold and to the **Burned** and **Frozen** Statuses.

Onboard Computer

[Passive]

The suit possesses a tactical A.I. While wearing the armor, you gain the **Tech Knowledge**.

Technological Spheres

4 PAX / Grade

You are accompanied by a set of high-tech spherical drones that respond to your commands, acting as your eyes, shields, weapons, and loyal companions. The spheres possess **Functions**. And you can have a number of active **Functions** equal to your Grade in that Power. Each one has an Activation and a Cost, as well as a duration, specified in its description. Identical Functions do not stack. If your Resolve reaches zero, the Spheres are deactivated.

Defense Mode

Activation: Free

Cost: 2 Resolve

The spheres orbit around you at high speed, intercepting attacks. By the end of the Scene, you receive a bonus to your Defense equal to your Grade in this Power.

Attack Mode

Activation: 1 Action

Cost: 2 Resolve

The spheres position themselves for combat, opening their energy emitters. By the end of the Scene, you gain access to the power. Energy Blast with a Grade equal to your Grade in this Power.

Propulsion Mode**Activation:** 1 Action**Cost:** 2 Resolve

The spheres attach themselves to you, functioning as a propulsion system. You receive the power. Flight (Grade 1) until the end of the Scene.

Electromagnetic Pulse**Activation:** 1 Action**Cost:** 3 Resolve

The spheres release a pulse that disables nearby technology. Robotic enemies or those with armor that generate technological effects, such as the Exoskeleton, must make a Test of Resistance (Tension 16) or lose access to their technological abilities for 1 Round.

Tactical Analysis**Activation:** 1 Action**Cost:** 1 Resolve

You control the spheres to scan the area. Until the end of the Scene, you receive Advantage on your next Test of Mind to search for clues, hidden enemies, or technological anomalies in the Zone.

KNOWLEDGE

A Hero without Knowledge on a particular subject is **UNABLE** to make any Test on that subject. Without the **Piloting Knowledge**, your Hero may be able to drive a car, but will not be able to perform maneuvers or chases, for example, because those would involve **Tests**.

Acquiring Knowledge

Each Knowledge costs **4 PAX**, and grants all the abilities listed in that field. Possessing a Knowledge is enough for a Hero to be a considerable force in that area, a true expert.

Acrobatics

You practically fly through the city. Leaping over buildings, climbing walls, and performing incredibly agile maneuvers are part of your everyday life.

Climbing: When climbing any surface, leaping over buildings, or moving acrobatically, you gain Advantage on your Test.

Acrobatic Jump: Once per **Issue**, you gain an **automatic success** when performing an unbelievable feat of jumping or aerial movement.

Free Running: When you need to cross an area

with obstacles (rooftops, walls, gaps), reduce the **Tension by 5** to reach your destination quickly.

Subterfuge

Going unnoticed, opening locks, and avoiding direct confrontation. **Subterfuge** is the art of not being seen and always having an ace up your sleeve.

Slip By: When making **Agility Tests** to sneak around, you gain **Advantage**.

Escapist: No bond can hold you. Once per **Issue**, if you are imprisoned or handcuffed, you may escape automatically.

Unaware Strike: Once per Scene, when dealing damage to a target that is unaware of your presence, you roll **1 additional Tier Damage Die**.

Tech

You are an expert in electronics, programming and advanced devices. You know how to hack, repair, and create last-minute gadgets.

Hacker: If you have the appropriate tools, you may break into sophisticated systems. You gain **Advantage** on Tests involving hacking systems and breaking codes.

Tech Rat: When you spend a **Scene** observing and studying a technological item, you completely understand how it works.

Technological Gadget: You carry a special gadget. At the beginning of the **Issue**, choose one **Gear** item from the list to receive. It must be used by the end of the **Issue**.

Strategy

You are a master of tactics and planning. You can foresee movements, elaborate maneuvers and wild plans like no one else.

Plan B: You always have a backup plan. Once per **Issue**, when you fail a Test, you may describe how you had a plan up your sleeve and reroll the Test, keeping the second result.

Maneuver Number 7!: You prepared for this moment. At the beginning of a **Scene**, choose one Attribute on a single target character. They receive a bonus equal to your **Tier** on their next roll with that Attribute.

Tactical Analysis: Once per **Issue**, you may quickly analyze your target. You must choose one of the following factors about the target to

discover: a **Weakness**, their **Resolve Points**, one **Attribute** of your choice, or the first action they will take on their turn.

EQUIPMENT

Weapons

In JLU RPG, there is no long and detailed list of every existing weapon; here we use a simpler and more straightforward approach, dividing them into two categories: **Martial Weapons** and **Ranged Weapons**. Each of these categories includes a different set of armaments. Whenever a Hero acquires a weapon, it should be noted on their character sheet, and the player might even want to give the weapon a unique name. Otherwise, something like “my trident” or “my boomerang” would suffice.”

Martial Weapons

1 PAX each

These are weapons effective in melee combat, such as swords, staffs, and tridents, used as a true extension of their wielder. Those who know how to use martial weapons with mastery treat them as another part of their body. While using a martial weapon, you gain **+1 Damage**. This bonus is not cumulative with other weapons.

Ranged Weapons

1 PAX each

Ranged weapons include any weapon capable of firing projectiles, such as bows and arrows, boomerangs, or energy weapons. Each Ranged Weapon grants a **+1 bonus to Attack**. This bonus is not cumulative with other weapons.

Range: All Ranged Weapons have **Range**, which indicates how far an Attack with them can reach. All ranged weapons have a **Close** range, and any Attack made at another distance suffers **Disadvantage**. A weapon's range may be increased to **Far** for **5 PAX**.

Special Material

The universe is permeated by many different materials, each with unique and impactful properties: a mace made of **Nth Metal** can grant flight, while a sword made of **Kryptonite** can be an extremely dangerous weapon against Kryptonians. In martial weapons, these materials appear as part of the weapon's composition; in ranged weapons, they appear as ammunition.

Ammunition: Ammunition is essential for users of ranged weapons: imagine Green Arrow walking around without a good bundle of arrows! Even so, in Justice League Unlimited RPG, we do not require a Hero to keep track of how many shots they still have left, but in the case of **Special Material**, things work a little differently. For that, we adopt the **Ammunition Die**. It is equal to your **Tier Damage Die**, and at the end of a Scene in which you used the special material, you roll that die. If the result is **1 or less**, your ammunition has run out and you need to get more!

Kryptonite

Cost: 5 PAX

Your weapon contains fragments of the mineral that is anathema to Kryptonians.

Nth Metal

Cost: 3 PAX

This metal native to the planet Thanagar has properties capable of negating gravity. A weapon made from this material grants **Flight Grade 1** to its wielder.

Promethium

Cost: 7 PAX

This metallic alloy is the strongest material on planet Earth. **Promethium** weapons ignore an amount of a target's **Damage Reduction** equal to the wielder's **Tier**.

GEAR

1 PAX each

These are useful gadgets with a variety of uses. They range from communicators and smoke bombs all the way to grappling guns. Gear has 3 uses, which recharge at the beginning of each Issue, and using them requires 1 Action.

Smoke Bombs: Spend 1 Use; for **1 Round**, all targets within a **Close** Zone of where you threw the bomb suffer **-3** on rolls that require sight.

Grappling Gun: When you spend one of its uses, you may move **1 Distance** in any direction.

Pull and Strike: You may spend 1 use to make a **Ranged Attack** against a target at **Close** or **Far** distance from you. If it hits, you move the target **1 Distance** toward you. If the target ends up Adjacent to you, you deal **Damage**.

Healing Spray: Spend 1 use to remove the **Scratched** or **Tired** Conditions from an **Adjacent** target.

Tracker: Spend 1 use to place the Tracker on a person or object. It emits a GPS signal that precisely indicates the target's location.

Rebreather: Spend 1 use; until the end of the Scene, you are able to breathe normally in aquatic environments.

Alteration Mask: Spend 1 use; until the end of the Scene, you are able to alter your face.

E.M.P. (Electromagnetic Pulse): Spend 1 use; all non-military electronic devices within a **Close** distance are disabled for one Scene. Robotic enemies or those wearing technological armor (such as an **Exoskeleton**) must make a **Resistance Test** against **Tension 16** or lose access to all of their technological abilities for **1 Round**.

Adhesive Bomb: Spend 1 use and choose a target up to **Close** distance away. The target must succeed on an **Agility Test** against **Tension 15** or gain the "**Immobilized**" Status.

Personal Hologram: Spend 1 use to activate the hologram, which appears in a location at **Close** distance. Until the beginning of your next turn, any enemy who tries to attack you must first pass a **Mind Test** against **Tension 14**. On a failure, they attack the hologram and lose the Action.

Cryptographic Sequencer: Spend 1 use before making a test to hack a system, disable an electronic lock, or decipher a coded message. You gain **Advantage** on that test.

Sleep Gas: Spend 1 use. All targets within **Close** distance (excluding you) must succeed on a **Resistance Test** against **Tension 14** or gain the "**Asleep**" Status for **1 Round** or until they suffer damage.

TRAITS

Think of Traits as the answers to important questions about your character that are not covered by Powers or Knowledge:

- **What do you have?** (Resources, a secret base, a special vehicle)
- **Who do you know?** (Contacts, allies, affiliation with an organization)
- **Who are you?** (A reputation, striking beauty, a well-kept secret identity)
- **What can you do exceptionally well?** (An innate talent beyond normal training)

In this quickstart, we provide **Simple Traits**, which cost **4 PAX each**.

Striking Appearance

Your appearance is extraordinary, almost hypnotic. Once per Scene, when making a social test based on persuasion or seduction, you may spend **2 Resolve** and automatically succeed.

Polyglot

You read, write, and speak all common human languages. In addition, your ease is so great that you may learn new languages simply by observing them for at least **one Scene**.

Reliable Contact

You have a guaranteed source of information (reporter, scientist, hacker, etc.). Once per **Issue**, you can ask the Editor to provide you with a useful clue from your Reliable Contact with relation to an investigation or mystery.

Tough as Nails

You are hard to bring down. Gain **Damage Reduction 2**, and when you mark the **Defeated** Condition, you may still act for **one more Turn** before falling.

Catchphrase

Define a **Catchphrase** together with the Editor. Once per Scene, when you shout it loud and clear, choose one of the benefits below:

- Reduce the **Resolve cost** of an ability by a value equal to your **Tier**.
- Gain **Advantage** on your next roll.

Packet Gadgets

You always have the right item ready for every situation. Once per Scene, you may spend **1 Resolve** to receive one **Gear** item from the list.

Voice of the Crowd

In times of crisis, your voice stands out. When you choose this Trait, you receive **Advantage** on tests involving giving instructions, controlling, and calming crowds in **Rescue Scenes**.

Influencer

You have many followers on social media. Maybe you have a channel where you post your patrols, a page where you review the latest hero products or simply a fan page for your pet.

"Today's sponsor is..." : Once per **Issue**, you may receive a **Freebie**, which is a small item such as a top-of-the-line cellphone, a small weapon or an item of clothing.

Secret Identity

You keep your civilian persona well protected and separate from your heroic life, whether through a mask or hypnotic glasses. No one (or almost no one) knows your identity. You gain **Advantage** on tests involving your civilian life, such as talking about the weather, standing in line, or taking the bus.

Put on the Glasses: Once per **Issue**, when you are engaged in some heroic activity, you may activate your civilian persona to leave the Scene quickly. When you do, you may reappear in an **Adjacent Zone**.

Dynamic Duo

You have forged a powerful and genuine bond with another Hero. This Trait only functions if both Heroes involved possess it, and the **Dynamic Duo** only functions between the two of you. Whenever you are in the same **Scene**, both of you receive **+1 Resolve, Accuracy, and Defense**. In addition, whenever the Hero to whom you are linked suffers any amount of Damage, you receive **1 point of Damage**.

Synchronized Attack: Once per **Issue**, the **Dynamic Duo** may make a powerful joint strike. For this Attack, both make separate **Attack rolls**, keeping the best result. Take each Hero's Attribute that they used for the Attack, add them together, and divide the total by 2. The result (rounded down) is the **Damage Bonus** for the Attack.

Affiliation

You are a member of an organization such as the **Bat-Family** or **Steelworks**. When using the fame of your affiliation in social Tests, you may spend **2 Resolve** to gain **Advantage** on that Test.

Aid from the Group: Once per **Issue**, you may call for aid, such as receiving a technological device from **Steelworks** or access to Gotham's most exclusive clubs through the **Bat-Family**.

LIMITATIONS

Every Hero worth the name has a weakness, after all, no one is completely invincible. Acting both as a mechanical weakness and a narrative hook, a **Limitation** is something that makes our Heroes tangible.

Think of the **Martian Manhunter's** aversion to fire, **Superman's** vulnerability to Kryptonite or **Batman's** moral code. When choosing a Limitation, do not think that you are weakening your Hero: it is a chance to make the story more interesting.

Choosing Limitations

As a rule, every **Archetype** offers one Limitation, such as the **Enraged's Side Effect**. But beyond that, every player (with the exception of some Origins) must choose **one more Limitation** for their Hero.

Whenever your Hero is exposed to that Limitation in a narratively important moment, they will suffer a consequence. The **Editor** is the final arbiter of when a Limitation is activated, but players are encouraged to roleplay their own weaknesses and bring them into the story.

Consequences of Limitations

Limitations manifest mechanically in several ways. As a rule, Limitations take precedence over other abilities or powers in the game: a Martian with **Vulnerability to fire** does not get rid of that Limitation if they acquire the **Invulnerability** Power to that element. Each type of consequence offers a different challenge:

Vulnerability: Applies the **Vulnerable** status when in contact with the target.

Example: A Hero of divine origin may have **Vulnerability** to profane or hell-forged weapons.

Weakness: You receive a negative **Status** when exposed to a certain condition.

Example: A Hero with **Pyrophobia** (fear of fire) may receive the "**Frightened**" Status whenever confronted with a large source of flames, suffering penalties on their actions.

Nullification: Your powers are temporarily turned off.

Example: A technological Hero may have their **Exoskeleton** power **Nullified** by an **EMP**.

Debilitation: You move up one level on your **Condition** track.

Example: A Hero whose physiology depends on darkness may suffer a **Debilitation** when exposed to direct sunlight, immediately marking the "**Tired**" Condition.

Impossibility: You are unable to use certain **Knowledge** or **Traits** in specific situations.

Example: A character with a rigid **Code of Conduct** against lying suffers **Impossibility** when trying to use any social Test to deceive someone.

ROLLING THE DICE

The core mechanic governing moments of uncertainty in **JLU RPG** is the roll of a **twenty-sided die (d20)**. Whenever a Hero tries to perform an action whose result is uncertain, they must make a Test. The formula is simple:

Test Result	=	1d20	+	Relevant Attribute	+	Other Bonuses (Powers, abilities, equipment, etc.)
-------------	---	------	---	--------------------	---	--

This result is then compared to a target number defined by the **Editor**, known as **Tension**. One important note for players: the player never asks for Tests; they always suggest a course of action, and the Editor decides the appropriate Test and Attributes.

Advantage

Certain abilities or favorable situations may grant **Advantage** to a character. When this happens, the player rolls **two dice** (d20 for Tests, or the Damage Die for attacks) and keeps the **better result**. If for some reason a Hero gains more than one Advantage, they do not increase the number of dice rolled, but instead gain a +2 bonus for each Advantage beyond the first. **Advantage** and **Disadvantage** cancel each other out.

Disadvantage

Similar to Advantage, there are some unfavorable situations that complicate a Hero's life. When this happens, they suffer **Disadvantage**. The player rolls **two dice** and keeps the **worse result**.

Increase by One Step

Some abilities allow you to increase your **Tier Die** by one step. When you do this, follow the order below. Increasing the Die beyond **d12** means rolling a **d12 with Advantage**.

d6 → d8 → d12

Actions

Justice League Unlimited is a game built around **Actions**: throughout the game, characters will perform many of them. Flying quickly to save endangered innocents, landing the final shot on the villain who's terrorising the city, calming a riotous crowd, and many other efforts are all examples of Actions. Think of them as a small cause that generates a narrative effect in a game situation.

Actions are widely used in **combat, rescue scenes, social interactions, and environmental challenges...** the list is virtually endless. At all times during the game, Heroes (and villains) will be performing Actions.

TENSION

Tension is the Editor's main tool for defining the difficulty of any situation in the game. It is a numerical value that represents the danger and complexity of a task. The final word on the value of Tension always belongs to the **Editor**, who may adjust it based on various narrative factors.

DIFFICULTY LEVELS

In **Justice League Unlimited RPG**, the division by **Tiers** allows the game to cover a wide variety of challenges appropriate to the many power levels a comic-book story encompasses. While a group of **Year One Heroes** deals with the chaos of the streets during an alien invasion, the **World's Finest** deals directly with the intergalactic conqueror. For this reason, the **Difficulty**

Levels (**Routine, Challenging, Difficult, Heroic, and Impossible**) have values calculated to better suit each Tier.

Routine: A task that a Hero of the corresponding Tier should be able to accomplish with some ease, though failure is still possible.

Tier D Example [Tension 12]: Stop a gang of ordinary thieves from robbing an ATM.

Challenging: The standard for heroic life. It represents a task that requires effort and presents a real risk of complications.

Tier C Example [Tension 17]: Stop falling debris from hitting civilians on a busy street.

Difficult: A task that will likely require planning, teamwork, or intelligent use of powers. Failure here has serious consequences.

Tier C Example [Tension 20]: Put together the clues left by a serial killer like the Riddler.

Tension	Tier D	Tier C
Routine	12	15
Challenging	15	18
Difficult	18	21
Heroic	21	25
Impossible	26+	28+

TESTS

A Test occurs whenever there is an uncertainty in the outcome of an Action, so the dice are rolled against the **Tension** set by the Editor to resolve the uncertainty.

Success!: When a Hero obtains a value equal to or greater than the Tension, they achieve a Success.

Critical Success: Splash Page! You know that incredible comic-book scene drawn by the artist you love, in full double-spread style? Here it works the same way. When a Hero exceeds the Tension by **15 or more** or rolls a **natural 20** on the d20 (that is, the value 20 on the die, without any bonuses), a **Splash Page** occurs. This is an epic moment in which the best possible result happens.

Failure: When a Hero gets a result lower than the Tension, we have a failure. The Editor describes how, just as the speedster was about to catch the Villain, they escape at the last instant and the portal closes.

Critical Failure: Editorial Cut! When a Hero fails by **15 or more** below the Tension, or rolls a natural 1 on the d20, we have a **Critical Failure**. Not only does the Hero fail their Test, but the worst happens. The Editor narrates how this disaster unfolds: perhaps the attempt to hold the truck falling off the bridge did not go as expected and now the Amazon is being dragged down with it, in freefall! How will she get out of this?

Close Call! When the Hero fails to reach the Tension, but chooses to spend **Resolve**, they may spend Resolve points to increase the Test result. The result increases by 1 for each Resolve point spent. **Close Call!** cannot be used on **Editorial Cuts**.

OPPOSED TEST

When two forces enter into direct conflict, such as a race around the globe between two speedsters, an arm-wrestling match between the strongest beings on Earth, or a chess game between a genius and a quantum supercomputer, an **Opposed Test** is made. In an Opposed Test, both sides make a Test using the relevant attribute. Whoever gets the higher result wins the contest. In case of a tie, a new Test must be made. Note that an **Opposed Test** is not made against **Tension**, but rather against another result, and therefore effects that use or depend on Tension cannot be used.

COMBAT

Sometimes heroic work involves getting into a fight, after all, there are enemies who will not be convinced by words alone. Combat in **JLU RPG** is designed to be fast, dynamic and cinematic, but with a touch of tactics. Using the **3 Actions** mechanic, Heroes will devise strategies, apply unusual plans and kick the backsides of many evildoers.

Stages of Combat

Initiative

When a conflict begins, all parties involved compare their Agility score to decide who acts first. The order of turns is determined from the highest to the lowest. In case of a tie, both parts involved must make an Agility Test, and the winner is placed immediately above the loser.

Increasing Initiative: A character can force their limits to increase their place on the Initiative order: By each Resolve point spent, they receive +1 during the Initiative phase.

Inspire

Activation: 1

Some Heroes have a natural aura of command, fulfilling those around them with hope and determination. With this action, a Hero can inspire allies, pushing them beyond their limits. To use this Action, the Spirit of the Hero must be higher than the target's Spirit score. A target can only be affected by one of Inspire's effects at a time.

Once per round, choose one ally that can see or hear you, and make a Spirit Test against the Tension set by the Editor. On a Success, choose one of the following:

You've Got This! The target receives Advantage on their next Heroic Action.

Don't Give Up! A target receives a bonus to their next Attack, Block or Dodge equal to your Spirit value, as long as they are facing a threat with a Tier Higher than theirs.

Heroes Never Quit! You can spend 1 Resolve Point to grant a target 1 Resolve Point, up to a maximum number of Resolve Points per Scene equal to your Spirit score.

Tactics

Activation: 1

With this action, a Hero can shout orders and commands to their allies and civilians, acting like a true oracle and granting them tactical advantages. To use this Action, the Mind Attribute of the Hero must be higher than the target's Mind. A target can only be affected by one Tactics effect at a time.

Once per Round, Choose one ally that can hear you and make a Mind Test against the Tension set by the Editor, on a Success, choose one of the following:

On your left!!: The target's next Dodge receives a bonus equal to your Mind.

Engage!: Before the beginning of a Combat, the Target's Initiative is increased in a value equal to half your Mind.

Attack!: The target next Attack receives a bonus equal to your Mind, limited by your Tier,+3.

Hold the Line!: The Target receives Damage Reduction equal to your half your Mind score against the next Attack that targets them.

Move! Move! Move!: The Target receives one extra Move action that must be used on their next Turn.

Focus!: The Target next Opposed Test to resist a harmful effect, such as a Status effect receives Advantage. Focus can be used as a Reaction.

Brace for Impact!: The target gains a bonus equal to half your Mind score on their next Block.

Turn

A Turn is the moment when a Hero must act. During a turn, the character has **3 Actions**. When all actions have been used or the participant declares the Turn ended, the Turn ends.

Round

When everyone involved in the conflict has resolved their turns, the **Round** ends. Then a new Round begins, following the same Initiative order.

These three steps represent the basic flow of combat, which repeats until the confrontation is over.

Basic Combat Resources

It is necessary to understand some of the resources a character has during combat: how **Resolve** is used, how **Damage** works, and the dynamics of **Attack** and **Defense** are fundamental to the progress of the game.

Resolve

Using this resource activates powers and other abilities, and it is also the first line against Damage. In terms common to other games, think of Resolve simultaneously as your "life" and your "mana," but even so, if it runs out, a character may still keep going. It is the stamina that must be used strategically. When Resolve runs out, a Hero must mark a **Condition**. (See **Conditions** later in this section.)

Attack

These are blows, shots, cuts and everything else. To make an Attack, roll **1d20 + Accuracy** and compare it to the target's **Defense**. If the result is higher, the Attack is successful. See more about Attack under **Combat Actions**.

Defense

Defense is a character's protection and their ability to avoid being hit. Do not think of it only as how tough a Hero's skin or suit is; imagine it as the protective aura formed around them. A street thug would have a harder time keeping themselves from shaking long enough to shoot **Batman** than they would if they were shooting at a rookie vigilante.

Tier	Defense Value
E	12
D	15
C	18

Defense Value: A Hero's Defense is equal to the base value provided by their Tier.

Using Defense

In combat, Defense is used when you are the target of an Attack, serving as the basic value the attacker needs to reach in order to hit you. Some attributes may be added to the **base Defense value**, increasing it against incoming attacks: **Agility**, **Resistance**, **Spirit**, and **Mind** may be used as protection against many different types of effects.

Active Defense

A Hero worth the name should always be ready to react to anything that is thrown, fired, struck or cast in their direction; that is where **Active Defense** comes in. With it, it is possible to add one of your **Attributes** to your **Base Defense**.

Active Defense

Activation: Reaction

When using **Active Defense**, you prepare to receive an Attack. Choose one of the effects below and gain its effects until the end of the next Attack Action that targets you. A character may only have **one Active Defense** at a time. This Defense may be deactivated as a free action.

Dodge: A Dodge is made to get out of the way of an Attack, adding **Agility** to the **Defense value**.

Block: A Block uses **Resistance** to withstand the impact of blows that cause physical damage, adding **Resistance** to Defense.

Damage

Damage represents the harm and destruction a character causes (and suffers) during combat. Whenever an Attack hits, it deals Damage directly to the target's **Resolve**. As a rule, a character's basic Damage is equal to their **Tier Damage Die + the indicated Attribute**.

Types of Damage

The game separates different types of Damage into **four categories**, which interact in different ways with Powers, abilities and other effects during combat: **Physical**, **Energy**, **Magical**, and **Psychic**.

These categories act as umbrellas, encompassing many different kinds of attacks under one label. Even so, one ability or another may not fit entirely into any of them; in that case, the **Editor** has the final word.

Physical: The most common type of Damage, caused by blows, melee weapons and projectiles. This type of Damage is normally associated with **Potency**.

Energy: Energy Damage includes pure energy sources or forces of nature, such as elements, energy blasts, light and shadows. This type of Damage is normally associated with **Potency** or **Spirit**.

Magical: This type of Damage comes from magical sources, such as spells or artifacts. Magical damage uses **Spirit** as its Attribute.

Psychic: Psychic Damage comes from sources that use mental power, such as telekinesis, telepathy, and illusion manipulation. The Attribute associated with this type of Damage is **Mind**.

CONDITIONS

Conditions are hazardous states that can be applied to Heroes over the course of a game. Conditions begin at "**Scratched**" and end at "**Defeated**." Each time a Hero marks a Condition, they get closer and closer to defeat.

Marking Conditions

Generally, Conditions are marked when receiving a significant amount of Damage: perhaps that energy blast broke your spirit, or that cross punch knocked the breath out of you. There are some ways to mark Conditions:

Choosing to Mark Them: When a character receives at least **10 points of Damage**, they may mark a **Condition**, keeping their **Resolve** intact but absorbing the Damage directly. Even so, all excess damage beyond the 10 points negated in favour of marking a condition is still deducted from the Hero's Resolve.

Example: If a Hero receives **13 points of Damage** from a Villain, they may mark one Condition to take only **3 points** to their Resolve. In another situation, that same Hero receives **20 points of Damage**, but this time they choose to mark **two Conditions**, absorbing **10 points of Damage** with each one. Since there is no excess Damage, their Resolve remains intact.

Condition Track

Conditions follow an order and are not marked at random. In ascending order, they are: **Tired**, **Scratched**, **Injured**, **Wounded**, and **Defeated**. A character cannot mark the "**Scratched**" Condition without first having marked "**Tired**," and so on. Some Powers grant extra Conditions, which must be counted before **Scratched**, while preserving the order of the track.

Tired: The fight is dragging on, you begin to pant.

Scratched: It was just a little scratch. There's still plenty of firewood left to burn. Apply -2 to all d20 rolls.

Injured: That one hurt. Not enough to stop you, but it hurt. Apply -4 to all your **d20 rolls**.

Wounded: It is time to start worrying. Characters who are Wounded suffer **Disadvantage** to all their **d20 rolls**.

Defeated: The Hero is out of combat and at the Editor's mercy. Their fate will be decided by the course of the story.

Fighting Without Resolve

When Resolve is depleted, a character becomes **Vulnerable**: if they suffer **1 point or more of Damage**, they must mark one **Condition**. In

addition, for each multiple of ten taken while Vulnerable, mark one additional Condition.

When in doubt, follow the table:

Amount of Damage	Conditions Marked
1-10	1
11-20	2
21-30	3
31-40	4
41+	Defeated

Example: Nightwing is out of Resolve points, which means he becomes **Vulnerable**. The Metal Sentinel he and the Titans are fighting lands a powerful strike, dealing **5 points of damage**. Nightwing marks **one Condition box**. That one hurt!

STATUS

Some abilities may cause a wide variety of effects in a Hero. Unlike Conditions, Heroes do not have a limit on the number of Statuses they can receive, but two identical Statuses do not stack.

Shaken

Makes any **Mind** or **Spirit** test with **Disadvantage**.

Asleep

Cannot perform actions. If they suffer any type of Damage, they wake immediately.

Frightened

Suffers **Disadvantage** on all tests against the source of fear, and cannot willingly move closer to it.

Stunned

Loses **1 Action** on their turn.

Prone

The character must spend **1 Movement Action** to stand or regain their footing before they can use any more Movement Actions.

While **Prone**:

- They cannot move.

- They make all attacks (melee and ranged) with **Disadvantage**.

Blinded

Suffers **Disadvantage** on all actions that depend on sight.

Frozen

Is **Immobilized** and suffers **1 Damage per Round**.

Confused

At the start of the turn, roll **1d6**:

- **1 to 4:** Attacks the nearest ally with all available actions.
- **5 to 6:** Acts normally, but all actions cost **double Resolve**.

Controlled

Is under the control of another character. During their turn, whoever controls them chooses their actions.

Weakened

Disadvantage on **Potency Tests**.

Poisoned

Is **Engulfed** in poison. Suffers the effects of **Engulfed** (see below).

Engulfed

Suffers **2 Damage per Round** due to poison, flames, bleeding, or another ongoing effect.

Exhausted

Cannot recover **Resolve** through rest or abilities.

Suffers **Disadvantage** on all **Potency, Resistance**, and **Mind** tests.

Immobilized

Cannot move. May act normally, as long as movement is not required. May attempt to break free.

Slowed

All **Movement Actions** cost **+1 additional Action**.

Burned

Is **Engulfed** in flames. Suffers the effects of **Engulfed**.

Bleeding

Loses **2 Resolve per Tier** at the start of each turn.

Vulnerable

Has no **Resolve**. Any amount of Damage causes them to mark a **Condition Box**.

MOVEMENT

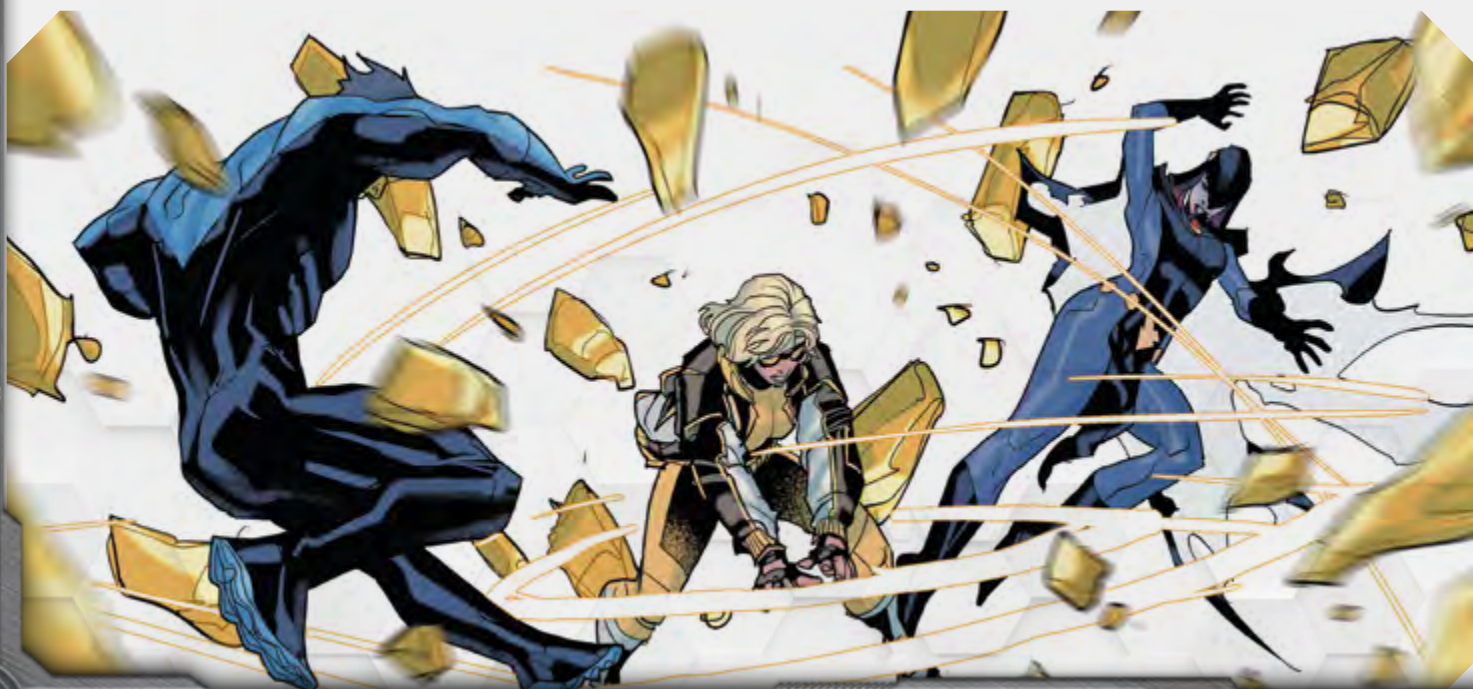

Knowing how to position yourself can be the difference between the success and failure of a mission. In a setting with runners capable of surpassing the speed of light, artifacts that teleport in the blink of an eye, acrobatic fighters and warriors who fly with metal wings, movement is essential.

Zone

A **Zone** is the area where the action is taking place. An abandoned factory, a laboratory complex, the skies of **Metropolis**, or anything similar: it represents the place where everything is happening. It is not uncommon for there to be several Zones in a Scene, if the characters are fighting through the skies of the **City of Tomorrow**, they are in one Zone, while the **Daily Planet** building below them may be considered another distinct one.

Distances

Even in an abstract way, it is still important to define distances within the same Zone. The distances are **Adjacent**, **Close**, **Far**, and **Distant**.

Adjacent: Within arm's reach, generally engaged in melee combat. It is not necessary to spend movement actions to interact with a target that is Adjacent.

Close: Nearby, a few steps or leaps away. It is necessary to spend one movement action to bring a Close target to an Adjacent distance.

Far: Still visible, but requires a greater effort to get there. It is necessary to spend two movement actions to bring a Far target to an Adjacent distance.

Distant: Practically at the other end of a Zone. It is necessary to spend **three movement actions** to bring a **Distant** target to an **Adjacent** distance.

Target Distance	Actions Required
Adjacent	0
Close	1
Far	2
Distant	3

Powers such as **Super Speed** or **Speed Force** usually reduce the need to spend movement actions to reach an **Adjacent** distance from the target.

Ranged attacks, such as **Energy Beams**, thrown objects, and firearms, reach targets at different distances. Higher-Grade Powers can reach farther, as can more modern weapons and advanced technologies.

COMBAT ACTIONS

During combat, each character has **3 Actions** in a **Round**. These include Attacks, movement, the use of powers and strategic assistance. Actions represent everything a character can do in that span of time, and may be divided however the player wishes: move to an enemy, attack them, then pull away; attack twice in a row and activate a power or ability; use a gadget, attack, then move. Thanks to this flexibility, each Turn can be used in a tactical and creative way, promoting dynamic scenarios worthy of a comic book story.

The Three-Action Economy

As explained earlier, during a **Round**, a character has access to **3 Actions**. They may be used all at once during the Turn, or they may be reserved for **Reactions**, which are a specific type of Action that breaks Initiative order.

As a rule, Actions are not interchangeable between different Rounds; a character cannot, for example, "bring forward" their Actions from the next Round into the current one, gaining six Actions and then having none in the following Round. In addition, Actions not used by the end of that Round are lost.

Reaction

This is a specific type of Action performed in response to another, requiring a trigger, such as actively blocking a strike or getting out of the way of a shot. To use a **Reaction**, the character must have at least **one Action** remaining from their total that Round.

Attack

Cost: 1 Action

An Attack action involves a direct blow, such as a punch, a shot, or a sword slash. When a Hero makes an Attack, they make an **Attack Test** against the target's **Defense value**. If successful, they deal Damage directly to the target's **Resolve**.

Attack Test

When making an **Attack Test**, always roll **1d20 + Accuracy + Attack Bonus** to determine the result. In most cases, an Attack Test will always be compared to the target's **Defense**.

Melee Attack

This is made using hands or melee weapons. It generally occurs when two opponents are at **Adjacent** distance.

Ranged Attack

This type of attack involves projectiles such as bullets, arrows, blasts of fire, or laser beams. It is made against targets that are **one or more distances away** from a Hero. Depending on the Grade of the Power, the quality of the weapon, or the technology involved, an Attack may reach **Close**, **Far**, or even **Distant** targets.

Unless explicitly stated otherwise, **Ranged Attacks** suffer **Disadvantage** when made at **Adjacent** distance.

Splash Page

In an Attack, a **Splash Page** only occurs if the character exceeds the target's **Defense** by **10 or more**. When that happens, the number of dice rolled for **Damage** is doubled.

Multiple Attacks

A character may use as many available Actions as they have to attack in a turn, but if they do, they risk lowering their combat accuracy. Each additional Attack beyond the first causes the character to suffer -5 (cumulative with each subsequent attack) on their **Attack Tests** until the beginning of their next turn. A character's Attack count resets on their next turn, which means Attacks made as **Reactions** outside their Turn still count toward the total.

Penalty modifiers from different sources do not stack. If a character has one ability that changes the penalty to **-2 instead of -5** and another that changes it to **-3 instead of -5**, the character uses whichever is more favorable.

Attack	Penalty
2nd Attack	-5
3rd Attack	-10
4th Attack	-15
5th Attack	-20

Activation

Cost: Variable

Activating a **Power**, **Maneuver**, **Archetype Ability**, and similar effects requires an **Activation**. As a rule, this requires **1 Action**, but that number may vary as indicated in the description.

Dodge

Cost: 1 Action (Reaction)

A **Dodge** occurs when a Hero quickly moves out of the way of an incoming attack. When that happens, the Hero's **Agility** is added to their **Defense** until the end of the **Turn**.

Block

Cost: 1 Action (Reaction)

A **Block** occurs when a Hero prepares to absorb the impact of an attack, increasing their Defens-

es. When a Hero uses **Block**, they add **Resistance** to their **Defense** against the next incoming **Attack**.

Extend Range

Cost: 2 Actions

A Hero may take a deep breath and prepare to make a **Ranged Attack** with a weapon; the Hero may extend the range by **1 Distance**, spending **2 Resolve**.

Disarm

Cost: 3 Actions

You may remove a weapon that the target is carrying. Make an **Opposed Test** against the target. If the action involves brutally tearing a sword from the target's hands, use **Potency**; if you shoot the target directly in the hand so that they drop the pistol, use **Accuracy**. There are countless ways to disarm someone, and virtually any Attribute may be used in this situation. The target decides which Attribute they will use in the Opposed Test.

Help

Cost: 1 Action + Movement Actions

Often on the battlefield, Heroes need to assist their allies. The **Help** action includes rescuing, moving someone out of the way, or even applying medical care to fallen allies. **Help** is an umbrella term that includes all of these possibilities.

Move

Cost: 1 Action + Movement Actions

Sometimes an ally is unable to leave a dangerous place, such as the edge of a volcano about to erupt, and that is when you fly, run, or even pilot a vehicle toward them. You spend Movement Actions normally to reach your ally, and **+1 Action** to relocate them up to **1 Distance** from your point of origin.

Cover

Cost: 1 Action

You provide strategic cover for your ally, whether through a hail of bullets, a smoke bomb, or a powerful gust of wind. The next Attack against your ally suffers **Disadvantage**.

Defend

Cost: 3 Actions

You strategically position yourself to defend an ally **Adjacent** to you, placing yourself between them and their attacker. Until the beginning of your next turn, Attacks made against that ally suffer Disadvantage, while Attacks made against you gain **Advantage**.

THE DOOMSDAY CLOCK

In **Rescue scenes**, **missions**, or even long-term villainous plans, the Editor draws a circle and divides it into several parts: this is the **Doomsday Clock**. It is a tool that represents the progress and complexity of danger in a Rescue scene.

Each time the Heroes fail, the group takes too long to act, or an external force such as a villain or a catastrophe makes things worse, the Editor advances the clock as a way of showing that the danger is approaching and drastic consequences are near.

Completing the Clock

When completely filled, the clock triggers the worst possible scenario, and the Heroes fail. The civilians are not saved, the bomb explodes, and the catastrophe is not contained. Now the Heroes must deal with the consequences, such as public opinion, the weight of failure, and the villains completing their objectives.

Four-Part Clock: The Hospital Explosion

A four-part Clock represents moderate challenges, but ones that require coordination and teamwork to resolve.

A bomb has been planted in a downtown Hospital. They must act quickly before the worst happens!

First Part Filled

Panic sets in when the alarms sound, and the population rushes out in desperation.

Second Part Filled

Smoke and soot spread throughout the place, making action more difficult.

Third Part Filled

Only a few minutes remain before the bomb explodes. The Heroes need to find it as fast as possible!

Henchmen appear to cause even more confusion.

Fourth Part Filled

The Heroes fail to stop the explosion. Many civilians are injured and the hospital's structure is damaged.

Each time a Hero fails a **Heroic Action** in **Rescue scenes** or during a mission, one part of the Clock is filled. When the Clock fills all its parts, the Heroes fail the Rescue, and the worst happens.

HEROIC ACTIONS

Like combat, Rescue Scenes are divided into Turns and Rounds. Heroic Actions are broad and varied, encompassing a different number of maneuvers and stunts a Hero can perform. On their Turn, a Hero can perform up to three Heroic Actions, and can choose how many of it they will use: the bigger the number of actions spent on a Heroic Action, the bigger are the chances of succeeding.

Number of Actions

A Hero can choose to focus on several different tasks, such as rushing into a burning building to rescue falling civilians, putting out the flames, and still coordinating firefighters in a joint effort to contain the rest of the fire. This is entirely possible, but the more different tasks a Hero attempts to perform in this way, the more difficult their job becomes.

In JLU RPG, the more a Hero focuses on a single objective during a Rescue Scene, the better, after all, teams work together to cover as much ground as possible. For each Action a Hero spends focusing on the same Heroic Action, their chances of success increase.

1 Action: If a Hero uses one of their Actions to save the civilians from the burning building, they make the roll against the Tension established by the Editor normally.

2 Actions: If the Hero uses two of their three available Actions to save the civilians from the burning building, they gain Advantage on the Test.

3 Actions: If the Hero uses all three of their Actions to save the civilians from the burning building, no Test is required, and the Hero treats their result as a 20 for the purposes of the Test. However, if a result of 20 is still insufficient to meet the required Tension number, the action is considered a failure.

Heroic Effort

In a **Rescue Scene**, a Hero may go beyond their limits, putting themselves at risk to save those in need. **Heroic Effort** allows the Hero to mark a **Condition** in order to receive an **Extra Action** on their Turn or recover an amount of **Resolve** equal to their **Tier base**.

Examples of Heroic Actions

Remove Debris

Buildings collapse, bridges fall. Situations like these require a Potency or **Resistance Test** against **Tension**.

Failure: Lose 2 Resolve.

Calm the Population

Panic is one of the great dangers in risky situations, and preventing the crowd from losing control is essential.

Test: Spirit vs. Tension

Failure: Mark the **Stunned** Status.

Command the Crowd

Bringing a crowd to safety in an organized way is essential to ensure the success of a rescue and avoid harm.

Test: Mind vs. Tension

Failure: Mark one Condition.

Save the Falling

The critical moment when civilians are falling from collapsing places or hanging from a precipice requires quick action.

Test: Agility vs. Tension

Failure: Lose 5 Resolve; if you have no Resolve, mark **two Conditions**.

Contain Environmental Threat

A fire spreads, a chemical leak fills the air with toxic gases, or high-voltage cables come loose, threatening to electrocute everyone. The Hero must use their powers or quick thinking to isolate or neutralize the danger.

Test: Mind or Spirit vs. Tension

Failure: The Hero is caught by the danger. Gain the **"Engulfed"** Status (burned, poisoned, etc.), and the **Doomsday Clock** advances **one extra segment**.

Disarm Device

A time bomb is about to explode, a nuclear reactor is overloading, or an unstable portal threatens to suck in everything around it. Time is running out, and a steady hand or a brilliant mind is required.

Test: Mind or Accuracy vs. Tension

Failure: The device becomes even more un-

stable. The **Doomsday Clock** advances **two segments immediately**.

RECOVERY

Heroic life takes its toll, and even the mightiest of Heroes still suffers harm after an intense mission or brutal combat. Even if you are made for action, recovery is still necessary.

Recovering Resolve

Resolve is the resource Heroes will use most. Recovering it is simple: all spent Resolve is restored at the beginning of a new **Scene**, as long as the Hero pauses to clear their head, take a deep breath, and prepare for another challenge. In other words, Heroes need to go through an **Interlude Moment** to recover their Resolve points.

If an **Interlude Moment** turns into a **Danger** or **Combat** scene, at the Editor's discretion, Heroes recover only **half** of their Resolve.

Recovering Conditions

Conditions do not recover as easily as Resolve. Of course, **Scratched** and **Tired** disappear at the end of a Scene, but the rest of the Conditions require the Heroes to recover in a more elaborate way. At least one **Interlude Moment** focused on healing is necessary, in which the Heroes withdraw to a safe place and recover their strength. Here, if the **Interlude Moment** is interrupted by some danger or villain, the Conditions remain.

DEATH

It is already a well-worn comic-book cliché: no one really dies, and when it happens, they do not stay dead for long. Deaths in **JLU RPG** are rare, and even if a Hero is **Defeated** by a powerful enemy, they still live to see another day.

A Hero only dies if the player decides that this is the appropriate moment for their departure. Maybe it was while fighting a powerful enemy, sacrificing themselves to defeat evil, or they spent all their energy saving innocents from disaster and perished in the process. Sacrifice and altruism are intrinsic to Heroes, and the death of a character can provide continuity for many future **Issues**.

THREATS AND VILLAINS

Not every battle is decided on top of a skyscraper against an evil genius.

Often, justice is forged on dirty asphalt, in abandoned laboratories, and in skies filled with nameless enemies. It is the sound of the claws of an **Arkham Aberration** echoing in an alley, the collective hum of a swarm of **Parade-mons** descending upon the city, or the empty stare of a **Street Thug** who is only there for the paycheck. These are considered **Threats**, ordinary enemies encountered by Heroes. **Villains**, on the other hand, are dangerous beings worthy of a name.

Special Abilities

Some threats and villains possess Special Abilities, which are unique feats that change the course of a battle. While a Villain is able to act at the end of each Hero's turn, even if they have no Actions left, threats with the Brute descriptor deal more Damage with their attacks.

LIST OF THREATS

Tier D Threats

These threats can cause trouble in large numbers. They have **3 Condition boxes**.

League of Shadows Assassin

Furtive

Attributes: Potency +0, Accuracy +3, Agility +3, Resistance +1, Spirit 0, Mind +1

Resolve: 10

Defense: 12

Attack: +5 [Katana/Shuriken] **Damage:** 2d6+2 [Physical]

Powers: Martial Training 1 [Swordsman], Subterfuge [Knowledge]

Special Abilities:

Stealth Attack: If they attack an unaware target, the attack deals **+1 additional Damage Die**.

Silent Shadow: Gains **Advantage** on **Agility Tests** to sneak or hide.

Street Thug

Minion

Attributes: Potency +1, Accuracy -1, Agility +1, Resistance +1, Spirit 0, Mind -3

Defense: 10

Attack: Pistol [+2] **Damage:** 1d6+1

Special Abilities

Just a Minion: A minion is defeated upon suffering any amount of Damage.

Parademon

Attributes: Potency +3, Accuracy +1, Agility +1, Resistance +3, Spirit 0, Mind -1

Resolve: 10

Defense: 11

Attack: +4 [Melee - Fists/Simple Weapon] **Damage:** 1d6+3 [Physical]

Powers: Super Strength 1, Flight 1

Special Abilities

Darkseid Is: When the Parademon is defeated, its body explodes, dealing **1d6 energy damage** to all who are **Adjacent** to it.

Tier C Threats

These threats are capable of putting an entire city at risk. They have **4 Condition boxes**.

Cybernetic Tyrannosaurus

Brute

Attributes: Potency +9, Accuracy +3, Agility -1, Resistance +9, Spirit 0, Mind -3

Resolve: 18

Defense: 20

Attack: +10 [Melee - Fangs/Claws] **Damage:** 2d6+9 [Physical]

Powers: Super Strength 2, Enhanced Resistance 2, Exoskeleton 1 [Armored Defense, Integrated Weaponry - Laser]

Special Abilities:

Relentless Strength: The Brute's first **Damage roll** in a Turn is made with **Advantage**.

LexCorp Tactical Android

General

Attributes: Potency +6, Accuracy +6, Agility +3, Resistance +6, Spirit +3, Mind +3

Resolve: 18

Defense: 18

Attack: +10 [Ranged - Energy Blast] **Damage:** 1d6+6 [Energy]

Powers: Super Strength 1, Enhanced Resistance 1, Energy Blast 2

Special Abilities:

Tactical Movement: At the beginning of its turn, the General may move **1 ally** by **1 Distance**.

Metal Sentinel

Brute

Attributes: Potency +6, Accuracy +1, Agility 0, Resistance +9, Spirit 0, Mind -1

Resolve: 18

Defense: 20

Attack: +8 [Melee - Metal Fists] **Damage:** 2d6+6 [Physical]

Powers: Enhanced Resistance 2, Body Metamorphosis 1 [Hardened], Super Strength 1

Special Abilities:

Relentless Strength: The Brute's first **Damage roll** in a Turn is made with **Advantage**.

Harden: May spend **1 Resolve** to increase its **Damage Reduction by +1 per Round**.

VILLAINS

Villains are dangerous and treacherous, and they do not follow the same rules as Heroes: they fight dirty. Whether by taking hostages or stealing candy from children, Villains are the worst! As the Editor, you need to use Villains in a cunning and, to be honest, unfair way.

Villains have **7 Condition boxes**.

Captain Boomerang

Category: Tier C

Origin: Human

Villain

Protocol: George "Digger" Harkness operates under the alias **Captain Boomerang**. Using a variety of boomerangs with many different functions, this sarcastic, opportunistic criminal is an excellent marksman. His skill with these unusual weapons gives him an edge: while armed forces may wear bulletproof vests, no one really expects a criminal to use a boomerang in a bank robbery.

Do not underestimate him because of his weapon choice: this villain is extremely lethal and has already been part of several groups beyond the Rogues, such as the **Suicide Squad**.

Contingency Plan: Captain Boomerang is, above all, a mercenary. He will never place any objective above his own safety, and he has a tendency to betray his allies in critical situations. All of these traits make him predictable in negotiations. Despite lacking superhuman abilities, Harkness compensates with his accuracy and vast arsenal of boomerangs.

His excessive confidence and need to demonstrate superiority can be used against him: a good taunt is capable of completely destabilizing the villain.

Attributes: Potency +3, Accuracy +9, Agility +6, Resistance +3, Spirit +6, Mind +3

Resolve: 36

Defense: 18 (**Damage Reduction 1 / Damage Reduction 2** against projectiles)

Attacks: Boomerang +15. Damage: 2d6+8 (**Distant / Physical**)

Powers: Marksman 3 (Favorite Weapon, Special Ammunition, Ricochet Shot, Improved Special Ammunition)

Equipment: Kevlar Suit, Smoke Bomb, Grappling Gun, Boomerangs, Tracker.

Special Abilities

Villain: Captain Boomerang gains **1 Action** that does not count toward the Round's action total at the end of each Hero's Turn.

Guaranteed Return: Once per **Round**, when he misses an Attack against a target, at the end of the turn Captain Boomerang may make a new Attack against the same target, dealing **half Damage** on a hit.

Talon

Category: Tier C

Origin: Human

Villain Furtive

Protocol: This is the name given to elite assassins of the **Court of Owls**, a secret cult of Gotham City's elite. Trained since childhood—and sometimes resurrected for that very purpose—a Talon is a silent killer and a skilled fighter. In addition, they are excellent trackers and loyal soldiers, the result of the brainwashing they receive from the Court. They are true urban legends that allow the Court to maintain its control over all of Gotham.

Contingency Plan: A Talon is a relentless hunter and will always use the environment to their advantage. Once they have a clear objective, they will go to the end to fulfill it, whatever the cost. That means concepts such as honor or a fair fight do not exist: when at a clear disadvantage, a Talon will retreat into the shadows. Using false targets to draw the Talon's attention and only then attacking has already proven effective in some situations.

Attributes: Potency +6, Accuracy +9, Agility +9, Resistance +6, Spirit +6, Mind +6

Resolve: 35

Defense: 20 (Damage Reduction 3)

Powers: Martial Master 3 (Acrobatic Fighter, Precise Strike, Fists of Steel, Body Fortification), Swordsman 2 (Precise Attack, Sudden Charge, Barrage of Blows)

Attacks:

Fists +10. **Damage:** 2d6+6 (Physical)

Katana +12. **Damage:** 2d6+8 (Physical)

Throwing Daggers (Close) +8. **Damage:** 1d6+6

Knowledge and Traits: Subterfuge, Affiliation (Court of Owls)

Special Abilities

Villain: Talon gains **+1 Action** that does not count toward the total action count at the end of each Hero's turn.

Gift from the Court: At the beginning of the **Round**, choose one piece of **Gear** from the Equipment list. You may use it once until the end of the Round.

Shadow Strike: When hidden in the shadows, Talon gains **+1 die** on their **Damage rolls**.

Captain Cold

Category: Tier C

Origin: Human

Villain, Genius

Protocol: Leonard Snart operates as a criminal under the alias of Captain Cold. Possessing a brilliant mind, the villain uses cutting-edge technology, primarily through his powerful Cold Gun, capable of generating extremely powerful freezing blasts to operate in Central City.

While wielding his Cold Gun, he has access to various ice-manipulation abilities creating barriers, freezing blasts, manifesting slippery surfaces, and much more.

Contingency Plan: Despite his high destructive power, Captain Cold remains entirely dependent on his Cold Gun.

Attributes: Potency +6, Accuracy +9, Agility +6, Resistance +3, Spirit +12, Mind +9

Resolve: 62

Defense: 20

Powers: Energy Blast G2 (Ice), Elemental Manipulation G2 (Ice), Marksman 3 (Favorite Weapon, Ricochet Shot, Instinctive Shooter, Barrage of Shots)

Attacks: Ice Blast +15. Damage 2d6+15 (Close/Ice)

Knowledge and Trait: Tech, Pocket Gadgets

Equipment: Cold Gun: When using the Cold Gun, Captain Cold gains access to Energy Blast and Elemental Manipulation.

Special Abilities

Villain: Captain Cold gains 1 Action that does not count toward the Round action limit at the end of each Hero's turn.

All Part of the Plan: Once per Scene, when targeted by an attack, Captain Cold may declare that it was all part of the plan to negate the incoming hit.

Cold Aura: Captain Cold gains +2 Defense (already included) and takes half damage from attacks that deal cold damage.

Ice Age: Once per Campaign, Captain Cold may completely destroy his Cold Gun, absorbing its powers. When he does so, he gains all of its Powers without needing to wield it, becoming a Meta-Human. Additionally, he gains +4 Defense and 15 Resolve, becoming a Tier B threat.

Practical Knowledge: At the beginning of the Scene, Captain Cold may choose one ability

from a Knowledge. He receives that Knowledge until the end of the scene.

Speedster Hunter: Captain Cold deals +1 Damage Die to characters who possess the Speed Force.

Robin

Category: Tier: C

Origin: Human

The Anti-Hero

The son of Bruce Wayne and Talia al Ghul, Damian Wayne was raised to be the ultimate weapon of the League of Assassins. Now, as the current Robin, he struggles to reconcile his lethal training with his father's moral code. Arrogant, violent, and incredibly skilled, Damian is a hero in constant inner conflict, seeking to prove his worth while suppressing his darker instincts.

Roleplaying Tips: Damian is what happens when you pair arrogance with lethal precision. He considers himself superior to everyone in the room. Do your best to end battles quickly and brutally.

His journey is about learning to be a hero, not an assassin. Moments of vulnerability, or reluctant respect for his peers, are key to his development.

Attributes: Potency +6, Precision +6, Agility +6, Resistance +6, Spirit +3, Mind +6

Resolve: 25

Defense: 22

Attacks: Katana + 11. Damage 1d6+7 (Physical)
Martial Strikes + 7. Damage 1d6+6 (Physical)

Powers: Swordsman G2 [Singular Weapon(Katana), Precise Strike, Violent Attack, Parry Blow], Martial Master G2 [Acrobatic Fighter, Precise Strike, Acrobatic Kicks]

Archetype Skills:

Dirty Boxing

All this talk of heroism, playing fair, and being just sounds great on paper, but on the street, the only rule is survival. A dirty trick when your opponent isn't looking is worth more than a speech full of pretty words. Once per Round, when you hit a target with an Attack, you can spend 2 Resolve Points and an Action to deal +2 Damage per Tier.

I Follow Other Rules

You don't follow the conventional heroic playbook. Once per Issue, when you do something morally questionable, you can use one of the Editor's Editorial Points as if it were a Plot Point.

Equipment: Katana (Martial Weapon), Smoke Bomb [2 Pax]

Traits: Nepobaby (Affiliation: Bat-family), Pocket Gadgets [4 Pax]

Knowledge: Strategy, Tech, Subterfuge

Limitations

Bad Reputation: In Rescue scenes, the Resolve cost of abilities increases by 2.

Paranoia: Damian suffers from intense paranoia, distrusting everything and everyone around him.

LINES OF DEFENSE

What you hold in your hands is your first call to action, an invitation into the heart of the **DC Universe**. “**Lines of Defense**” is a complete introductory adventure, designed specifically for **Justice League Unlimited RPG: Quickstart**.

This story was created to be the ideal starting point for new players and Editors. It serves as a baptism of fire, teaching the rules and the game's dynamics through action and dramatic choices. Within these pages, you will find everything you need to assemble your team, use the three pre-generated Heroes, and dive headfirst into a crisis that will shake the very structure of the City of Tomorrow.

Consider this your “**issue number one**.” The legend of your team begins here.

Adventure Summary

Lines of Defense brings together a group of Heroes (either those presented through the ready-made sheets in the book, or entirely new ones created by the group) who find themselves in the eye of the storm during an invasion of **Metropolis** by **Hank Henshaw, the Cyborg Superman**, who has brought with him an army of **Eradicators**. This invasion mobilizes not only the great Heroes, but also rookies who must act to prevent the destruction of the city. In the middle of all this, the **Parasite**, a villain already known in the city, sees in the conflict an opportunity to become even more powerful—and he is hungry.

Information for the Editor

Hank Henshaw's arrival in Metropolis should feel traumatic. Begin with the sound: a scream of metal tearing through the sky that forces people to look upward. Then show his ship, “**The Engine of Annihilation**,” appearing like a scar on the horizon, a profane mass of Kryptonian technology blocking the sun and casting a cold shadow over the city.

Make the Justice League's battle redraw the city's map in real time. Their fight happens blocks away, but its consequences are immediate for the players. A green flash in the sky is followed by a car falling from an elevated roadway, creating a new obstacle. The sonic boom of Superman colliding with Henshaw causes the windows of an entire block to shatter, forcing the Heroes to protect themselves.

THE PRELUDE

It was just another ordinary day in the **City of Tomorrow**: the hum of the monorail mixed with millions of voices, and the smell of strong coffee made it clear that the morning had begun. From **Stryker Island** to **Queensland Park**, the whole city moved like a superorganism.

Somewhere in the middle of all this are the young Heroes: drinking coffee on the sidewalk, stuck in traffic, admiring the magnificent **Lex-Corp Tower**, or simply being another face in the crowd. But as with every good comic-book story, that was not going to last much longer.

From every radio, screen, cellphone, and practically any electronic device possible, a voice—half man, half static—spoke:

KAL-EL. I HAVE SEEN THE END OF WORLDS. TODAY, I HAVE COME TO BRING YOUR END.

It is **Cyborg Superman**, and an invasion has begun. Metal and soot fall from the skies, which quickly turn gray. In an instant, a peaceful day has become apocalyptic. Someone needs to save the day.

Suddenly, another voice, also robotic but more... kind, comes through to the Heroes:

NEW ASSETS IDENTIFIED. THIS IS RED TORNADO, COORDINATING THE JUSTICE LEAGUE'S CONTAINMENT RESPONSE.

THE PRIMARY THREAT, DESIGNATION 'HENSHAW,' IS BEING ENGAGED. THE LEAGUE NEEDS YOU STAND BY FOR MY ALERT.

THE DOOMSDAY CLOCK — PARASITE'S ADVANCE

Parasite, who had been imprisoned and weakened, saw in the invasion an opportunity to regain his strength. This Clock represents his journey to become a catastrophic-level threat. His final goal is to reach and feed on the nearly limitless energy of “**The Engine of Annihilation**,” Cyborg Superman's ship. If he succeeds,

he will grow to colossal size, becoming a **Tier S** monster that not even the already overburdened **Justice League** could stop.

Fill in one segment whenever the Heroes fail a mission that could have revealed a clue about the Parasite, when they take too long to connect the points of the investigation, or simply to represent the passing of time as the villain's hunger drives him through the city.

Escalating the Conflict: Advancing the Clock

This Clock is the countdown to a **second apocalypse**. Use the suggestions below to show the players the consequences of their delay, making the threat of the Parasite more and more present and tangible.

- **With 2 segments filled**, the blackouts that were previously sporadic begin to form a visible pattern on any city map. Red Tornado may report:

SECONDARY ANOMALY
CONFIRMED. MULTIPLE BLACKOUTS FORM
A CLEAR DIRECTIONAL VECTOR.
CAUSE UNKNOWN.

The trail is becoming obvious.

- **With 4 segments filled**, the Parasite performs his first major feeding, perhaps draining an entire substation. He grows in power, and his **Potency**, **Resistance**, and **Agility** increase by +3. Reports of a "**purple monster**" or a "**hungry shadow**" begin to appear on emergency channels, mixed with reports of the Eradicators.
- **With 6 segments filled**, the Parasite reaches the **New Troy Waterfront**, the area directly beneath "**The Engine of Annihilation**." He is close to his objective. The ship's massive energy begins to fluctuate, an effect that may be noticed by the League. Red Tornado's voice may grow more tense:

THE HENSHAW THREAT ENERGY
SIGNATURE IS BECOMING UNSTABLE.
AN EXTERNAL DRAIN SOURCE HAS BEEN
DETECTED. IDENTIFY AND NEUTRALIZE.
THE LEAGUE CANNOT BE DIVERTED.

The Heroes' mission becomes the most critical of all. The Parasite's Damage increases by one step.

- **With 8 segments filled**, it is too late. The Parasite manages to connect to the ship, perhaps through an energy tentacle or by climbing a terraforming beam. He begins absorbing its power, growing to colossal size above the city. The adventure becomes a catastrophic failure.

PHASE 1

A City in Freefall

Red Tornado has directed the Heroes to **Sector 4 of Metropolis**, so that they can help civilians in danger.

The first phase places the Heroes in the middle of the war zone that Metropolis has become. As Editor, this section serves to let the players (you included!) get used to the idea of being, well, Heroes. There are several problems happening simultaneously with Henshaw's arrival, and your role as Editor is to present a living and desperate scenario. Describe what the Heroes see, hear, and feel, and let them decide where to run first.

THE AIR IN SECTOR 4
IS THICK WITH SMOKE AND THE SOUND
OF CAR ALARMS. TO YOUR LEFT, TOWARD
THE NEW TROY WATERFRONT PIERS, A
COLUMN OF BLACK SMOKE RISES, AND
THE SHARP SCREAM OF METAL
TEARING APART ECHOES ACROSS
THE WATER.

TO YOUR RIGHT, THE ENTRANCE
TO A SUBWAY STATION SPEWS SMOKE
AND THE MUFFLED CRIES OF PEOPLE
TRAPPED UNDERGROUND AND DIRECTLY
AHEAD OF YOU, A SMALL GROUP
OF ERADICATORS MARCHES
TOWARD A SCHOOL BUS THAT HAS
OVERTURNED IN THE MIDDLE OF
AN INTERSECTION.

The players have total freedom to choose which crisis to address, or whether they will try to deal with more than one at once. Each location is a node of opportunity for heroism.

The Eradicators: During Phase 1, there is a chance that Eradicator bots attack the group. At the start of each Scene, the Editor rolls 1d6; on a result of 1–2, three Eradicators appear.

The Rescue at Stryker Island Ferry

The ferry is sinking. Eradicators march along the pier.

Sergeant Gus Haddock, with his leg trapped, tries to protect a group of prisoners, including the frightened **Helen Rice**, a young girl with newly discovered powers whose hands crackle with electricity.

Freeing the sergeant may require a Potency feat. Calming Helen so that she will help may require a **Spirit Test**. Extinguishing a fire approaching the fuel tank may require elemental powers or a **Mind Test** to activate the pier suppression system.

Remove Debris: Freeing the sergeant from the twisted steel beam will require a Potency or **Resistance Test** against the Scene's **Tension**. On a failure, the effort takes its toll, and the Hero loses **2 Resolve**.

Calm the Population: Calming the terrified **Sofia** so that she controls her powers and helps with the evacuation will require a careful **Spirit Test**. Failing here means that her panic becomes contagious, leaving the Hero with the **Stunned** Status from the wave of fear and electricity.

Contain Environmental Threat: The fire approaching the fuel tank must be contained. This may require elemental powers or a **Mind Test** to activate the pier's suppression system. A failure results in the Hero being caught by the danger, gaining the **"Engulfed"** Status (**burned**) and causing the **Hunger Clock** to advance one extra segment.

Wonder Woman appears, fighting a villain who tried to escape together with a dozen Eradicators. She sees them.

THE PIER
WON'T HOLD!

she shouts.

GET EVERYONE
OUT OF HERE! I'LL HOLD
THIS POSITION!

The Silence of the Underground

A subway train is trapped, and Eradicators are drilling through the tunnels.

One car has derailed, trapping **Abdul's** leg. His daughter, **Anna**, is beside him, suffering an asthma attack, her inhaler lost.

Lifting the subway car is a **Potency challenge**. Finding Anna's inhaler in the dark is a focused **Mind Test**.

The Clues: When trying to reactivate the power, a technical Hero may discover that the cables have been drained. In an access tunnel, they find the shell of an Eradicator, gray and inert.

The Collapse of Shuster Bridge

One of the bridges connecting **Sector 4** to the rest of Metropolis has been damaged by a stray blow from the battle in the sky. The structure is giving way, with dozens of cars and civilians trapped on it.

The scene is pure disaster. Cars hang over the edges, and the asphalt is cracked. The Heroes must act quickly to evacuate the civilians before the bridge collapses.

A mass evacuation may be coordinated with a **Spirit Test** to calm the panic. Preventing a school bus from sliding toward the edge may require a **Potency Test**. A Hero with flight or agility powers may be crucial for reaching people trapped in isolated vehicles.

Command the Crowd: A mass evacuation, guiding people away from the most unstable part of the bridge, may be coordinated with a **Mind** or **Spirit Test**. A failure in inspiring order leads to panic, and the Hero marks a **Condition**.

Save the Falling: Saving civilians from a car sliding toward the edge of the abyss will require quick action, an **Agility Test** against **Tension**. Failing at this critical moment is devastating; the Hero loses 5 Resolve. If they do not have enough Resolve, they must mark a **Condition** from the trauma of nearly losing a life.

Clue: The bridge's emergency warning system is dead. A **Mind (Engineering) Test vs. Tension 16** in one of the junction boxes reveals that all of the bridge's electrical wiring is cold. There is no current. The energy was not cut off; it was sucked out of the structure itself.

Fire at Metropolis Hospital

The energy fluctuations caused by the invasion have started a fire in the pediatric wing of **Metropolis General Hospital**. The emergency generators have failed, trapping patients and staff.

This is a classic rescue mission, but with high stakes. The Heroes need to navigate smoke-filled corridors, evacuate children and babies in incubators, and protect civilians from collapsing structures.

Containing the fire may require elemental powers. Evacuating patients in critical condition without medical equipment will require creativity and perhaps **Medicine** or **Mind Tests**. Failing tests here increases the danger clock.

Clue: In the generator room, a panicked head nurse may tell the Heroes what she saw:

THEY DIDN'T FAIL...
THEY SIMPLY... STOPPED. THE LIGHTS
FLICKERED PURPLE FOR A SECOND,
AND THEN... NOTHING. ONE OF THE
TECHNICIANS WENT TO CHECK...
HE DIDN'T COME BACK.

The technician's body may be found near the generators, showing the same symptoms as the "empty victims."

PHASE 2

The Hidden Threat

During the chaotic rescues of **Phase 1**, they will inevitably come across something that does not

fit: a cold and inert Eradicator with no signs of battle, power cables that seem dry and brittle, or a witness report of a "purple shadow." The first time they stop and question one of these anomalies, Phase 2 begins.

Your role as Editor is to encourage this curiosity. When they report their discoveries to **Red Tornado**, the hero's answer validates their findings:

ANOMALY CONFIRMED.
YOUR DATA MATCHES SECONDARY
ENERGY FLUCTUATIONS I AM
MONITORING. THE LEAGUE CANNOT BE
DIVERTED FROM THE HENSHAW THREAT. IF
SOMETHING ELSE IS MOVING IN
THE SHADOWS, YOU ARE METROPOLIS'S
ONLY HOPE OF EXPOSING IT.
KEEP ME INFORMED.

With this, the investigation mission is officially theirs—initiated and authorized. Sector 4 changes from a rescue zone into an investigation site.

Investigation Points

When the Heroes begin the investigation, there are several points they may follow, each with a different clue in the puzzle.

The Triage Post (Centennial Park)

At the edge of Sector 4, the cacophony of cries and sirens dominates. Amid civilians injured by debris, **Dr. Sarah Charles of S.T.A.R. Labs** is supervising a tent for anomalous cases. It is here that the Heroes may encounter the "empty victims."

Dr. Charles is frustrated, standing beside three patients on stretchers. They are in comas, pale and cold, but without a single scratch.

IT DOESN'T MAKE SENSE,

She murmurs.

THE READINGS SHOW CELLULAR
FAILURE. IT'S AS IF THE BATTERY IN
EACH OF THEIR CELLS HAS BEEN...
TURNED OFF.

A Hero with **Medicine Knowledge** may perform a more detailed examination. A **Mind Test vs.**

Tension 17 will reveal a faint and strange residual energy signature of a bioelectric nature.

Editor's Box: Encounter with the Man of Steel

The Scene: The Heroes are on a rooftop. Suddenly, the air splits open. A **Hunter Eradicator** crashes down near them. Before they can react, a red-and-blue blur slams into it. Seconds later, **Superman** lands softly. He looks tired. He does not look at the Heroes, but at the street below, at the civilians they have just saved. He turns, and his face carries the gratitude of a fellow Hero. He simply nods.

KEEP GOING,

He says.

METROPOLIS NEEDS YOU.

Before they can respond, he launches back into the sky.

The Darkened Laboratory

A blackout hits one city block that had, until then, remained stable. **Red Tornado** may report the anomaly, or the Heroes may witness it themselves. The center of the blackout is a discreet **S.T.A.R. Labs annex**. The doors are electronically locked, but without power.

The interior of the laboratory is dark and silent. The terminals are dead. In the main laboratory, a reinforced-glass containment cell has been shattered, with the shards thrown outward. Papers and datapads are scattered across the floor.

A search through the files (**Mind Test vs. Tension 15**) may reveal the purpose of the labora-

tory: to study and contain a bio-energetic entity referred to in the files as "**Subject R.J.**" or "**Parasite.**" The notes detail its ability to absorb energy, its insatiable hunger, and its weakness to massive overload. A final corrupted log entry reads:

THE INVASION...
THE ENERGY FLUCTUATIONS...
CONTAINMENT IS FAILING...
HE IS HUNGRY...

The Daily Planet

The **Daily Planet** newsroom has become the unofficial heart of the civilian resistance. **Lois Lane** and her team are gathering reports from across the city, trying to assemble a general picture of what is happening.

The place is a center of frantic activity. The Heroes are not the focus here; they are a potential source. Lois stands in front of a large digital map of **Metropolis**, marking the locations of anomalous blackouts.

The Heroes may share the information they have gathered—about the victims, about the **S.T.A.R. Labs** laboratory. In return, Lois and her team can provide witness reports of a "**purple shadow**" seen near each blackout. Together, on Lois's map, they can trace the Parasite's path. The line will not be random. It will move inexorably toward the greatest symbol of power on the map: **NEMe Substation Seven**.

OH NO,

Lois whispers.

IT'S FEEDING AND HEADING FOR THE SHIP

The Parasite's ultimate goal is revealed, giving the Heroes a destination and a deadline.

PHASE 3: THE HEART OF HUNGER

The investigation leads the Heroes to **NEMe Substation Seven**. The goal is to stop the **Parasite**, and there are multiple ways to do it.

The Parasite is feeding on the main reactor. In a control room, **Dr. Emma Carter** and **Dominik Jones** are trapped with the life support failing. The Heroes may choose their approach:

Tactical Approach: Fight to reach the control room and use the terminals to initiate an emergency reactor shutdown. This will require **Mind (Tech) Tests** while defending themselves from the Parasite.

Brute Force Approach: Ignore the controls and try to physically destroy the armored conduits feeding the Parasite, a task that requires massive feats of **Potency**.

Containment Approach: Focus on rescuing the technicians first, breaking the armored glass of the control room, knowing that **Dr. Ramirez** may know a faster way to stop the reactor.

Direct Approach: Face the Parasite head-on, trying to overpower him before he becomes too strong.

What to Do if the Heroes Get Stuck?

In the Investigation: If they cannot follow the Parasite's trail, Red Tornado may intervene.

I AM DETECTING A META-HUMAN ENERGY SIGNATURE IN MOTION, CONSISTENT WITH THE ANOMALY. PROBABILITY INDICATES THE TARGET IS NEME.

In Combat: If the fight is going badly, use the environment. A high-voltage cable comes loose, creating both a danger and a weapon.

In the Rescue: If the Heroes do not have the right power for a task, one of the civilians may have an idea.

I'M AN ENGINEER! IF YOU CAN COVER ME, MAYBE I CAN USE THE EMERGENCY BRAKE!

HOW THE ADVENTURE ENDS

The ending is shaped by the Heroes' performance in the sandbox.

Undisputed Victory: [They succeeded in almost every crisis.] After the victory, they witness Superman defeat Henshaw and imprison him in the **Phantom Zone**.

Bitter Victory: They stopped the Parasite, but failed in an important rescue.

The Shadow of Failure: [They failed to stop the Parasite.] The League cleans up the mess.

AN EPILOGUE AND AN INVITATION

This Scene takes place after the Parasite's defeat. The Heroes are exhausted, at the epicenter of the destruction they caused in order to save the city. They are alone, and the sound of the main battle still echoes in the sky.

The air splits with a continuous clap of thunder. Looking upward, the Heroes witness the climax of the battle for the soul of **Metropolis**. **Superman** and **Cyborg Superman** are two comets in a dance of destruction, their blows lighting the dark clouds. The fight is brutal, a mirrored image of power and pain. They see **Henshaw** gain an advantage, his cannon arm charging with a red explosion of energy that promises the end.

But then, something happens. From the shadows of the **Watchtower**, invisible to the naked eye, a beam of flickering silver light cuts through the sky, striking Henshaw in the back.

The energy paralyzes him for a crucial instant. It is the opening Superman needed. With a cry that is part fury and part lament for his fallen enemy, Superman delivers the final blow, shattering the cyborg's armor and spirit.

The beam of light expands, becoming a silent spinning portal. It is the **Phantom Zone**. Coordinated by **Batman**, the projector imprisons the cyborg. With one final scream of hatred directed at Superman—

THIS DOES NOT END HERE, KAL-EL!

—Hank Henshaw is sucked into eternal nothingness. The skull-ship, without its master, falls silent, its lights go out, becoming a dead husk in the sky. The silence that follows is absolute.

The next day, while the Heroes are recovering, Superman lands a few meters away from them.

RED TORNADO SENT ME THE REPORTS,

He says, his voice lower than they expected, more human.

WHILE WE WERE FIGHTING
A GHOST FROM MY PAST, YOU
WERE FIGHTING A MONSTER NO ONE
SAW COMING. YOU SAVED LIVES.
YOU SAVED THE CITY FROM A
SECOND DISASTER.

He steps forward and hands the Heroes small silver metal cards, each engraved with the **Justice League** symbol. One for each of them.

Superman smiles, and for the first time, the morning sun truly seems to break through the clouds.

WELCOME TO
THE JUSTICE LEAGUE.

THREATS

Parasite (Rudy Jones)

Tier C, Brute/Villain

Protocol: Rudy Jones is the **Parasite**, a meta-human with the ability to absorb and feed on many different forms of energy. With the invasion, he found the perfect opportunity to absorb an absurd amount of energy from **Cyborg Superman's** ship.

Contingency Plan: Parasite is the embodiment of gluttony, and attacking him directly means only feeding him even more. In addition, he is extremely resilient. One way to deal with him is to overload him with more energy than he can absorb, incapacitating him.

Attributes: Potency +9, Accuracy +3, Agility +3, Resistance +9, Spirit +3, Mind +0

Resolve: 25

Defense: 19

Damage Reduction: 3

Attack: +5 (**Draining Touch**)

Damage: 1d6+9 (**Physical / Energy**)

Powers: Super Strength G2, Enhanced Resistance G2, Energy Absorption G3

Special Abilities:

Power Hunger: With each successful hit, he drains **1d6 Resolve** from the target and adds it to his own. If he drains a Hero with powers, he may use a **Grade 1 version** of one of that Hero's powers on his next turn.

Relentless Strength: The first Damage roll in a Turn is made with **Advantage**.

Kinetic Absorption

Activation: Reaction

Cost: 1 Resolve

When you suffer **Physical Damage** (impact, cutting, piercing), you may convert the pain into power. You ignore an amount of Damage equal to your **Resistance value** and gain **1 Charge** for every **5 points of Damage ignored**.

Energy Burst

Activation: 1 Action

Cost: 1 + Charge

You release stored energy in a concussive blast. Make a **Ranged Attack** using your **Spirit**. You may spend additional **Charge** before rolling to increase the blast's power: for each point of Charge spent, add +1 to your attack roll and to your final Damage.

Physical Augmentation

Activation: Free Action

Cost: 4 Charge

You channel the stored energy into your muscles. For the rest of the Scene, you may choose to increase your **Potency** or **Agility** by a value equal to your **Grade in this power**.

Eradicator

Tier E, Minion

Protocol: These robotic beings arrived together with Henshaw's invasion. They are weaker versions of the original Eradicator, but make up for it in numbers.

Contingency Plan: They act like simple robots, attacking without pause. They may be deceived or sabotaged due to their limited intellect.

Attributes: Potency +3, Accuracy +3, Agility +1, Resistance +1, Spirit 0, Mind +0

Resolve: 8

Defense: 12

Attack Bonus: +0

Attack: +3 [Optic Burst]

Damage: 1d6+3 [Close / Energy]

Special Abilities:

Just a Minion: Is defeated upon suffering any Damage.

Kryptonian Protocol: Immune to the "Frightened" status.

HERO SHEETS

Bulwark (Marco Rivas)

A former firefighter with superhuman strength and durability, **Marco** was off duty, but ran into the danger zone to help with rescues, ignoring evacuation orders. **Red Tornado's** voice was the first authority that made sense in the middle of the chaos.

Origin: Meta-Human

Archetype: Champion of Tomorrow

Attributes: Potency +6, Accuracy +3, Agility +0, Resistance +5, Spirit +3, Mind +0 [25 PAX]

Powers: Super Strength G2 [6 PAX], Enhanced Resistance G1 [3 PAX]

Resolve: 18 [Increase -6 PAX]

Defense: 15

Attack: +1

Damage: 1d6 + 6

Damage Reduction: 1

Abilities: No One Gets Left Behind, Truth and Justice

Limitations: Code of Conduct [Protection], Weakness [Electricity]

Nexus (Alizee Sharma)

A technological vigilante who uses drones to fight for justice. She was using her drone network to create a real-time map of the Eradicators' dispersal, which was intercepted by **Red Tornado**, who recruited her to be his "eyes on the ground."

Origin: Human

Archetype: Genius

Attributes: Potency +0, Accuracy +3, Agility +3, Resistance +0, Spirit +3, Mind +6 [25 PAX]

Powers: Technology [Technological Spheres G2 - Functions: Tactical Analysis, Attack Mode] [8 PAX]

Knowledge: Tech [Free], Subterfuge [4PAX]

Traits: Reliable Contact [Free], Polyglot [3PAX]

Resolve: 15

Defense: 15

Attack: +4

Damage: 1d6

Abilities: Checkmate, Blabblalogy

Limitations: Overthinking, Code of Conduct [Never use technology for personal gain]

Not-Supergirl (Sofia Torres)

A photographer on her way to a costume party dressed as **Supergirl**, **Sofia** became trapped in the subway during the initial attack. It was there that she awakened her powers. In a panic, she unleashed a wave of energy that temporarily disabled the Eradicator attacking her train car, allowing everyone to escape—thinking she was the real Supergirl. The energy blast placed her on **Red Tornado's** radar.

Origin: Meta-Human

Archetype: Enraged

Attributes: Potency +0, Accuracy +6, Agility 0, Resistance +0, Spirit +6, Mind +0 (**20 PAX**)

Powers: Energy Blast G1 (**4 PAX**), Flight G1 (**3 PAX**), Force Field G1 (**3 PAX**)

Knowledge: Academic (**Journalism**) (**4 PAX**)

Trait: Catchphrase ("I'm Not Supergirl!") (**4 PAX**)

Resolve: 19

Defense: 15

Attack: +7

Damage: 1d6+6

Abilities: Chain-Breaker, Red With Rage

Limitations: Collateral Damage, Nullification (Once per Scene, Not-Supergirl needs to absorb energy from a source such as power lines, batteries, or electrical systems. Otherwise, her powers are nullified.)

Snapback

Snapback is Jonathan Long, a young hero who adopted a dark persona to attract followers on social media, and the strategy has been working. Combining martial arts with his elastic powers in impressive action videos, his accounts have already surpassed 100,000 followers.

His growing online presence caught the attention of Red Tornado, placing him on the Justice League's radar. When the Eradicators invaded Earth, Jonathan saw the crisis as a unique opportunity to prove himself and finally break into the superhero mainstream.

Origin: Meta-Human

Archetype: Dark Knight

Attributes: Potency +3, Accuracy +3, Agility +3, Resistance +3, Spirit +4, Mind 0 (**25 PAX**)

Powers: Elasticity G1 (5 Pax), Martial Master G1 (Free) (Martial Artist, Precise Strike)

Knowledge: Acrobatics (4 PAX)

Traits: Influencer (4 PAX)

Resolve: 17 (Increase- 2 PAX)

Defense: 17

Attack: +5

Damage: 1d6 +3

Abilities: I am the Night, Martial Training

Limitations: Feet on the Ground, Vulnerability (Losing Followers)
